

Test Report

From

Kyocera Wireless Corp

Dual-Band Tri-mode AMPS/CDMA Cellular Phone

FCC Part 22 & 24 Certification IC RSS-129 & 133	
FCC ID:	OVFKWC-KX1
Model:	KX1

STATEMENT OF CERTIFICATION

The data, data evaluation and equipment configuration represented herein are a true and accurate representation of the measurements of the sample's radio frequency interference emissions characteristics as of the dates and at the times of the test under the conditions herein specified.

Test performed by:	Kyocera Wireless Corp 10300 Campus Point Drive CA 92121
--------------------	---

Report Prepared by:	Lin Lu Engineer, Principal
---------------------	-------------------------------

Tests that required an OATS site were performed by TUV Product Services.

1 General Information

Applicant:	Kyocera Wireless Corp 10300 Campus Point Drive San Diego CA 92121			
FCC ID:	OVFKWC-KX1			
Product:	Dual-Band Tri-mode Cellular Phone			
Model Number:	KX1			
EUT Serial Number:	6W-X----0VX41S			
Type:	<input type="checkbox"/> Prototype, <input checked="" type="checkbox"/> Pre-Production, <input type="checkbox"/> Production			
Device Category:	Portable			
RF Exposure Environment:	General Population / Uncontrolled			
Antenna:	Fixed Stubby			
Detachable Antenna:	Yes			
External Input:	Audio/Digital Data			
Quantity:	Quantity production is planned			
FCC Rule Parts:	§22H	§22H	§22.901(d)	§24E
Modes:	800 AMPS	800 CDMA	800 CDMA1X	1900 CDMA
Multiple Access Scheme:	FDMA	CDMA	CDMA	CDMA
TX Frequency (MHz):	824 - 849	824 – 849	824 – 849	1850 - 1910
Emission Designators:	40K0F8W, 40K0F1D, 1M25F9W			
Max. Output Power (W)	0.341 ERP	0.318 ERP		0.418 EIRP

2 Product Description

The phone model KX1 is a Tri-mode Dual-Band 1XRTT product that integrates Assisted GPS capability to meet the emergency location requirements of the FCC's E911 Phase II mandate. The Tri-mode architecture is defined as 1900MHz (PCS CDMA), 800MHz (cellular CDMA and AMPS).

The phone is designed in compliance with the technical specifications for compatibility of mobile and base stations in the Cellular Radio telephone service contained in "Cellular System Mobile Station - Land Station Compatibility Specification" as specified in OET Bulletin 53 and TIA Standards

The phone will support certain CDMA2000 radio-configurations (RC) as describes in Exhibit 1 (operation description).

3 Electronic Serial Numbers (ESN) Protection

The Trimode Phone, FCC ID: OVFKWC-KX1 uses ESN. The ESN is a unique identification number to each phone, which is contained in the Numeric Assignment Module and is automatically transmitted to the base station whenever a call is placed. The ESN is stored in an EPROM and is isolated from fraudulent contact and tampering. Any attempt to change the ESN will render the portable phone inoperative.

The phone complies with all requirements for ESN under Part 22.919.

4 FCC Compliance Emergency 911

FCC § 22.921

When an emergency 911 call is originated by the user, the mobile will attempt to acquire any available system and originate the emergency call on that system, disregarding restrictions set by the roaming list. The FCC NPRM WT99-13, CC94-102 automatic analog A/B roaming option has been implemented for 911 emergency calls. Note that the KX1 has Global Positioning System (GPS) support.

5 TTY compliance

FCC § 255 of the Telecom Act

KX1 has been designed for TTY Compliance with Cellular Compatibility Standard.

6 Transmitter RF Power Output

6.1 Conducted Power

FCC: § 2.1046

IC: RSS-129 §7.1, RSS-133 §6.2

Measurement Procedures:

The RF output power was measured using a Giga-tronics 8541C Universal Power Meter and HP 8594E Spectrum Analyzer that has the CDMA personality option. Terminated to a resistive coaxial load of 50 ohms.

