Exhibit H

Description of Operation
Xanboo/Core Technologies
XHA750

The user inserts an electronic key that uniquely identifies him. The user then selects arming or unarming of the security system. By its nature, this product is unlikely to be used more than twice a day. The Home and Away unit sends a "Keep Live" 19 ms packet every 15 minutes. A ten second watchdog timer starts at each activation to prevent multiple transmissions even during multiple activations.
