457 801 Key Fob

Label Location Justification

The position chosen for the FCC label is on the underside of the Key Fob.

The reasons for this choice are as follows:

For practical and mainly for aesthetic reasons the label could not be placed on the front or sides of the unit because of limited space and the position of the press-buttons.

The most practical position for external visibility of the FCC ID number is on the underside of the Key Fob as illustrated below. For clarity, the lettering in the illustration is in white but in practice the ID number will be moulded into the plastic during manufacture and will therefore be permanent and indelible and in the same colour as the moulded housing.

We trust that this is acceptable and we look forward to receiving the grant.

Yours faithfully,

E. A. B. Ulett

Project Coordinator
