

## TRX-310 Tune-Up Procedure

The following procedure is applied to tune this device into maximum power 22dBm +/-0.5dB

1. The computer sends data via CM (Cable Modem) and TRX-310 to operator's headend receiver.
2. The operator's headend equipment send data back to the computer via TRX-310 and CM
3. The computer asks the CM to increase the output power if it doesn't get data from the headend.
4. The maximum operating power is set as 22dBm, which is limited by the power amplifier when it is set as 22dBm output power
