RE: FCC ID: OWDTR-0022-E\_ATCB001955

Attention: Kathy Grzovic

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that 2.1043 states that changes in the modulating circuitry is grounds for a new ID. The reason for change mentions an external modulator. This appears to possibly be a change in the modulation circuitry. Is this a PC2 or a new ID application? Please explain.

Response: This is a Class 2 Permissive Change request. 2.1043 states that the "basic modulator circuit" is grounds for a new FCC ID. In the case of this request, the basic modulator circuit has not been changed (DSP IC901); it is the same physical hardware as that in the original certification. The change involves a new baseband input to the existing modulator circuit (please see the block diagram and change description uploaded on 11/24/2004).

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the sender.