Mode	Frequency (MHz)	Channel	Power (dBm)
AMPS	824.04	991	25.05
	836.49	383	25.04
	848.97	799	25.06
CDMA 800	824.70	1013	25.02
	836.52	384	25.01
	848.31	777	25.05
CDMA 1900	1851.25	25	23.17
	1880.00	600	23.13
	1908.75	1175	23.12

6.2 Radiated Power

FCC: § 22.913, § 24.232	IC: RSS-129 §7.1 and §9.1, RSS-133 §6.2
--------------------------------	--

Measurement Procedures:

The EUT was positioned on a 2-axis non-conductive positioner inside an anechoic chamber.

The EUT conducted power was set by the phone control software. During tests, the phone was rotated 360 degree in azimuth and elevation by an automated antenna measurement workstation. Maximum radiated power was recorded using a Giga-tronics 8541C Universal Power Meter. All measurement results are EIRP in dBm. For ERP, subtract 2.1 dB from the EIRP data.

Anechonic Chamber

Mode	Frequency (MHz)	Channel	Max. Power (dBm)	Ref.
AMPS	824.04	991	24.59	ERP
	836.49	383	24.35	
	848.97	799	25.33	
CDMA 800	824.70	1013	24.36	ERP
	836.52	384	24.39	
	848.31	777	25.02	
CDMA 1900	1851.25	25	25.63	EIRP
	1880.00	600	26.13	
	1908.75	1175	26.21	

7 Transmitter Modulation Requirement

7.1 Transmitter Audio Frequency Response

FCC: § 2.1047, § 22.915	IC: RSS-129 §6.2
Measurement Procedures:	
Measured with HP8920 RF communication test set & HP 3588A spectrum analyzer.	
<ul style="list-style-type: none"> Operate the transmitter with the compressor disabled, and monitor the output with HP8920 test receiver without de-emphasis. Apply a sine wave audio input to the transmitter external audio input port, vary the modulating frequency from 100 to 3000 Hz, and observe the input levels necessary to maintain a constant ± 2.9 kHz system deviation. Adjust the audio input level to 20 dB greater than that required to produce ± 8 kHz deviation with 1 kHz tone. Vary the modulation frequency from 3 kHz to 30 kHz and observe the deviation while maintaining a constant audio input level. Use the audio spectrum analyzer to measure the output deviation at the same frequency as the input signal. 	

Figure 7.1 Audio Filter Characteristics (300-3000Hz)

