Hi,

Sorry for the delay in getting the information to you, but here are the changes to the report.

There were a couple of typos on the report and they have been fixed. In reference to:

Question #1: I sent you the copy of the revised letter.

Question #2: I believe the part number for the maximum power out put should be Part 90.205.as noted in the report.

Question #3: There was an error in the signal used during the test for Measurement of Occupied Bandwidth the signal used was GSM and the report now has the correct information.

Question #4: The calculation for the carrier power used was 80W and that was a typo, with the changes made to the report.

Question #5: The instrument setting used to measure the Radiated Spurious Emissions was a HP Spectrum Analyzer in peak detection mode, and the report has been changed.

If you have any questions, please feel free to contact me at any time. Thank You,

Fred
