

June 8, 2007

M/A-COM, Inc. hereby requests that our grants for OWDTR-0048-E and OWDTR-0050-E list frequencies outside of FCC allocated Part 90 frequencies per FCC 2.807(d). The reason for this request is that M/A-COM, Inc. has United States government and military customers that require use of these frequencies.

M/A-COM, Inc. ensures that users other than the United States government and military do not have access to the frequencies outside of the Part 90 allocated frequencies by the following means:

Each portable, mobile and base station is configured to specific allocations in our factory prior to shipment to field locations through the use of special and controlled software configuration tools. These software tools are available to M/A-COM and company authorized dealers only. In either case, the requisite rule knowledge and configuration information is available to those configuration personnel.
