Subject: Class II Permissive Change for FCC ID OYE-MWT

Dear Sir or Madam:

I am reporting a Class II permissive change for our radio transmitter, witch was granted a FCC ID OYE-MWT in May 2 2000. The transmitter is used for safety control in the gate/door industry.

The reason for a modification is to combine 3 electronics boards into a single board. This leads to a smaller transmitter enclosure. The emission frequency is still 318 MHz and has been verified with an UHF oscilloscope. The new model's emission intensity and working distance have been field tested to be no larger than those of its predecessor's. Emission time is reduced to 1 second when the transmitter is activated by an unsafe condition. Therefore, we are filing for the permission to use the FCC ID OYE-MWT for this new model.

Thanks.

Sincerely,

Dongjie Cheng
