Report #: 2019070

## 1 General Information

The following Class 2 Permissive Change Report is prepared on behalf of **Harris Corporation** in accordance with the FCC and ISED rules and regulations. The Equipment Under Test (EUT) was the **XL-200P (International)**.

All measurements contained in this application were conducted in accordance with the applicable sections of FCC Rules and Regulations CFR 47 Parts 2, 15, 22, 74, 80 and 90, and ISED RSS-119. Calibration checks are performed regularly on the instruments, and all accessories including high pass filter, coaxial attenuator, preamplifier and cables.

### 1.1 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is located on the parking lot of Rhein Tech Laboratories, Inc. 360 Herndon Parkway, Suite 1400, Herndon, Virginia 20170. This site has been fully described in a report submitted to, and approved by, the Federal Communications Commission to perform AC line conducted and radiated emissions testing.

### 1.2 Related Submittal(s)/Grant(s)

This is a Class 2 Permissive Change Report based on a change to a SKU reduction.

The original FCC and ISED certifications were granted March 3 and March 7, 2016 respectively. Two additional models were approved November 20, 2017. Two emission designators were added to the FCC and ISED certifications on January 23, 2019 and January 8, 2019 respectively.

The Harris model numbers currently included in this ISED family certification are:

XL-PFM2M	XL-PFM2Y	XL-PFM2B	XL-PFM2G	XL-PFM2P
XL-PPM2M	XL-PPM2Y	XL-PPM2B	XL-PPM2G	XL-PPM2P

## 2 Tested System Details

The test sample was received on June 3, 2019. Listed below are the identifiers and descriptions of all equipment, cables, and internal devices used with the EUT for this test, as applicable.

**Table 2-1: Equipment Under Test (EUT)**

Part	Manufacturer	Model	Serial Number	FCC ID	RTL Bar Code
Radio	Harris Corporation	XL-200P	A40302201644RW	OWDTR-0145-E	23254

## 2.1 EUT Exercise Description

The EUT was supplied with the ability to change LMR, LTE, Bluetooth, and Wi-Fi frequencies for testing radiated emissions and collocation of various frequencies. The EUT was tested in all three orthogonal planes in order to determine worst-case emissions. The EUT was provided with software to continuously transmit during testing. The carrier was also checked to verify that information was being transmitted. There were no deviations from the test standard(s) and/or methods. The test results reported relate only to the item tested.

The EUT was configured for testing in a manner simulating a typical end-user configuration. All circuitry, clocks, and oscillators were powered, and all functions were active. Applicable I/O ports to be cabled or loaded included Ethernet and data programming cables. For testing purposes, the EUT was programmed using a generic programming board.

## 2.2 Test Result Summary

**Table 2-3: Test Result Summary – FCC Part 15 Subpart C**

Test	FCC Reference	Result
Collocation Radiated Emissions	FCC 15.209	Pass

**3 FCC Part 2.1053(a): Field Strength of Spurious Radiation; Part 90.543: Out of Band Emissions Limit; RSS-Gen 6.13: Transmitter Unwanted Emissions**

**3.1 Test Procedure**

ANSI 63.26, section 5.5.

The device uses digital modulation modulated to its maximum extent using a pseudo-random data sequence.

The spurious emissions levels were measured, and the device under test was replaced by a substitution antenna connected to a signal generator. This signal generator level was then corrected by subtracting the cable loss from the substitution antenna to the signal generator, and the gain of the antenna (dBi) was added to achieve the EIRP level, then converted from the corrected signal generator level (dBm) to dBc, and compared to the limit.

For emissions in the 1559–1610 band, Part 90.543(f) states: “For operations in the 763–775 MHz and 793–805 MHz bands, all emissions including harmonics in the band 1559–1610 MHz shall be limited to -70dBW/MHz equivalent isotropically radiated power (EIRP) for wideband signals, and -80 dBW EIRP for discrete emissions of less than 700 Hz bandwidth. For the purpose of equipment authorization, a transmitter shall be tested with an antenna that is representative of the type that will be used with the equipment in normal operation.”

**3.2 Test Data**

**4 Conclusion**

The data in this measurement report shows that the harmonic emissions levels and intermodulation frequencies for collocation testing were passing for the Harris Corporation XL-200P (International),  
FCC ID: OWDTR-0145-E, IC: 3636B-0145.
