Test Sample Revision No.s	Hardware	n/a	Firmware	P02A10	
Transmit Frequency Range(s)	FCC	406.1 – 470.0 MHz			
	IC	406.1 – 430.0; 450.0 – 470.0 MHz			
Manufacturer's Rated Output Power	5.0 W (5.3 W max.)				
Co-located Transmitter(s)	Bluetooth (Class 2)	Output Power: 1.0 mW	Freq. Range: 2402-2480 MHz		
Antenna Type(s) Tested	See manufacturer's accessory listing (Section 5.0)				
Battery Type(s) Tested	See manufacturer's accessory listing (Section 5.0)				
Body-worn Accessories Tested	See manufacturer's accessory listing (Section 5.0)				
Audio Accessories Tested	See manufacturer's accessory listing (Section 5.0)				
Max. SAR Level(s) Evaluated	Head (FCC)	1.94 W/kg	1g	50% PTT duty factor	Occupational / Controlled Exposure
	Head (IC)	2.10 W/kg	1g	50% PTT duty factor	Occupational / Controlled Exposure
	Body-worn	5.13 W/kg	1g	50% PTT duty factor	Occupational / Controlled Exposure
FCC/IC Spatial Peak SAR Limit	Head/Body	8.0 W/kg	1g	50% PTT duty factor	Occupational / Controlled Exposure
<p>Celltech Labs Inc. declares under its sole responsibility that this wireless portable device has demonstrated compliance with the Specific Absorption Rate (SAR) RF exposure requirements specified in FCC 47 CFR §2.1093 and Health Canada Safety Code 6 for the Occupational / Controlled Exposure environment. The device was tested in accordance with the measurement procedures specified in FCC OET Bulletin 65, Supplement C (Edition 01-01), Industry Canada RSS-102 Issue 5, IEEE Standard 1528-2013 and IEC International Standard 62209-2:2010. All measurements were performed in accordance with the SAR system manufacturer recommendations.</p> <p>I attest to the accuracy of data. All measurements were performed by me or were made under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.</p> <p>This test report shall not be reproduced partially, or in full, without the prior written approval of Celltech Labs Inc.</p> <p>The results and statements contained in this report pertain only to the device(s) evaluated.</p>

## 1.0 INTRODUCTION

This measurement report demonstrates that the HARRIS Corporation XG-25P UHF-L Portable PTT Radio Transceiver with Bluetooth complies with the SAR (Specific Absorption Rate) RF exposure requirements specified in FCC 47 CFR §2.1093 (see reference [1]) and Health Canada's Safety Code 6 (see reference [2]) for the Occupational / Controlled Exposure environment. The measurement procedures described in FCC OET Bulletin 65, Supplement C 01-01 (see reference [3]), IC RSS-102 Issue 4 (see reference [4]), IEEE Standard 1528-2003 (see reference [5]) and IEC 62209-2:2010 (see reference [6]) were employed. A description of the device, operating configuration, detailed summary of the test results, methodology and procedures used in the evaluation, equipment used and the various provisions of the rules are included within this test report.

I have reviewed the changes proposed for this new filing and have determined that these changes will not impact the SAR magnitude or distribution indicated on the original report S/N 052813OWD-1235SAR, Revision 1.0 for the original FCC ID: OWDTR-0109-E. The replacement Blue-Tooth module exhibits a lower output power than the original device and is in the same physical location. This report reflects test data and measurement procedures dated June 2013. Although there have been newer releases of the test standards, I have reviewed those changes and revisions in the standards and have determined that they would not impact the measurement procedures undertaken or the SAR results as originally reported during the initial evaluation. As such, the latest releases of those standards have been cited in this report. Additionally, SAR was evaluated on this device on October 14<sup>th</sup>, 2016 to the worst case configuration for the addition of the GPS module. The measured SAR was less than the highest reported SAR indicated in this report.

