FCC PART 15.Subpart H White Spaces System

Part 2 TEST REPORT

Fixed TVBD Device

Applicant	CARLSON WIRELESS TECHNOLOGIES INC.
Address	2700 FOSTER AVENUE ARCATA, CA 95521 USA
FCC ID	OPA-RC2-BS and OPA-RC2-CPE
Model Number	Rural Connect II Base and Rural Connect II Terminal
Product Description	WHITE SPACE FIXED TVBD
Date Sample Received	7/18/2013
Date Tested	7/18 – 19/ 2013
Tested By	MARIO R. DE ARANZETA
Approved By	MARIO R. DE ARANZETA
Report Number	1244UT13TestReport.docx
Test Results	<input checked="" type="checkbox"/> PASS <input type="checkbox"/> FAIL

THE ATTACHED REPORT SHALL NOT BE REPRODUCED EXCEPT IN FULL WITHOUT THE WRITTEN APPROVAL OF TIMCO ENGINEERING, INC.

Testing Certificate #0955-01

GENERAL REMARKS

The Carlson White Space radio system consist of a Base Station radio, a Terminal radio, each having its own FCC ID, and an internet or cloud based service called the Operation and Management Center (OMC) to manage the radios and interface with the Spectrum Bridge WSDB service. The information contained in this report represent the results of these components tested as a system.

The attached report shall not be reproduced except in full without the written permission of Timco Engineering Inc. The test results relate only to the items tested.

Summary

The device under test does:

- ☒ fulfill the general approval requirements as identified in this test report
☐ not fulfill the general approval requirements as identified in this test report

Attestations

The scope of this document is to report the results of the Fixed TVBD Part 2 Database Interface Certification tests.

There are three (3) components of the Carlson Wireless White Spaces technology;

- **TV Band Fixed Devices, a Base Station and a Terminal.**
- **TV Bands Database (Spectrum Bridge Certified White Space Database)**
- **TV Band System,** Made up of Fixed TVBD's, the Spectrum Bridge WSDB, and layer of interaction between the devices and the database called the Operation and Management Center or OMC.

To the best of my knowledge and belief, these tests were performed using the measurement procedures described in this report.

All instrumentation and accessories used to test products for compliance to the indicated standards are calibrated regularly in accordance with ISO 17025: 2005 requirements.

Testing Certificate # 0955-01

I attest that the necessary measurements were made by me or under my supervision, at:

Timco Engineering Inc.
849 NW State Road 45
Newberry, FL 32669

GENERAL INFORMATION

EUT1 Description

General:

The Rural Connect II Base is designed to provide rural broadband service.

EUT Specification:

Applicable Standard	Part 15 Subpart H TV Band White Space Fixed Device		
DUT Description	Transceiver		
FCC ID	OPA-RC2-BS		
Application:	Rural Broadband transmission		
Operating Frequency	473 to 599 MHz and 623 to 695 MHz		
Number of channels	14 to 35 and 39 to 51		
Transmit Power(dBm):	23		
DUT Power Source	<input type="checkbox"/> 110-120Vac/50- 60Hz		
	<input checked="" type="checkbox"/> DC Power 24V 2.5 A Globtek Inc., Model # GT-81081-6024-T3, Part # TR9C12500LCP-F		
	<input type="checkbox"/> Battery Operated Exclusively		
Test Item	<input type="checkbox"/> Prototype	<input type="checkbox"/> Pre-Production	<input checked="" type="checkbox"/> Production

Device and System Operation

This section provides high level description of the White Space test network configuration. For purposes of this procedure, the White Space device will be controlled via the OMC which will be accessed using a PC work station connected to the test setup network router, enabling a connection to the internet. In order to connect the work station to the OMC and EUT, the operator will have to pre-register and receive account credentials here <http://omc.neul.com/Account/SignIn> Additional OMC instructions can be found in the Operator Manual.

