RE: Xanboo/Core Technologies

FCC ID: OU4-XHA750

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) The cover letter mentions that a nominal data packet is 19.5 ms. It also mentions that an additional 5 msec may be added for encrypted PIN number for this device. The data only shows 18.5 msec. Additionally, please note that this may affect average results reported and should be corrected as well. It appears that the worse case average margin currently reported is 2.0 dB, while the difference due to duty cycle would be slightly more than this. Please review, provide worse case timing measurements, and correct the report as necessary.

Timothy R. Johnson
Examining Engineer