I attest that the data reported herein is true and accurate within the tolerance of the Measurement Instrument Uncertainty; that all tests and measurements were performed in accordance with accepted practices or procedures. The results of this investigation are based solely on the test sample(s) provided by the client which were not adjusted, modified or altered in any manner whatsoever, except as required to carry out specific tests or measurements. This test report has been completed in accordance with ISO/IEC 17025.

Art Voss, P.Eng.  
Technical Manager

## 2.0 SAR MEASUREMENT SYSTEM

Celltech Labs Inc. SAR measurement facility utilizes the Dosimetric Assessment System (DASY™) manufactured by Schmid & Partner Engineering AG (SPEAG™) of Zurich, Switzerland. The DASY4 measurement system is comprised of the measurement server, robot controller, computer, near-field probe, probe alignment sensor, specific anthropomorphic mannequin (SAM) phantom, and various planar phantoms for head and/or body SAR evaluations. The robot is a six-axis industrial robot performing precise movements to position the probe to the location (points) of maximum electromagnetic field (EMF). A cell controller system contains the power supply, robot controller, teach pendant (Joystick), and remote control, is used to drive the robot motors. The Staubli robot is connected to the cell controller to allow software manipulation of the robot. A data acquisition electronic (DAE) circuit performs the signal amplification, signal multiplexing, AD-conversion, offset measurements, mechanical surface detection, collision detection, etc. is connected to the Electro-optical coupler (EOC). The EOC performs the conversion from the optical into digital electric signal of the DAE and transfers data to the DASY4 measurement server. The DAE4 utilizes a highly sensitive electrometer-grade preamplifier with auto-zeroing, a channel and gain-switching multiplexer, a fast 16-bit AD-converter and a command decoder and control logic unit. Transmission to the DASY4 measurement server is accomplished through an optical downlink for data and status information and an optical uplink for commands and clock lines. The mechanical probe-mounting device includes two different sensor systems for frontal and sidewise probe contacts. The sensor systems are also used for mechanical surface detection and probe collision detection. The robot uses a controller with a built in VME-bus computer.

### 3.0 RF CONDUCTED OUTPUT POWER MEASUREMENTS

MEASURED RF CONDUCTED OUTPUT POWER LEVELS						
Test Freq.	Mode	System Radio		Scan Radio		Method
		Watts	dBm	Watts	dBm	
388	CW	5.25	37.2	5.20	37.2	Average Conducted
408		5.06	37.0	5.17	37.1	
418		5.01	37.0	5.07	37.1	
428		5.01	37.0	5.09	37.1	
443		4.80	36.8	4.92	36.9	
458		4.93	36.9	4.97	37.0	
470		5.14	37.1	5.20	37.2	
<b>Notes</b>						
1. The test channels were selected in accordance with the procedures specified in FCC KDB 447498 (see reference [8]).						
2. The RF conducted output power levels of the DUT were measured by Celltech Labs prior to the SAR evaluations using a Gigatronics 8652A Universal Power Meter at the external antenna connector of the radio in accordance with requirements of FCC 47 CFR §2.1046 (see reference [13]) and IC RSS-Gen (see reference [14]).						

### 4.0 NO. OF TEST CHANNELS ( $N_c$ )

Antenna Part No.	Antenna Type	Antenna Freq. Range	$N_c$	Test Frequencies (MHz)
1 KRE 101 1219/10	Helical Stub	403 - 430 MHz	3	408, 418, 428
2 KRE 101 1219/12	Helical Stub	440 - 470 MHz	3	443, 458, 470
3 KRE 101 1223/10	Helical Stub	378 - 430 MHz	3	408, 418, 428
4 KRE 101 1223/12	Helical Stub	440 - 470 MHz	3	443, 458, 470
5 KRE 101 1219/9	Helical Stub	378 - 403 MHz	1	388
Note: The number of test channels ( $N_c$ ) were calculated in accordance with the procedures specified in FCC KDB 447498 (see reference [8]).