Test Network Configuration

The Carlson Rural Connect II transmits on a single preferred and available TV White Space channel in the UHF frequency band. The bench test network configuration is shown in Figure 1 above. The elements of the test setup are:

- EUT1 –RC2 – Base Station White Space Radio Serial # ec78963a-a8f0-4532-8e50-2d48c89f3b89
- EUT2 –RC2 – CPE White Space Radio Serial # f58457b8-ed1f-453d-8d7f-8c2418a34038
- NR – standard network router/switch
- WS – workstation (laptop computer) to access TVBD, the OMC, and record measurements
- SA – spectrum analyzer
- RF attenuators and cabling
- Spectrum Bridge White Space Database
- Operations and Management Center (OMC)

The workstation is physically connected to one of the network router LAN ports via RJ45 and establishes a network connection to the EUT and the internet. The routers WAN port connection is required to be capable of providing Internet access.

EUT1 is physically connected to the network router LAN port via its RJ45 network port. The network router provides IP addresses to the EUT. EUT1 is called the Base station and has direct connection to the internet. EUT2 (the CPE) is connected to EUT1 via a Coax link. EUT2 has no direct connection to the internet. EUT2 can have access to the internet only when the EUT1-EUT2 RF link is operating. All of the device/database tests were executed in normal operational mode. Configuration of EUT is accomplished using the OMC software.

As defined in the FCC's White Spaces Final Rules, the EUT only operates and is tested as Fixed TV Band Device. The EUT is enrolled in the WSDB prior to testing by a Spectrum Bridge representative. In addition, the EUT1 and EUT2 must be configured with registration information via the OMC to register with Spectrum Bridge WSDB. The firmware loaded in the EUT includes the ability to communicate with the OMC database interface agent that inter connects to the Spectrum Bridge White Space service.

An OMC entry for each EUT must be configured with complete registration information and will not transmit until it registers and receives a valid channel list. When power is applied and the radio establishes an Internet connection; the Base Station EUT/TVBD sends the OMC a signal prompting the OMC to send registration information to the database via the Internet. The WSDB verifies the TVBD and upon confirmation, registers the device. The OMC then requests a channel map for the EUT location. Upon receiving a list of available channels from the database the OMC will verify if the pre-configured channel is available before enabling transmission on the EUT.

§15.713(f)(3) Fixed TVBD Registration

a) Successful Registration, 15.713(f)(3) – Fixed TVBD with direct connection to Internet (Base Station)

Test procedure:

Configure the EUT with the required registration information. Verify the required registration information is sent and stored in the white space data base.

Successful registration should be verified by accessing the WSDB registration interface and also the EUT status information page.

Test pre-conditions:

The FCC ID and the serial # of the radio are programmed in the firmware of the radio and cannot be modified. The TVBD was configured as follows and the information submitted for registration to the WSDB.

OMC record:

b) Successful Registration, 15.713(f)(3) – Fixed TVBD without a direct connection to the internet(Subscriber)

Test procedure:

Configure the base station with the required registration information. Verify that the required registration information is sent and stored in the white space data base.

Operating channel should be verified on the subscriber (radio without the internet connection).

Test pre-conditions:

The Base station TVBD was configured and the information submitted for registration to the WSDB.

OMC record:

The OMC status page shown below confirms the successful registration of the subscriber. Operating Channel is 14. The transmitter did not turn ON until the database exchange was successfully completed.

Station Properties: CST00109

c) Unsuccessful Registration, 15.713(f)(3) – Restricted co-ordinates

Test Procedure:

Configure the EUT with restricted co-ordinates (Outside US Regulatory boundaries, example 31.5, -106.9).
Verify the required registration information is sent and stored in the white space data base.
Registration failure should be verified by accessing the WSDB registration interface and also the EUT GUI.

Test Pre-conditions:

A location outside US regulatory boundaries (31.5, -106.9) was entered into the radio and the information submitted for registration to the WSDB.

d) Unsuccessful Registration, 15.713(f)(3) – Invalid registration data (Missing FCC ID)

Test Procedure:

Configure the EUT with Incomplete Information (e.g. Missing FCC ID). Verify the required registration information is sent and stored in the white space data base.

