General Information

Product Name FCC ID Model / Type	C & I Gas Meter Interface OWS-962 962	
Manufacturer's Name: Manufacturer's Address	Innovatec Communications, LLC 13000 W. Silver Spring Drive, PO Box 910 Butler, Wisconsin 53007USA	
Contact(s)	Tel: 262-783-0200 Mr. Kimbel A. Nap	Fax: 262-783-0205 Mr. Kevin Prudlow
Laboratory	International Technology Company (ITC) 9959 Calaveras Road, PO Box 543 Sunol, CA 94586-0543 Tel: (925) 862-2944 Email: itcemc@aol.com	
Total No. of Pages	32	
Test No. & Report No.	20010404-1	0104FRS104-1
Test Date & Issue Date	May 2 - 4, 2001	May 10, 2001
Project Technician(s)	Elijah Garcia & O'Lanre Owoborode	Michael Gbadebo, PE

According to testing performed by International Technology Company (ITC); the above-mentioned unit is in compliance with the emissions requirements defined in FCC Part 15 B and C. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical characteristics. Any modifications necessary for compliance made during testing must be implemented in all production units for compliance to be maintained.

International Technology Company (ITC) as an independent testing laboratory, declares that the equipment tested conforms to the emissions requirements of FCC Part 15 B & C.

Tests Performed:

1. Radiated Emissions in a 3-meter open area site in accordance with 47 CFR §15.209 and §15.31(m). Part 3 of this report contains details.
2. Occupied Bandwidth Test in accordance with 47 CFR §15.247(2). Part 4 of this report contains details.
3. Harmonics and Spurious Emissions Test in accordance with 47 CFR §2.1053 and §15.249(a). Part 5 of this report contains details.
4. Maximum Peak Output Power Test Requirement in accordance with 47 CFR §15.247(b). Part 6 of this report contains details.

The results show that the sample equipment tested as described in this report is in compliance with the FCC Rules Part 15, SubPart B: Open Field Radiated Emissions. Occupied Bandwidth, Harmonics and Spurious Emissions and Maximum Peak Output Power test requirement limits of, SubPart C.

Michael Gbadebo, PE Chief Engineer/Principal Consultant

Declaration/Disclaimer

International Technology Company (ITC) reports apply only to the specific samples tested under stated test conditions. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. International Technology Company (ITC) shall have no liability for any deductions, inferences or generalizations drawn by the client or others from International Technology Company (ITC) issued reports.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full without our written approval. The applicant/manufacturer may not use this report to claim product endorsement by NVLAP or any US Government agency.

International Technology Company (ITC) is:

Accepted by the Federal Communications Commission (FCC) for FCC Methods, CISPR Methods and AUSTEL Technical Standards (Ref: NVLAP Lab Code 200172-0)

Approved by the Industry Canada for Telecom Testing

Certified by Rockford Engineering Services GmbH for EMC Testing according to the European EMC Directive 89/336/EEC per EN45001

Certified by Reg. TP for EMC Testing according to the European EMC Directive 89/336/EEC per EN45001 for RES GmbH (DAR-Registration number: TTI-P-G159/98-00)

Certified by the Voluntary Control Council for Interference by Information Technology Equipment (VCCI) for EMC testing in accordance with the Regulations for Voluntary Control Measures, Article 8, Registration Numbers - Site 1: C-714 and R-696; Site 2: C-715 and R-697

Part 1 General

Test Methodology

The tests described in this report were performed by an independent electromagnetic compatibility Laboratory, International Technology Company, in accordance with the FCC test procedure ANSI C63.4-1992.

Test Facility

The open area test site, the conducted measurement facility, and the test equipment used to collect the emissions data is located in Sunol, California, and is fully described in site attenuation report. The approved site attenuation description is on file at the Federal Communications Commission.

Accuracy of Test Data

The test results contained in this report accurately represent Open Field Radiated Emissions, Occupied Bandwidth, Frequency Stability, RF Power Output, Spurious and Harmonic tests generated by the sample equipment under test.

