Variant Differences

FCC ID: OXC91131X

The 91131X keyfob comes in two variants.

1. 911311 is a 3-button version.
2. 911312 is a 2-button version.

Both versions use the same PCB (911-212-01CA), the third button is either populated or not populated depending on which version is ordered.

The functional difference between the two variants is solely that the third button sends a 3rd command to open the trunk of the vehicle.
