

RF Exposure Information

FCC §2.1093

Compliance with the SAR requirements is considered without testing because the RF power of channel is below SAR Test Exclusion Threshold. The SAR Test Exclusion Threshold (TET in mW) was calculated according to the KDB 447498 D01, Sec 4.3.1.a) using formula:

$$\text{TET} = [(\text{max. power of channel, mW}) / (\text{min. test separation, mm, d})] \times [\sqrt{f_{\text{(GHz)}}}]$$

where

max. power = 3.56 mW, min test separation d = 5 mm, f = 0.915 GHz,

$$\text{TET} = 0.6811 \leq 3.0 \text{ and } \leq 7.5$$