Registration failure was verified by accessing the Operation and Management Center webpage (OMC) by opening a browser window on the workstation and typing the following in the URL field:

<http://omc.neul.com> (prior OMC registration is required).

Test Pre-conditions:

The 'FCC ID' Information field should be left blank.

OMC record:

i) Unsuccessful Registration, 15.713(f)(3) –Antenna Height AGL> 30m

Test Procedure:

Configure the EUT with such that AGL>30m. Verify the required registration information is sent and stored in the white space data base.

Registration failure should be verified by accessing the WSDB registration interface and also the EUT status web page.

Test Pre-conditions:

Antenna height = 31 m was entered into the radio and the information submitted for registration to the WSDB.

OMC record:

§15.707(a) Fixed TVBD Relocated

Confirm that the database will not provide a channel list for a Fixed TVBD at a location other than that registered.

Test Procedure:

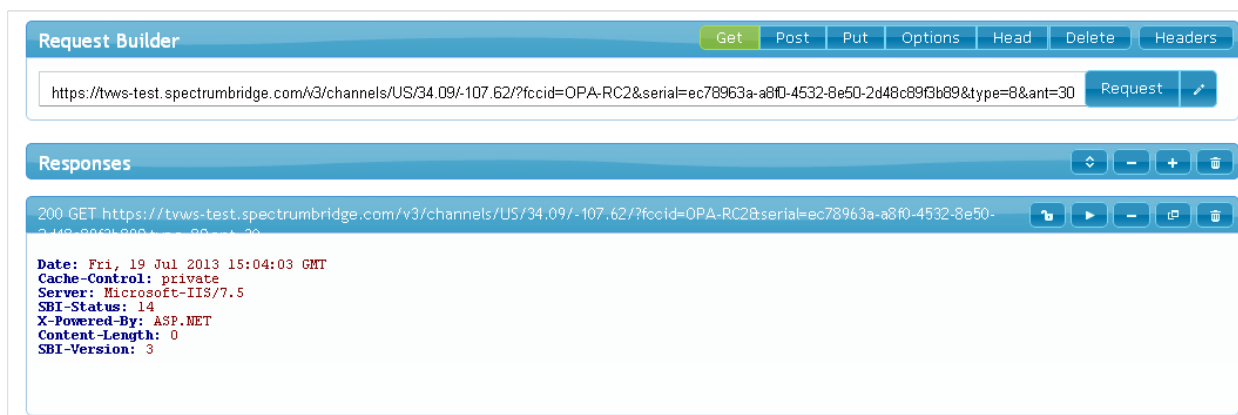

- ✓ Configure the fixed device with a location that will yield an authorized channel list. Verify proper channel operation using a spectrum analyzer and the device management interface.
- ✓ Reconfigure (change) the configured location of the fixed device. Power cycle the device.
- ✓ Verify that the fixed device receives a channel map request exception, and does not transmit using white space frequencies using a spectrum analyzer and the device management interface.

Test Data:

The radio is not capable of separating the registration and channel request commands, so a simulator was used to verify this test. Spectrum Bridge has worked with the radio vendor to implement and test the interface between the radio device and Spectrum Bridge's FCC certified TVWS database.

When the channel request is sent through the simulator with a location that is different than the registration location a channel list is not granted by the database and an error 14 code is sent. (Request Does Not Match Registration)

Simulator requesting a channel list on a location different from where it was registered:

The transmitter turned off. Spectrum analyzer was used to verify no transmission.

§15.711(b)(3)(iii) Fixed & Mode II TVDB Database Update

Test Procedure:

Using a programmable router or similar network device, block the access to the database URL or IP address from the TVBD. Confirm that the TVBD shuts down by 11:59 PM on the following day.

- ✓ Configure the fixed or Mode II device with a location that will yield an authorized channel list. Verify proper channel operation using a spectrum analyzer and the device management interface.
- ✓ Restrict the access to the database.
- ✓ Verify that the device does not transmit using white space frequencies after 11:59 PM the following day. Verify using a spectrum analyzer and the device management interface.