## 5.0 MANUFACTURER'S DISCLOSED ACCESSORY LISTING

ACCESSORY CATEGORY: ANTENNA			
Accessory ID # for Test Report	Part Number	Description	SAR Evaluation
1	KRE 101 1219/10	Helical Stub (403-430 MHz)	Yes
2	KRE 101 1219/12	Helical Stub (440-470 MHz)	Yes
3	KRE 101 1223/10	¼-wave Whip (378-430 MHz)	Yes
4	KRE 101 1223/12	¼-wave Whip (440-470 MHz)	Yes
5	KRE 101 1219/9	Helical Stub (378-403 MHz)	Yes
ACCESSORY CATEGORY: BATTERY			
Accessory ID # for Test Report	Part Number	Description	SAR Evaluation
a	BT-023406-003	Ni-MH, immersible, non-IS, 7.5V, 2400mAh	Yes
b	BT-023406-004	Ni-MH, immersible, <IS> (7.5V, 2400mAh)	Yes
c	BT-023406-005	Li-ion, immersible, non-IS (7.4V, 2000mAh)	Yes
d	BT-023436-001	Lithium-polymer, immersible, non-IS (7.4V, 3000mAh)	Yes
ACCESSORY CATEGORY: BODY-WORN			
Accessory ID # for Test Report	Part Number	Description	SAR Evaluation
1	14011-0012-01	Kit containing: 14011-0011-01 BEE Nylon case (Black) (with radio retaining strap) & CC-014527 BEE Leather Belt Loop	Yes
2	14011-0012-02	Kit containing: 14011-0011-02 BEE Nylon case (Orange) (with radio retaining strap) & CC-014527 BEE Leather Belt Loop	No <sup>1</sup>
3	14011-0012-03	Kit contains: 14011-0011-03 BEE Leather Case (with radio retaining strap) w/o Shoulder Strap D-rings, FM-017262-001 Swivel Mount & CC-014527 BEE Leather Belt Loop	Yes
4	14011-0012-04	Kit contains: 14011-0011-04 BEE Leather Case with Shoulder Strap D-rings (with radio retaining strap), FM-017262-001 Swivel Mount & CC-014524-001 BEE Shoulder Strap	Yes
5	CC23894	Metal Belt Clip (Standard)	Yes
6	FM-017262-001 CC-014527	Swivel Mount Belt Loop, Leather (BEE)	Yes
7	CC-014524-002	[BEE] Short Leather Retaining Strap (For use with shoulder strap application)	No <sup>2</sup>
8	KRY1011609/1 FM-017262-001	Merzon belt loop D-swivel	No <sup>3</sup>
9	14011-0011-01 KRY1011609/1	BEE Black nylon case Merzon belt loop	No <sup>3</sup>
10	14011-0011-02 KRY1011609/1	BEE Orange nylon case Merzon belt loop	No <sup>3</sup>
11	14011-0011-03 KRY1011609/1 FM-017262-001	BEE leather case Merzon belt loop D-swivel	No <sup>3</sup>

Note:

- 1) The orange nylon case differs only in color from the black nylon case and therefore was not tested.
- 2) The Short retaining strap has no impact on SAR compared to the regular long strap and therefore was not tested.
- 3) The alternate Merzon Belt-loop is similar in construction to the standard belt-loop, therefore it was not tested.

Test Procedures in accordance with FCC KDB 643646 (see reference [9])
1. For face-held configuration, battery "d" was selected as the default battery (highest mAh).
2. When the head SAR of an antenna tested on the highest output power channel with the default battery is $\leq 3.5$ W/kg, testing of all other required channels is not necessary.
3. When the SAR for all antennas tested using the default battery is $\leq 4.0$ W/kg, test additional batteries using the antenna and channel configuration that resulted in the highest SAR among all antennas.
4. When test reduction applies, the data table entries for such configurations are denoted with N/A (Not Applicable).