Support Equipment included in the Tests:

The C & I Gas Meter Interface was tested as a stand-alone device.

Part 2
Powerline Conducted Emissions
per FCC Part 15 Subpart B

Powerline Conducted Emissions test was not performed on the C & I Gas Meter Interface because it was powered by 3.6Vdc Lithium/Thionyl/Chloride Battery.

Applicant: Innovatec Communications, LLC

FCC ID: OWS-962
Page 8 of 32

Rev. No 2.0

FCC Part 15 SubPart B & C

Part 3 Open Field Radiated Emissions per FCC Part 15 Subpart B

3.1 EUT Configuration

Pre-scan measurements were first performed with a spectrum analyzer set in fast sweep mode. Significant peaks are marked and then quasi-peaked. Measurement range investigated was from 30 MHz to 1 GHz. The EUT was set up in accordance with the suggested configuration given in FCC measurement procedure ANSI C63.4-1992; using a receiver with bandwidth parameters. The C & I Gas Meter Interface was set up on a wooden non-conductive tabletop, 80 cm above the ground reference plane, in an open field. The dimension of the table was 1.5m x 1.0m. Excess cord was folded back to form a 30-cm by 40-cm bundle, which was hanging mid-way above the ground plane. Frequency measurement was taken from 30MHz up to 10th harmonic.

3.2 Test Procedure

The EUT was set up as described above while transmitting and receiving continuously. It was rotated 360 degrees azimuth and the search antenna height varied 1 to 4 m in order to maximize the emissions from the EUT. The highest emissions were also analyzed in detail by operating the spectrum analyzer in fixed tuned mode to determine the precise amplitude of the emissions. While doing so, interconnecting cables were moved around to maximize the emissions.

3.3 Data Table Legend and Field Strength Calculation

'Margin' indicates the degree of compliance with the applicable limit. For example, a margin of -8 dB means that the emissions are 8 dB below the limit (in compliance); +a margin of +4 dB means that the emission is 4 dB over the limit (out of compliance). The margin calculated as follows:

Margin = Corrected Amplitude - Limit, where Corrected Amplitude = Amplitude + Antenna Correction Factor + Cable Loss - amplifier gain.

3.4 Nominal Spectrum Analyzer Configuration (during swept frequency scans)

Start Frequency 30MHz
Stop Frequency 1000MHz
Sweep Speed Manual

Measurements below 1GHz

RES Bandwidth 100 kHz
Video Bandwidth 100 kHz
Quasi Peak Adapter Mode Normal
Quasi peak Adapter Bandwidth 120 kHz

Measurements above 1GHz (unless stated otherwise)

Analyzer Mode Video Filter
RES Bandwidth 1MHz
Video Bandwidth 1MHz
Freq.Span 3MHz
Offset 0dB
Quasi Peak Adapter Mode Disabled

Open Field Radiated Emissions per FCC Part 15 SubPart B

3.5 Administrative Details

Date(s) of Test	May 2 - 4, 2001
Emission Limits	Class B
Distance	10M Field
Antenna Used	Biconical Antenna, model # EMCO 3104, S/N 3459 and Log Periodic Antenna, model # EMCO 3146, S/N 2075 (calibrated 01/19/2001, next calibration due date is 01/19/2002)

3.6 Test Results

The table below shows a summary of the highest amplitudes of the radiated emissions from the equipment under test at various antenna heights, antenna polarization, and EUT orientations.

