RE: FCC ID: OW5BST801
Attention: Kathy Grzovic

I have a few comments on this Application.

1. The label states the maximum antenna gain that can be used is 13dBi. The test report says the maximum antenna tested was 5.6dBi. Documentation needs to be consistent. Please clarify
2. The Manual states that 40 cm separation needs to be kept from all persons. The calculation of the 5.6 dBi antenna comes to 44cm minimum separation. Also, using the 13dBi gain listed on the label the minimum distance would have to be 70 cm. Please revise the documentation to list the actual MPE using the maximum antenna for this system. Please correct the documentation and or test report to reflect this situation.
