

# R.F Exposure/Safety Calculation for MRU - WCS

The E.U.T. is rack or wall mounted. The typical distance between the E.U.T. and the general population is >100cm.

Calculation of Maximum Permissible Exposure (MPE)  
Based on Section 1.1310 Requirements

(a) FCC limit at 2355.0 MHz is:  $1 \frac{mW}{cm^2}$

Using table 1 of Section 1.1310 limit for general population/uncontrolled exposures, the above level is an average over 30 minutes.

(b) The power density produced by the E.U.T. is

$$S = \frac{P_t G_t}{4\pi R^2}$$

P<sub>t</sub>- Transmitted Peak Power (worst case)

G<sub>T</sub>- Antenna Gain, 12.5dBi= 17.8 numeric

R- Distance from Transmitter 100 cm

(c) Peak power density at worst case continuous transmission:

| Band | Modulation | Pt (dBm) | Pt (mW) | Antenna type | G <sub>T</sub> (dBi) | G <sub>T</sub> numeric | R (cm) | S <sub>AV</sub> (mW/cm <sup>2</sup> ) | Spec (mW/cm <sup>2</sup> ) |
|------|------------|----------|---------|--------------|----------------------|------------------------|--------|---------------------------------------|----------------------------|
| WCS  | GSM        | 35.2     | 3311    | External     | 12.5                 | 17.8                   | 100    | 0.468996                              | 1.0                        |
|      | LTE 64QAM  | 35.6     | 3631    | External     | 12.5                 | 17.8                   | 100    | 0.514324                              | 1.0                        |
|      | WCDMA      | 35.5     | 3548    | External     | 12.5                 | 17.8                   | 100    | 0.502567                              | 1.0                        |

(d) This is below the FCC limit.