**Test Procedures applied in accordance with FCC KDB 643646 (see reference [9])**

1. For Body-worn configuration, battery "d" was selected as the default battery\*.
2. When the body SAR of an antenna is  $\leq 3.5$  W/kg, testing of all other required channels is not necessary for that antenna.
3. When the body SAR of an antenna is  $>4.0$  W/kg, test adjacent channels.
3. When the SAR for all antennas tested using the default battery is  $\leq 6.0$  W/kg, test additional batteries using the antenna and channel configuration that resulted in the highest SAR among all antennas.
4. The audio accessory G8a was selected as the default audio accessory based on preliminary evaluations.
5. When test reduction applies, the data table entries for such configurations are denoted with N/A (Not Applicable).

## 8.0 SAR SCALING (TUNE-UP TOLERANCE)

### SCALING OF MAXIMUM SAR LEVELS TO MANUFACTURER'S TUNE-UP TOLERANCE SPECIFICATION

Test Config.	Test Freq. (MHz)	Antenna	Battery	Body-worn Accessory ID #	Cond. Power	Drift	SAR Level 1g (50% PTT d/f)		Scaling up to Manuf. Upper Tol. Power Spec.	Scaled SAR (50% PTT d/f) 1g (W/kg)
					Watts	dB	W/kg	Plot #		
<b>FCC</b> (scaled without drift)										
Face-Held	470	2	a	N/A	5.14	-0.342	1.90	F5	+0.1 dB	<b>1.94</b>
Body-worn	443	4	a	5	4.8	-0.187	4.68	A7	+0.4 dB	<b>5.13</b>
<b>IC</b> (scaled with drift)										
Face-Held	470	2	a	N/A	5.14	-0.342	1.90	F5	+0.1 dB	<b>2.10</b>

Notes:

1. Only the highest SAR values for face and body per frequency band are scaled.
2. The resulting value is the reported SAR.
3. The scaled SAR levels are below the FCC/IC Occupational SAR Limit of 8.0 W/kg.
4. Body-worn SAR is the same for FCC and IC, as the drift is less than 5% so the resulting SAR value does not need to be scaled with the drift.

## 9.0 SIMULTANEOUS TRANSMISSION ASSESSMENT

Co-transmitting Antennas: External UHF (378-470 MHz) and Internal Bluetooth (2402-2480 MHz)  
 Manuf. Rated Output Power: 1 mW (Bluetooth)  
 Antenna-to-Antenna Distance: 46.4 mm

MAX. SAR - UHF-BAND PTT (50% PTT duty factor)		MAX. SAR (BLUETOOTH)	SUM OF SAR LEVELS (50% PTT duty factor)	FCC/IC SAR LIMIT (Occupational)
Body-worn	5.13 W/kg (1g)	0.013 W/kg (1g) (Estimated SAR)	5.14 W/kg (1g)	8.0 W/kg (1g)

Simultaneous transmission of the UHF band and Bluetooth was assessed in accordance with the procedures specified in FCC KDB 447498 (see reference [8]). The sum of the highest measured UHF SAR and the estimated Bluetooth SAR are below the limit.

## 10.0 SAR PROBE CALIBRATION & MEASUREMENT FREQUENCIES

The following procedures are recommended for to minimize probe calibration and tissue dielectric parameter discrepancies. In general, SAR measurements below 300 MHz should be within  $\pm 50$  MHz of the probe calibration frequency. At 300 MHz to 6 GHz, measurements should be within  $\pm 100$  MHz of the probe calibration frequency. Measurements exceeding 50% of these intervals,  $\pm 25$  MHz  $< 300$  MHz and  $\pm 50$  MHz  $\geq 300$  MHz, require additional steps (per FCC KDB 865664 D01v01 - see reference [15]).

