RE: Xanboo/Core Technologies

FCC ID: OU4-XWS20T

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) It can not be determined if the RF TX portion of the device is a separate daughter board mounted in the product. If so, please provide top and bottom photographs of the RF board by itself and a photograph of the main board with the RF module removed.
- 2) This device appear to normally be mounted upright. Was it also tested in this position? The device should have been configured and investigated in the configuration.
- 3) Please explain worse case duty cycle transmissions. The test report appears to show 2 pulses in 44 seconds, while the information on page 5 states it transmits every 15 minutes. Please explain worse case duty cycle of this device.

Timothy R. Johnson
Examining Engineer
