

Re: Class 2 change request  
Applicant: Kyocera Wireless Corp  
FCC ID: OVFKWC-5135

To AmericanTCB

We would like to apply Class 2 Permissive change on our wireless handset 5135. The difference with the S14 phone while compared to the 5135 model is the digital chip set as follows.

- Changed MSM3100 to MSM5105
- Changed the memory from 16 x 4 Mb to 32 x 8 Mb

These are drop-in changes. The layout change is not required. There is no change to the basic frequency determining and stabilizing circuitry, modulation scheme and output power.

With the above changes, the radiated emission test and SAR test were re-performed to confirm the compliance of S14 for the related FCC requirements. The reports have been uploaded via AmericanTCB Electronic Filing Site.

Regards,
