IC Number: 4576A-XWS30W

In response to your comments regarding the application for certification of the devices referenced above please find our response below:

1) It can not be determined if the RF TX portion of the device is a separate daughter board mounted in the product. If so, please provide top and bottom photographs of the RF board by itself and a photograph of the main board with the RF module removed.

There is no separate daughter board. Everything is included on the single board in the photograph.

2) This device appear to normally be mounted upright. Was it also tested in this position? The device should have been configured and investigated in the configuration.

The device was tested in three orthogonal axes.

3) Please explain worse case duty cycle transmissions. Does only one packet get transmitted each time (i.e., one packet per 15 minutes)?

A letter is provided by the client.
