457 800 Key Fob

Label Location Justification

The position chosen for the FCC label is on the main part of the unit under the battery cover.

The reasons for this choice are as follows:

The battery cover is easily removable by unclipping the cover from the main unit. No special tools are required for screws or any additional fastening devices.

The only space available on the outside on the unit is on the removable battery cover.

In the event of the cover being left off or lost the FCC qualification would not be evident.

For practical and aesthetic reasons the label could not be placed on the front or sides of unit because of limited space and the position of the press buttons.

In the position chosen, the FCC Label will be easily seen when the battery cover is removed.

The label is positioned such that it can be seen without removing the battery.

The Key Fobs are normally supplied with batteries to the new owner when the vehicle for which it is intended is purchased. In the event of a spare or replacement Key Fob being purchased it would be necessary to fit the battery at the time of purchase and the FCC label would then be seen.