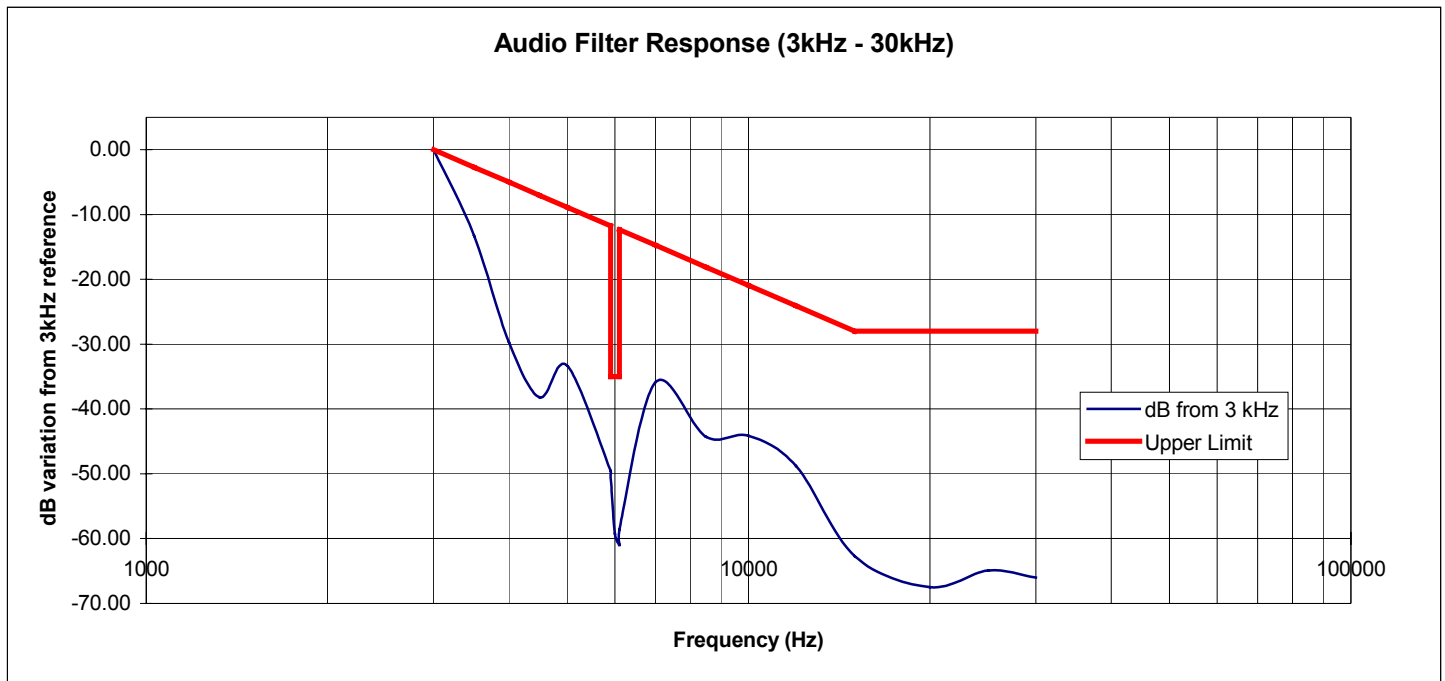

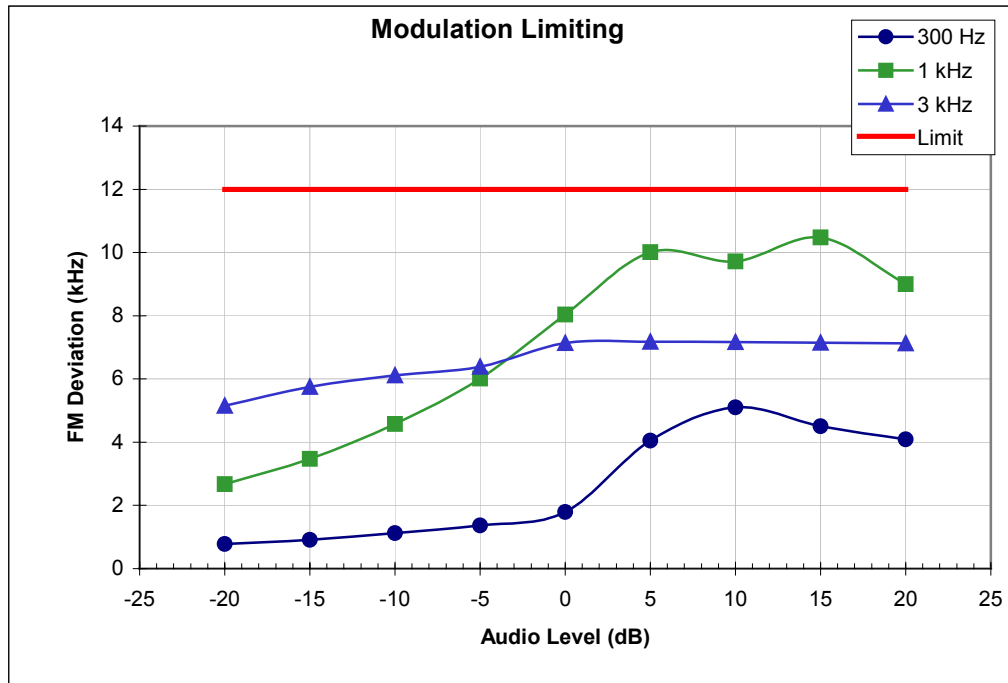

Figure 7.2 Post Limiter Filter Attenuation

7.2 Transmitter Modulation Deviation Limiting

FCC: § 2.1047(b), § 22.915(b)(c)	IC: RSS-129 §6.1
Measurement Procedures:	
Measured with HP8920 RF communication test set as an audio signal generator.	
With the compressor enabled and the SAT disabled, and at three different modulating frequencies (300Hz, 1kHz and 3kHz), adjust the audio input level from -20 dB to +20 dB in reference to the level required to generate 8kHz deviation at 1KHz.	

