

We, Autec Srl, declare that:

the transmitting unit Model A08 Type LA0AM with its radio module AIRTR08LM may be configured to operate over the whole 902-928MHz band.

The specific used frequency band will be configured during the manufacturing process. Changes for any radio parameter are not allowed and are impossible by any third party because they are loaded only by a software tool that is Autec property. This software is loaded in the address key and radio keypad: for this reason one without the other is not operational.

According to a customers' request, Autec is going to configure this transmitting unit to operate at 915-928MHz band.

There are no hardware differences between the radio modules configured in 902-928MHz band and radio modules in 915-928MHz.