Test Results:

The device is designed to shut down 23 hours and 59 minutes after the last successful channel request if access to the database is blocked.

The device was initially powered up and it successfully registered with the database at approximately 12:22 PM. The device received a channel list and started transmitting on channel 14. The connection to the database was then blocked, while maintaining regular access to the internet.

§15.711(b)(3)(i)(ii), §15.713(a)(1) 48 Hour Channel Scheduling

Use the database interface to register protection for a low-power auxiliary device for the same location and channel on which the TVDB (EUT) has selected and is operating. The registered protection for the low-power auxiliary device should be scheduled for protection within the next 48 hour period.

Test Procedure:

- ✓ Configure the TVBD (EUT) such that it can access the database.
- ✓ Verify that EUT requests and receives a valid channel list. Verify the EUT is using an authorized channel using a spectrum analyzer and the device management interface.
- ✓ Use the database interface to register protection for a low-power auxiliary device for the same location and channel on which the TVDB (EUT) has selected and is operating. The registered protection for the low-power auxiliary device should be scheduled for protection within the next 48 hour period.
- ✓ Verify that the EUT requests and receives a new channel list at the scheduled time of the registered low-power channel protection is to take effect.
- ✓ Verify the new channel map does not contain the channel previously protected when the low-power auxiliary device was registered.
- ✓ Verify the EUT is operating on a different channel from what was previously used and subsequently reserved using a spectrum analyzer and the device management interface.

Test Data:

The EUT was registered and verified that a valid channel list was received.

The refresh time was verified in the channel response below. The channel list refresh time is indicated to be 48 Hours.

Operating Channel on 19 before an auxiliary device is registered.

Channel Availability after registration of Low Power Auxiliary Device

With the next channel request, the TVBD receives the updated channel list which excludes CH19 and the EUT ceases transmitting on channel 19. The EUT is designed to operate on only one pre-configurable channel.

APPLICANT. CARLSON WIRELESS TECHNOLOGIES INC.

FCC ID: OPA-RC2-BS

REPORT: \\SKYLINE\SHARE\JIM L\TVBD CERTIFICATION\CARLSON\1244UT13TESTREPORT JL (4).DOCX

Spectrum Plot: (no TX)

Channel list response with CH 19 missing:

```
<?xml version="1.0" encoding="utf-16"?>
<ChannelResponse xmlns:xsd="http://www.w3.org/2001/XMLSchema"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <ChannelCount>44</ChannelCount>

  <ChannelList>2,5,6,7,8,9,10,11,12,13,14,15,16,17,18,20,21,22,23,24,25,26,27,28,29,30,31</ChannelList>
  <RefreshIn>48</RefreshIn>
</ChannelResponse>
```

Results:

After receiving the updated channel listing the EUT ceases the transmission on channel 19, this was verified by observing the spectrum analyzer.

§15.707, §15.711(b)(3)(i)(ii)(iv),(c), §15.712 TVBD Channel Availability

Confirm that the channel list provided by the database conforms with those allowable to the class of TVBD under test. Confirm that the TVBD is operating on a channel from the list at authorized power and cannot be made to operate on an unauthorized channel.

Test Procedure:

- 1) Register the TVBD with valid location information.

Verify that the channel list provided by the WSDB conforms to the device type of the TVBD under test.

- ✓ Verify that EUT requests and receives a complete channel list using lat/long 33.62070/ - 100.32280. Verify the EUT is using an authorized channel using a spectrum analyzer and the OMC device management interface.

Test pre condition 1: The device channel request is tested according to fixed device type in this example.

2) All Device types

- ✓ Configure and register the devices location (34.078611, -107.61805) such that the database returns a channel list that does not allow operation on any channel.
- ✓ Use a spectrum analyzer to verify that the EUT does not transmit on any white space channel.
- ✓ Verify that the EUT does not transmit on any channel until it successfully registers and receives a channel list

Test Precondition 2:

A Registration request is sent for a location with no known available channels. Eg: (34.078611, -107.61805)