Figure 7.3 Modulation Deviation Limiting

8 Occupied Bandwidth

FCC: § 2.1049, § 22.917(b)(d), § 24.238	IC: RSS-129 §6.3, §8.1
Measurement Procedures:	
<p>The RF output of the EUT was connected to the input of the spectrum analyzer with sufficient attenuation. The spectrum with no modulation was recorded.</p> <p><u>For Analog:</u> The audio input signal was adjusted to as followings: (1) For combined voice and SAT, disable the compressor, modulate with a 2500 Hz sine wave 13.5 dB greater than that required to produce ± 8 kHz peak deviation at 1000 Hz and a 6000 Hz SAT with ± 2.0 kHz peak deviation. (2) For combined Signaling Tone and SAT, modulate with a 10 kHz ST with ± 8 kHz peak deviation and a 6000 Hz SAT with ± 2.0 kHz peak deviation. (3) For wideband data, modulate with a quasi-random 10 kbps data pattern with ± 8 kHz peak deviation. (4) For voice only, disable the compressor, modulate with a 2500 Hz sine wave 13.5 dB greater than that required to produce ± 8 kHz peak deviation at 1000 Hz. (5) For SAT only, modulate with a 6000 Hz SAT with ± 2.0 kHz peak deviation. (6) For ST only, modulate with a 10 kHz ST with ± 8 kHz peak deviation. (7) For combined SAT and DTMF, modulate with a 6000 Hz SAT with ± 2.0 kHz peak deviation and one of the DTMF tones. All measurements were performed on middle channel.</p> <p><u>For Digital:</u> Modulate with full rate.</p>

9 Spurious Emissions At Antenna Terminals

FCC: § 2.1051, § 22.917(e)(f), § 24.238	IC: RSS-129 §6.3, §8.1, RSS-133 §6.3
Measurement Procedures:	
<p><u>Out of Band:</u> The RF output of the EUT was connected to the input of the spectrum analyzer with sufficient attenuation. The modulating signal was applied accordingly. The frequency spectrum was investigated from the lowest frequency signal generated up to at least the tenth harmonic of the fundamental.</p> <p><u>Base Band:</u> Spectrum was investigated from 869-894 MHz for Cellular.</p>	

List of Figures:

Figure	Mode	Channel	Plot Description
9-1	AMPS	991	Emissions in base station frequency range, 869 - 894 MHz
9-2			Conducted spurious emissions, 9kHz to 10GHz

10 Transmitter Radiated Spurious Emissions Measured Data

FCC: § 2.1053, § 22.91, § 24.238	IC: RSS-129 §8.1, RSS-133 §6.3
Measurement Procedures:	
The radiated spurious emission test was performed at TUV in San Diego, California. The test report is attached in a separate attachment.	

11 Receiver Spurious Emissions

FCC: § 15.109	IC: RSS-129 §10, RSS-133 §9
Measurement Procedures:	
The receiver radiated spurious emission test was performed at TUV in San Diego, California. The test report is attached in a separate attachment.	

Note –

This product is a clam shell phone. There are two industry designs on the top half, named KX1 ID1 and KX1 ID2 (See pictures below).

The KX1 ID1 has removable housings, i.e., 'Feng' and 'Shui'. Those two housings are made from the same material, kept the same dimensions, just has different pattern on the surface. Therefore, there is no any difference on all of electrical performance between those two housings. All of conducted testing, radiated spurs and emission testing have been only conducted on KX1 ID 1 'Feng' and the results have been reported in a separate attachment.

The only difference between KX1 ID1 and ID2 is the oritation of the sub-LCD shown on the picture below. The schematic and main board layout are same. The electrical conducted performance shall be indential between ID1 and ID2. The radiated spurs and emission test have been re-performed for ID2 to insure a compliance with FCC requirement. The results are reported in a separate attachment.

ID1 'Feng'

ID2

ID1 'Shui'

12 Transmitter RF Carrier Frequency Stability

FCC: § 2.1055, § 22.355, § 24.235	IC: RSS-129 §7.2 and §9.2, RSS-133 §7
Measurement Procedures:	
The EUT was placed in an environmental chamber. The RF output of the EUT was connected to Agilent 8960 Series 10 E5515C. A power supplier was connected as primary voltage supply.	

12.1 AMPS Mode

Tx Frequency: 836.49 MHz	Voltage : 3.7V
Tolerance: +/- 2.5 Ppm (+/- 2091 Hz)	Ch: 383

Temperature (°C)	Deviation of Carrier (Hz)			Specification (Hz)	
	3.2V (Battery endpoint)	3.7V	4.26V (115%)	Lower limit	Upper limit
