Re: Class II permissive change request

Bologna, February 14th, 2007

Dear Sir / Madam,

This communication is for a request of a CLASS II Permissive Change regarding FCC ID OMJ0015. This is in order to add the two new families of products that contain the radio module STARMODULE 910MHz .

The products are:

OM-3000 RF B/DUAL-C M-INT/RS485 910MHz : base charger with radio, RS485 and dual charger features
OM-3010 RF B/C M-INT 910MHz : light version of OM-3000. No RS455 and NO dual charger features

DRAGON M131 910MHZ : gun reader with standard laser and radio features
DRAGON M131/D 910MHZ : gun reader with display and standard laser and radio features
DRAGON M131/D LR 910MHZ : gun reader with display and long-range laser and radio features

Regarding the OM-30x0 products, we ask a CLASS II permissive change because they are not included in the previous certification that currently cover another type of base charger called OM-DRAGON. It is important to note that OM-DRAGON and OM-3000 use the same radio and the same antenna.

Regarding DRAGON Mxxxx, this differs from the previous certified DRAGON Mxxx by using a different antenna in combination with STARMODULE 910 radio.

Kind regards
R. Cacioppo
