Re: FCC ID: OUSCU150BTD - EA167075
Class II Permissive Change

December 17, 2009

Dear Mr. Bonilla,

There are many antenna and transmission line combinations that are used by LPTV broadcasters, depending upon specific site conditions, the licensed coverage contour, and other individual license requirements. Each system is designed by the licensee, typically through the assistance of a consulting engineer. The responsibility for meeting ERP requirements lies fully with each licensee. Axcera is type certifying the transmitter only.

Sincerely,

A handwritten signature in black ink, appearing to read "James C. Mounts".

James C. Mounts
Associate Engineer