Indicated Frequency MHz	Amplitude dBuV/M	Antenna Distance dB	Cable Factor dB	Corrected Amplitude dBuV/M	Turntable Angle Degree	Height M	Antenna Polarization -	FCC15 Limit dBuV/M	Class B Margin dB
33.10	9.2	11.7	2.5	23.4	90	1.0	VB	40.0	-16.6
112.20	8.5	13.9	3.9	26.3	180	2.0	HB	43.5	-17.2
198.10	10.7	15.3	4.7	30.7	0	2.0	HB	43.5	-12.8
249.52	19.1	13.2	5.2	37.5	180	2.0	HL	46.0	-8.5
552.00	12.4	19.7	6.8	38.9	270	1.0	VL	46.0	-7.1
946.00	0.5	23.8	8.3	32.6	180	3.0	HL	46.0	-13.4

No emissions of significant levels were observed between 30 MHz and 1 GHz. No significant emission levels were observed between 1 GHz and 10th harmonics of the EUT.

Conclusion

The C & I Gas Meter Interface meets the requirements of the test reference for Open Field Radiated Emissions of Section 15.109 for class B Digital Devices.

Part 4
Occupied Bandwidth
per FCC Part 15 Section 47 CFR §15.247(2)

4.1 EUT Configuration

The EUT was set up in accordance with the suggested configuration given in FCC Measurement Procedure ANSI C63.4-1992; using a Hewlett Packard 8566B Spectrum Analyzer with detector and bandwidth parameters as stipulated in C63.4-1992. The C & I Gas Meter Interface was powered by 3.6Vdc power supply.