Probe Calibration Freq.	Device Measurement Freq.	Frequency Interval	$\pm 50$ MHz $\geq 300$ MHz
450 MHz	408 MHz	42 MHz	$< 50$ MHz <sup>1</sup>
	443 MHz	7 MHz	$< 50$ MHz <sup>1</sup>
	458 MHz	8 MHz	$< 50$ MHz <sup>1</sup>
	470 MHz	20 MHz	$< 50$ MHz <sup>1</sup>

1. The probe calibration and measurement frequency interval is  $< 50$  MHz; therefore the additional steps were not required.

## 11.0 DETAILS OF SAR EVALUATION

- The number of test frequencies and the test channels selected for the SAR evaluations are in accordance with the procedures described in FCC KDB 447498 (see reference [8]).
- The DUT was evaluated for SAR in accordance with the procedures described in FCC KDB 643646 (see reference [9]).
- The SAR evaluations were performed with a fully charged battery.
- The SAR drift of the DUT was measured by the DASY4 system for the duration of the SAR evaluations. The measured SAR droop was added to the measured SAR levels to report scaled SAR levels as shown in the SAR test data tables. A SAR-versus-Time power droop evaluation was performed and is shown in Appendix A.
- The fluid temperature remained within +/-2°C from the fluid dielectric parameter measurement to the completion of the SAR evaluation.
- The dielectric parameters of the simulated tissue mixtures were measured prior to the SAR evaluations using a Dielectric Probe Kit and a Network Analyzer (see Appendix C).
- The DUT was evaluated for SAR at the maximum conducted output power level preset by the manufacturer in unmodulated continuous transmit operation (Continuous Wave mode at 100% duty cycle) with the transmit key constantly depressed. For a push-to-talk device the 50% duty cycle compensation reported assumes a transmit/receive cycle of equal time base.
- The Scan radio model differs from the System radio model in front keypad only. The scan radio was evaluated for the worst case configuration of each antenna and head/body test position from the system radio testing.

## 12.0 SAR EVALUATION PROCEDURES

- The evaluation was performed in the applicable area of the phantom depending on the type of device being tested. For devices held to the ear during normal operation, both the left and right ear positions were evaluated using the SAM phantom.
  - For body-worn and face-held devices, a planar phantom was used.
- The SAR was determined by a pre-defined procedure within the DASY4 software. Upon completion of a reference and optical surface check, the exposed region of the phantom was scanned near the inner surface with a grid spacing of 15mm x 15mm.  
An area scan was determined as follows:
- Based on the defined area scan grid, a more detailed grid is created to increase the points by a factor of 10. The interpolation function then evaluates all field values between corresponding measurement points.
- A linear search is applied to find all the candidate maxima. Subsequently, all maxima are removed that are >2 dB from the global maximum. The remaining maxima are then used to position the cube scans.  
A 1g and 10g spatial peak SAR was determined as follows:
- Extrapolation is used to find the points between the dipole center of the probe and the surface of the phantom. This data cannot be measured, since the center of the dipoles is 2.7 mm away from the tip of the probe and the distance between the surface and the lowest measuring point is 1.4 mm (see probe calibration document in Appendix F). The extrapolation was based on trivariate quadratics computed from the previously calculated 3D interpolated points nearest the phantom surface.
- Interpolated data is used to calculate the average SAR over 1g and 10g cubes by spatially discretizing the entire measured cube. The volume used to determine the averaged SAR is a 1mm grid (42875 interpolated points).
- A zoom scan volume of 30 mm x 30 mm x 30 mm (5 x 5 x 7 points) centered at the peak SAR location determined from the area scan is used for all zoom scans for devices with a transmit frequency < 800 MHz. Zoom scans for frequencies ≥ 800 MHz are determined with a scan volume of 30 mm x 30 mm x 30 mm (7 x 7 x 7) to ensure complete capture of the peak spatial-average SAR.

