1.5 RESERVATION

This test report is only valid in its original form.

Any reproduction of its contents without written permission of the accredited test laboratory PHOENIX TEST-LAB GmbH is prohibited.

The test results herein refer only to the tested sample. PHOENIX TEST-LAB GmbH is not responsible for any generalisations or conclusions drawn from these test results concerning further samples. Any modification of the tested samples is prohibited and leads to the invalidity of this test report. Each page necessarily contains the PHOENIX TEST-LAB Logo and the TEST REPORT REFERENCE.

1.6 NORMATIVE REFERENCES

[1] **ANSI C63.4-1992** American National Standard for Methods of Measuring of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz.

[2] FCC 47 CFR Part 15 (December 2003) Radio Frequency Devices

1.7 TEST RESULTS

The requirements of this test document are fulfilled by the equipment under test. The complete test results are presented in the following.

2 TECHNICAL DATA OF EQUIPMENT

2.1 DEVICE UNDER TEST

Type of equipment:	Tire pressure monitoring transmitter*	
Type designation:	TSS/RE3T	
Serial No.:	4200005528	
Highest operating frequency:	315.000 MHz*	

^{*} declared by the applicant

The following external I/O cables were used:

Cable	Length	Shielding	Connector	
-	-	-	-	

2.2 PERIPHERY DEVICES

The ancillary equipment mentioned below was in use:

No ancillary equipment necessary.

2.3 MODIFICATIONS

No modifications necessary to fulfil the requirements.

3 OPERATIONAL STATES AND PHYSICAL BOUNDARIES

The transmitter was tested in normal operation mode:

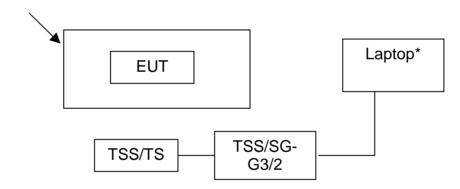

To stimulate the transmitter the EUT (TSS/RE3T) was triggered by a 125 kHz-Transmitter (Type BERU TSS/TS) to transmit every 1 second.

The transmitter was operating on the following frequency:

Channel:	Transmit frequency:
1	315.000 MHz

The physical boundaries of the Equipment Under Test are shown below.

Physical boundaries of the EUT:

^{*} Laptop with Vector Tool "CANoe" to establish CAN communication to Control Unit (TSS/SG-G3/2). Vector Tool "CANape" to stimulate the Transmitter (TSS/RE3T) transmitting every second RF-telegrams.

4 LIST OF TEST MODULES

4.1 EMISSION

Field	Field strength of spurious emissions FCC 47 CFR Part 15 section 15.231 (b)					
No.	Application	Frequency range	Limits	Reference standard	Remark	Status
1	Intentional radiator	30 to 960 MHz above 960 MHz	55.62 dBµV/m at 3 m 55.62 dBµV/m at 3 m	ANSI C63.4 (1992)	-	Passed
Field	strength of fundar	mental FCC 47 CFR	R Part 15 section 15.231	(b)		
No.	Fundamental frequency	Transmitter frequency	Limits	Reference standard	Remark	Status
2	260 – 470 MHz	315.000 MHz	6041.67 μV/m or 75.62 dBμV/m at 3m	ANSI C63.4 (1992);	-	Passed
Band	lwidth of emission	FCC 47 CFR Part 1	5 section 15.231 (c)			
No.	Application	Frequency range	Limits	Reference standard	Remark	Status
3	Intentional radiator	70 to 900 MHz	0.25% of the center frequency (20 dB-points)	-	-	Passed

5 METHOD OF MEASUREMENT

5.1 RADIATED EMISSIONS 30 MHz TO 4 GHz

The radiated emission measurement is divided into two stages.

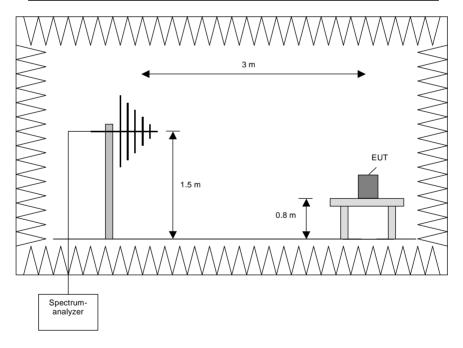

Preliminary measurement:

In the first stage a preliminary measurement will be performed in a fully anechoic chamber with a measuring distance of 3 meter. Tabletop devices will set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices will be placed directly on the turntable/ground plane. The set up of the Equipment under test will be in accordance to ANSI C63.4-1992 [1].