4.2 Test Procedure

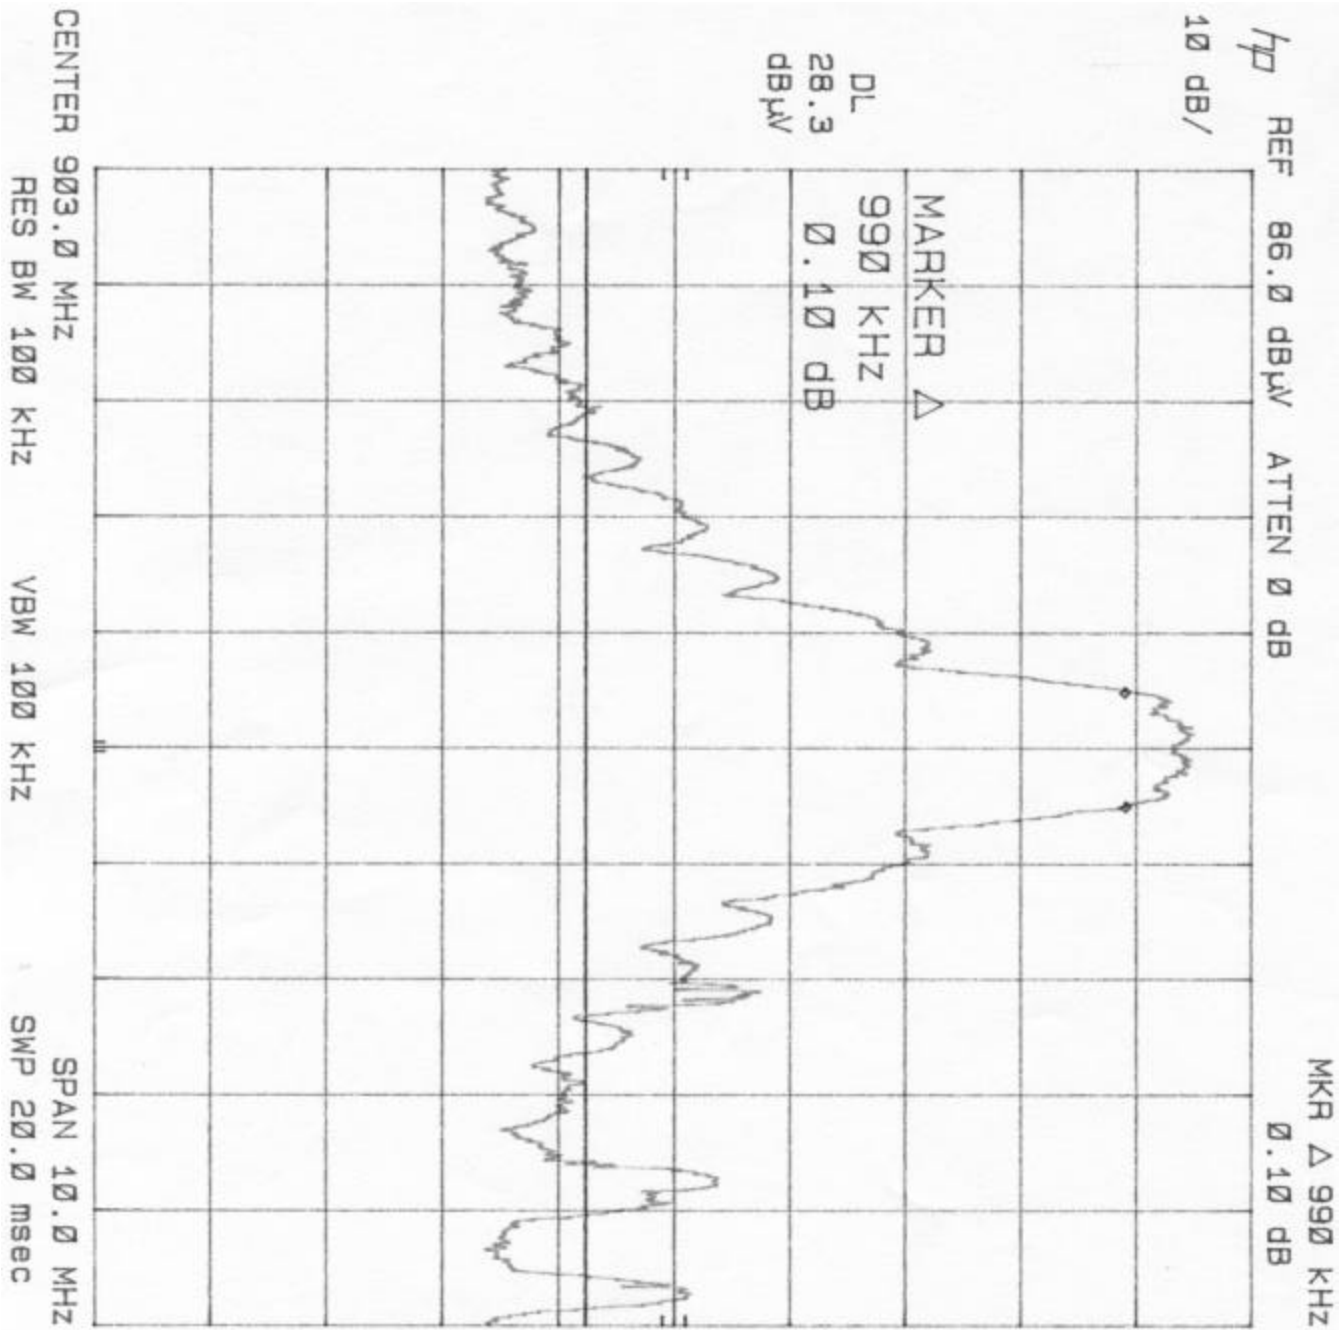

The EUT was placed on the wooden turntable and the table was rotated until the highest emissions were observed. It was transmitting continuously with modulation turned ON at low, medium, and high channel frequencies. Signal was monitored with HP 8566B Spectrum Analyzer, using the EMCO Double-Ridged Wave-guide Horn Antenna, model #3115. Unless stated otherwise. The receiving antenna was raised to maximize the signal strength (1-1.6 meter above the referenced ground plane). At each channel frequency, the EUT was monitored for spurious modulation products including harmonics (up to 10th), 6dB bandwidth, peak spectral power density, peak conductive power, and dwell time.

