

The objective of this document is to explain why an installation of the equipment needs to be carried out by professional personal only

1) Marketing

Due to the complexity of the RFID technology the equipment is not an of the shelf product as it is a part of a solution and therefore is not possible to sell it in retail.

2) Requires Professional Installation

- The installation will be controlled
- The installation will be carried out by specially trained personal to ensure the functionality
- The RF environment will be evaluated before installing the equipment in order to reach best performance.
- Due to the connection to PC systems a Software programming/Installation is required.

3) Application

The intended use of the RFID equipment is in mainly to optimise Logistic/ production processes but can also be used in unnamed other applications. However, it is generally for industrial/commercial use.