## 13.0 SYSTEM PERFORMANCE CHECK

Prior to the SAR evaluations, system checks were performed with a planar phantom and an 450 MHz SPEAG validation dipole (see Appendix B for system performance check test plots) in accordance with the procedures described in IEEE Standard 1528-2003 (see reference [5]). The dielectric parameters of the simulated tissue mixture were measured prior to the system performance check using a Dielectric Probe Kit and a Network Analyzer (see Appendix C for measured fluid dielectric parameters). A forward power of 398 mW was applied to the dipole and the system was verified to a tolerance of  $\pm 10\%$  from the system manufacturer's dipole calibration target SAR value (see Appendix E for system manufacturer's dipole calibration procedures).

Notes	1. The target SAR values are the measured values from the SAR system manufacturer's dipole calibration (see Appendix E).															
	2. The target dielectric parameters are the nominal values from the SAR system manufacturer's dipole calibration (see Appendix E).															
	3. The fluid temperature was measured prior to and after the system performance check evaluations. The fluid temperature remained within $\pm 2^\circ\text{C}$ during the system performance check evaluations.															
	4. The dielectric parameters of the simulated tissue mixture were measured prior to the system performance check using a Dielectric Probe Kit and a Network Analyzer (see Appendix C).															

**System Performance Check Measurement Setup (IEEE Standard 1528-2003)**      **SPEAG 450 MHz Validation Dipole Setup**

	<u>Date(s) of Evaluation</u> May 30-Jun7, 2013	<u>Test Report Serial No.</u> 45461369 R1.0	<u>Test Report Revision No.</u> Rev. 1.1

## 14.0 SIMULATED EQUIVALENT TISSUES

The simulated equivalent tissue recipes in the table below are derived from the SAR system manufacturer's suggested recipes in the DASY4 manual (see references [10] and [11]) in accordance with the procedures and requirements specified in IEEE Standard 1528-2003 (see reference [5]). The ingredient percentage may have been adjusted minimally in order to achieve the appropriate target dielectric parameters within the specified tolerance.

SIMULATED TISSUE MIXTURES		
INGREDIENT	450 MHz HEAD	450 MHz BODY
Water	38.56 %	52.00 %
Sugar	56.32 %	45.65 %
Salt	3.95 %	1.75 %
HEC	0.98 %	0.50 %
Bactericide	0.19 %	0.10 %

## 15.0 SAR LIMITS

SAR RF EXPOSURE LIMITS			
FCC 47 CFR 2.1093	Health Canada Safety Code 6	(General Population / Uncontrolled Exposure)	(Occupational / Controlled Exposure)
Spatial Average (averaged over the whole body)		0.08 W/kg	0.4 W/kg
Spatial Peak (averaged over any 1 g of tissue)		1.6 W/kg	<b>8.0 W/kg</b>
Spatial Peak (hands/wrists/feet/ankles averaged over 10 g)		4.0 W/kg	20.0 W/kg
The Spatial Average value of the SAR averaged over the whole body.			
The Spatial Peak value of the SAR averaged over any 1 gram of tissue (defined as a tissue volume in the shape of a cube) and over the appropriate averaging time.			
The Spatial Peak value of the SAR averaged over any 10 grams of tissue (defined as a tissue volume in the shape of a cube) and over the appropriate averaging time.			
Uncontrolled environments are defined as locations where there is potential exposure of individuals who have no knowledge or control of their potential exposure.			
Controlled environments are defined as locations where there is potential exposure of individuals who have knowledge of their potential exposure and can exercise control over their exposure.