 FCC ID: OWS-962

Rev. No 2.0

FCC Part 15 SubPart B & C

**Part 5
Fundamental Harmonic & Spurious Emissions
per FCC Part 2 Section 47 CFR §2.1053 & Part 15 Section 47 CFR §15.249(a)**

5.1 EUT Configuration

The C & I Gas Meter Interface was set up in accordance with the suggested configuration given in FCC Measurement Procedure ANSI C63.4-1992, using a Hewlett Packard 8566B and 8569A Spectrum Analyzers with detector and bandwidth parameters as stipulated in C63.4-1992. At frequencies above 1GHz, average measurements, if necessary, were made using the video filter method and quasi peak detector and pre-selector functions were disabled. The EUT was DC powered, at 3.6 V nominal voltage.

5.2 Test Procedure

The EUT was configured for maximum response and was set up as described above and configured to transmit continuously (with modulation on) at low, medium, and high channel frequencies. Spurious emissions were monitored with HP 8566B and 8569A Spectrum Analyzers, below and above the center frequencies using an appropriate receiving antenna. The spurious emissions were obtained by varying the height of the antennas and then rotating the turntable in 360-degree turns until the maximum signal to noise ratio is obtained. Unless stated otherwise, the receiving antenna to EUT distance was set at 3-meter distance. Highest emission was obtained when the EUT was placed in the horizontal plane while the antenna polarization was in the vertical plane to maximize the readings. The measurements were either peak quasi-peak measurements below 1 GHz and average measurements above 1 GHz

5.3 Spectrum Analyzer Configuration (During Swept Frequency Scans)

** Fundamental frequency at channel 16

Emissions radiated outside of the fundamental frequency meet the requirement of section 15.209. The field strength of the harmonics also meets the requirements of section 15.249

Conclusion

The C & I Gas Meter Interface meets the requirements of the test reference for Fundamental Harmonics and Spurious Emissions.

Part 6
Maximum Peak Output Power
per FCC Part 15 Section 47 CFR §15.247 (b)

6.1 EUT Configuration

The C & I Gas Meter Interface was set up in accordance with the suggested configuration given in FCC Measurement Procedure ANSI C63.4-1992. The measurement instrumentation used was an Hewlett Packard 8569A Spectrum Analyzer with detector and bandwidth parameters as stipulated in C63.4-1992. The output of the EUT was connected directly to the input of spectrum analyzer via the shortest cable possible. The EUT was then powered by an external power supply set to 3.6 V dc at each channel frequency (low, high, and medium).

6.2 Test Procedure

The EUT was configured for maximum response and was set up as described above and configured to transmit continuously with modulation turned on. Signal was monitored with a HP 8566B Spectrum Analyzer, The RF power output = Measured value + cable correction factor.

DC Computer System	Kepeco JQE150-1.5m	H177085	05/16/2000	05/16/2001

The spectrum analyzers are self-calibrated before every test and are calibrated to NIST standards annually. All of the other EMI equipment is calibrated on a monthly basis using the spectrum analyzers as standards.

Appendix B Technical Description and Specification

Assembly Contents

Innovatec IMU Gas PCA and Reed Switch PCA – P/N's: 210-050001 and 217-050001
 Three (3) "D"-Cell Lithium/Thionyl/Chloride Battery Pack (3.6V)
 2-Wire 22AWG power connection cable assembly
 3-Wire 22AWG reed switch pulse input cable assembly
 Lexan polycarbonate mounting board
 Lexan polycarbonate NEMA 4X enclosure
 Lexan polycarbonate mounting tabs

System Details

The Innovatec C & I Gas Meter Interface is a derivative device of the Innovatec Gas IMU. The principal differences in the system are: 1) The unit receives an externally applied pulse input from the C & I gas meters; 2) The unit employs a 3 "D"-Cell battery pack to allow for improved battery life because this system is likely to be queried much more often than the standard gas IMU; and 3) The unit has been repackaged to allow for the significantly larger battery pack and the reed switch pulse pickup from the external source (enclosure dimensions are 6.7" L X 4.8" W X 2.2" H). The IMU included in the assembly has the same specifications as the already certified unit. Some details of that specification include:

