

## **Description of Operation**

### **Model DC-5018**

This transmitter is a remote control device designed and manufactured for the purpose of radio control of garage door openers and other like devices. The physical size of these devices is such that they can be either hand held or visor mounted on the interior of an automobile or similar vehicle. Model DC-5018 operates on a fixed frequency of 433.92MHz.

Operation or actuation of this device is controlled by a simple electromechanical switch. Depressing the switch causes the transmitter to emit the radio signal and upon releasing the switch, the transmitter ceases to emit the radio signal.

Personal coding of the device is provided by a small 10 position switch which is mounted on the printed circuit board. Access to this switch is provided when the cover of the transmitter is removed. 10 switch positions provide 1,024 personal code selections.

All models are compliant with F.C.C. Part 15 Rules.
