Harris seeks application approval for a Class 2 Permissive Change on the M7300 UHF-L mobile radio.

This change adds a motorcycle mount accessory, and an emission designator for P25 Phase 2 operation.

The motorcycle mount addition uses a 0 dB antenna, as previously certified, and the radio conducted power is reduced in this application to allow for motorcycle operator to radiating element separation distance of 50 cm.

Additionally, a P25 Phase 2 emission designator (8K10DXW) is being added as a result of the marketplace evolving deployment of Phase 2 capabilities. Conducted power remains the same, as well as PCB artwork and the radio enclosure; no increased gain antennas have been added, so MPE remains the same as for mobile applications.

Thank you for your kind consideration and timely review of this certification enhancement.

Sincerely,

A handwritten signature in black ink that reads "Daryl S. Popowitch". The signature is written in a cursive, flowing style.
