Dear Thuyt,

The application has been reviewed, but there are two minor issued which need to be addressed.

1. A comparison is made in the current application with service option SO3. Previous applications referenced SO2 only. Please provide additional information for the application file to explain the change with reference to options and modes previously tested.

2. The power levels entered on the application form are different from the power levels on the grant previously. Since there has been no hardware change, the power levels would presumably remain the same. Please correct them or explain and provide additional support information.

Thank you and best regards,

Tim Dwyer
CCS Technical Reviewer

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.

subject Re: Kyocera Wireless Corp. , FCC ID: OVFKWC-K24, Assessment NO.: AN07T6478, Notice#1

Dear Tim,

1. We used service option SO3 because SO3 is an EVRC speech service option similar to 4GV, whereas SO2 is a loopback service option. To determine the worst-case results we compared SO3 and SO2. It can be seen from the attached document that SO2 resulted a higher power than SO3, which is highlighted in blue, and thus the previous application reported SO2 as the worst-case result. Nevertheless, setting at either configuration the peak and average powers are equal or close to each other. Therefore, testing at either of the service options will yield similar results.

2. I have attached the grant for OVFKWC-K24 to show that the power levels are the same as what I have entered on the application. There are no hardware change and thus the power levels remained the same.

I trust the above information have clarified the issues that you have addressed.

Sincerely,
Thuy To
Regulatory Engineer
Kyocera Wireless Corp.

Dear Thuy,

Your reply to item 1 is what is needed.

Item 2 was an error on my part. Please accept my apology for any inconvenience. Due to the way the FCC search returns results, I was looking at the grant for the K24B which shows slightly lower power. K24B is returned when you search for K24. Please disregard.

So this is complete and I forward it for certification shortly.

Thank you and best regards,

Tim Dwyer
CCS Technical reviewer.