## 16.0 ROBOT SYSTEM SPECIFICATIONS

<u>Specifications</u>	
<b>Positioner</b>	Stäubli Unimation Corp. Robot Model: RX60L
<b>Repeatability</b>	0.02 mm
<b>No. of axis</b>	6
<u>Data Acquisition Electronic (DAE) System</u>	
<u>Cell Controller</u>	
<b>Processor</b>	AMD Athlon XP 2400+
<b>Clock Speed</b>	2.0 GHz
<b>Operating System</b>	Windows XP Professional
<u>Data Converter</u>	
<b>Features</b>	Signal Amplifier, multiplexer, A/D converter, and control logic
<b>Software</b>	Measurement Software: DASY4, V4.7 Build 80
	Postprocessing Software: SEMCAD, V1.8 Build 186
<b>Connecting Lines</b>	Optical downlink for data and status info., Optical uplink for commands and clock
<u>DASY4 Measurement Server</u>	
<b>Function</b>	Real-time data evaluation for field measurements and surface detection
<b>Hardware</b>	PC/104 166MHz Pentium CPU; 32 MB chipdisk; 64 MB RAM
<b>Connections</b>	COM1, COM2, DAE, Robot, Ethernet, Service Interface
<u>E-Field Probe</u>	
<b>Model</b>	ET3DV6
<b>Serial No.</b>	1590
<b>Construction</b>	Triangular core fiber optic detection system
<b>Frequency</b>	10 MHz to 6 GHz
<b>Linearity</b>	±0.2 dB (30 MHz to 3 GHz)
<u>Phantom</u>	
<b>Type</b>	Barski Planar Phantom
<b>Shell Material</b>	Fiberglass
<b>Thickness</b>	2.0 ±0.1 mm
<b>Volume</b>	Approx. 70 liters

<b>Applicant:</b>	HARRIS Corporation	<b>FCC ID:</b>	OWDTR-0141-E	<b>IC:</b>	3636B-0141

## 17.0 PROBE SPECIFICATION (ET3DV6)

<p><b>Construction:</b> Symmetrical design with triangular core; Built-in shielding against static charges PEEK enclosure material (resistant to organic solvents, glycol)</p> <p><b>Calibration:</b> In air from 10 MHz to 2.5 GHz In head simulating tissue at frequencies of 900 MHz and 1.8 GHz (accuracy <math>\pm 8\%</math>)</p> <p><b>Frequency:</b> 10 MHz to &gt; 6 GHz; Linearity: <math>\pm 0.2</math> dB (30 MHz to 3 GHz)</p> <p><b>Directivity:</b> <math>\pm 0.2</math> dB in head tissue (rotation around probe axis) <math>\pm 0.4</math> dB in head tissue (rotation normal to probe axis)</p> <p><b>Dynamic Range:</b> 5 <math>\mu</math>W/g to &gt; 100 mW/g; Linearity: <math>\pm 0.2</math> dB</p> <p><b>Surface Detect:</b> <math>\pm 0.2</math> mm repeatability in air and clear liquids over diffuse reflecting surfaces</p> <p><b>Dimensions:</b> Overall length: 330 mm; Tip length: 16 mm; Body diameter: 12 mm; Tip diameter: 6.8 mm Distance from probe tip to dipole centers: 2.7 mm</p> <p><b>Application:</b> General dosimetry up to 3 GHz; Compliance tests of mobile phone</p>	
<b>ET3DV6 E-Field Probe</b>	

## 18.0 PHANTOM(S)

<p>The Barski Planar Phantom is a fiberglass shell phantom with a 2.0 mm (+/- 0.2mm) thick device measurement area at the center of the phantom for SAR evaluations of devices with a larger surface area than the planar section of the SAM phantom. The planar phantom is integrated in a wooden table. The planar phantom is used for SAR evaluations and system performance check evaluations. See Appendix G for dimensions and specifications of the Barski planar phantom.</p>	
<b>Barski Planar Phantom</b>	

## 19.0 DEVICE HOLDER

<p>The DASY4 device holder has two scales for device rotation (with respect to the body axis) and the device inclination (with respect to the line between the ear openings). The plane between the ear openings and the mouth tip has a rotation angle of 65°. The bottom plate contains three pair of bolts for locking the device holder. The device holder positions are adjusted to the standard measurement positions in the three sections.</p>	
<b>Device Holder</b>
