

TX6U Operational Description:

The EUT complies with the 154.231(e) ten seconds minimum requirement. The Operational Description is marginal.

In addition, devices operated under the provisions of this paragraph shall be provided with a means for automatically limiting operation so that the duration of each transmission shall not be greater than one second and the silent period between transmissions shall be at least 30 times the duration of the transmission but in no case less than 10 seconds.

The function of the TX6U is to regularly measure its surrounding temperature at its point of location and transmit the data using wireless 433MHz to a stand alone receiving unit. The data would then be displayed on the receiving units LCD.