Item	Specification
Physical dimensions	6.67" L X 4.76" W X 2.19" H
Weight	2.7 lbs.
Power supply	(3) 3.6 volt D-cell lithium-based battery pack
Output power	>27 dBm
Sensitivity	>40 dBm SINAD
Channels	17 (spaced at 1.5 MHz)
Frequency range	903 to 927 MHz
Modulation	Direct Sequence Spread Spectrum
Base data rate	62.5 KB / second
Compliance	FCC Part 15, Class C
Interface	RFLAN
Antenna type	Internal
Enclosure	Lexan NEMA 4X Enclosure
Temperature range	-40° to +85°C

Technical Description and Specification

C & I Gas Meter Interface Features

- Full Two-way 900 MHz spread-spectrum communications between the IMU and the utility
- Direct sequence spread-spectrum communication improves security
- 17 channels allow frequency coordination in dense applications with minimal interference
- Software programmable configuration and control profiles
- 3.6-volt lithium-based long life battery pack
- Unique serial number and assignable PIN
- Autonomous tamper alarms
- Virtual Shut-off capabilities
- Run-away meter detection
- First/Final Reading
- Customer Selectable Billing Dates
- Data and Intelligence Stored in the Meter

NCI RF Specifications per FCC 2.1033 (b)(4)

- Frequency Range 903-927 MHz
- Spectrum Technique Direct Sequence Spread Spectrum
- Modulation Scheme Minimum Shift Key (MSK)
- Bit Rate 62.5 kb/sec (12Mhz/192)
- Chipping Rate 1Mc/sec (62.5kb/sec x 16 chips/bit)
- Channel Capacity 17 (From 0 -16)
- Channel Spacing 1.5 MHz
- Power supply 3.6Vdc/240 mA (Constant Tx)
- Power Consumption 3.6Vdc/90 mA (Constant Rx)
- PLL VCO 1.4 V max
- Null to Null Bandwidth 1.6 MHz
- 6 dB Bandwidth 600 KHz
- First Side-lobe Level 29dBc
- Output Power >27dBm
- Receive Sensitivity -90 dBm
- Frequency Tolerance ± 20 ppm
- Total Frequency Drift ± 45 ppm

DSS Processing Gain Calculation Per FCC 15.247 (e)(1)

- The Transmit module generates the spread spectrum binary sequence for output to the RF modulator (directly modulated VCO).
- The Transceiver logic encodes two consecutive bits of data into one of four possible 32-bit (chip) PN sequences. Consequently, an improvement in the signal to noise ratio is achieved since each pair of the data bit is now represented by 32 chips. The improvement, or processing gain in decibel is as follows:

$$\text{Processing Gain} = 10 \log (32 \text{ chips} / 2 \text{ bits})$$

$$\text{Processing Gain} = 12 \text{ dB}$$

- The Transmitted PN sequence is further randomized by modulus-2 addition with a fixed 2047-bit PN sequence. This operation smoothes (spectral Whitens) the output spectrum by eliminating discrete spectral components.

(Additional information is uploaded separately)

Appendix C Modification Letter

To Whom it May Concern:

This is to certify that no modifications were necessary for:

C & I Gas Meter Interface, model 962

to comply with:

1. Radiated Emissions in a 3-meter open area site in accordance with 47 CFR §15.209 and §15.31(m).
2. Occupied Bandwidth Test in accordance with 47 CFR §15.247(2).
3. Harmonics and Spurious Emissions Test in accordance with 47 CFR §2.1053 and §15.249(a).
4. Maximum Peak Output Power Test Requirement in accordance with 47 CFR §15.247.

The results show that the sample equipment tested as described in this report is in compliance with the FCC Rules Part 15, SubPart B, Open Field Radiated Emissions, Occupied Bandwidth, Harmonics and Spurious Emissions and Maximum Peak Output Power test requirement limits of, SubPart C.
