Re: FCC grant for T20TX-0XSTL

Hereby Tele Radio AB confirms that the T20TX-STL transmitter is identical to the T60TX-STL transmitter, regarding the circuit board and the components, except for one thing, two dipswitches are not mounted on the T20TX-STL (see arrows pointing at pictures attached). These switches controls the setting of a private id code between the transmitter and receiver, and this feature don't exist on the T20 system.

What separates the two transmitters are the color of the cover and this is for marketing purposes.

Best regards
