

TEST SETUP PHOTOGRAPHS

Figure 1. OATS- Fundamental measurement, Dipole (Antenna 1)

Note: OATS was only used for fundamental measurements. All other radiated emissions measurements were performed inside the semi-anechoic chamber.

Figure 2. OATS- Fundamental measurement, Patch (Antenna 2)

Note: OATS was only used for fundamental measurements. All other radiated emissions measurements were performed inside the semi-anechoic chamber.

Figure 3. Radiated Emissions, 30 MHz - 200 MHz

Note: Both Dipole and Patch Antenna testing used the same configuration

Figure 4. Radiated Emissions, 200 MHz - 1000 MHz

Note: Both Dipole and Patch Antenna testing used the same configuration