The frequency range 30 MHz to 4 GHz will be measured with an EMI Receiver set to MAX Hold mode. The measurement will be performed in horizontal and vertical polarisation of the measuring antenna and while rotating the EUT in its vertical axis in the range of 0 ° to 360 °.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
30 MHz to 1 GHz	100 kHz
1 GHz to 4 GHz	1 MHz

Procedure preliminary measurement:

Prescans were performed in the frequency range 30 MHz to 200 MHz, 200 MHz to 1 GHz and 1 GHz to 4 GHz.

The following procedure will be used:

- 1. Monitor the frequency range at horizontal polarisation and a EUT azimuth of 0 °
- 2. Manipulate the system cables within the range to produce the maximum level of emission
- 3. Rotate the EUT by 360 ° to maximize the detected signals.
- 4. Make a hardcopy of the spectrum
- 5. Measure the frequency of 3 highest detected emissions with a lower span and resolution bandwidth to increase the accuracy and note the frequency value.
- 6. Repeat steps 1) to 4) with the other orthogonal axes of the EUT if handheld equipment
- 7. Repeat steps 1) to 5) with the vertical polarisation of the measuring antenna.

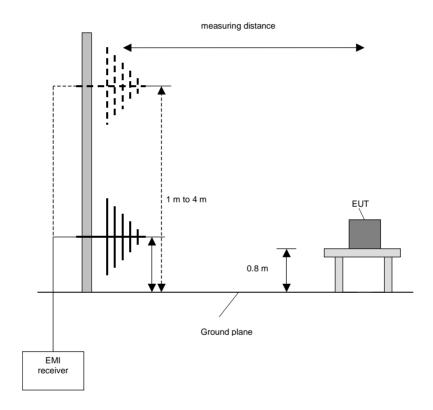

Final Measurement:

In the second stage a final measurement on an open area test site will be performed on selected frequencies found in the preliminary measurement. During this test the EUT will be rotated in the range of 0 ° to 360 °, the measuring antenna will be set to horizontal and vertical polarisation and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
30 MHz to 1 GHz	120 kHz

Procedure final measurement:

The following procedure will be used:

- 1) Measure on the selected frequencies at an antenna height of 1 m and a EUT azimuth of 23 °
- 2) Move the antenna from 1 m to 4 m and note the maximum value at each frequency.
- 3) Rotate the EUT by 45° and repeat 2) until an azimuth of 337° is reached.
- 4) Repeat 1) to 3) for the other orthogonal antenna polarization.
- 5) Move the antenna and the turntable to the position where the maximum value is detected.
- 6) Measure while moving the antenna slowly +/- 1 m
- 7) Set the antenna to the position where the maximum value is found
- 8) Measure while moving the turntable +/- 45 °
- 9) Set the turntable to the azimuth where the maximum value is found
- 10) Measure with Final detector (Peak) and note the value
- 11) Repeat 5) to 10) for each frequency
- 12) Repeat 1) to 11) for each orthogonal axes of the EUT if handheld equipment.

6 TEST RESULTS EMISSION TEST

6.1 PRELIMINARY RADIATED EMISSION TEST (30 MHz to 1 GHz)

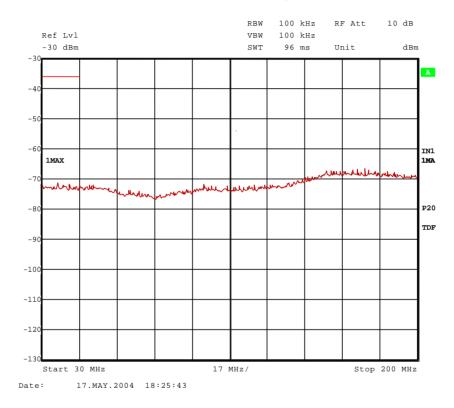

Ambient temperature	20 °C	Relative humidity	60 %
---------------------	-------	-------------------	------

Position of EUT: The EUT was set-up on a wooden table of a height of 0.8 m.

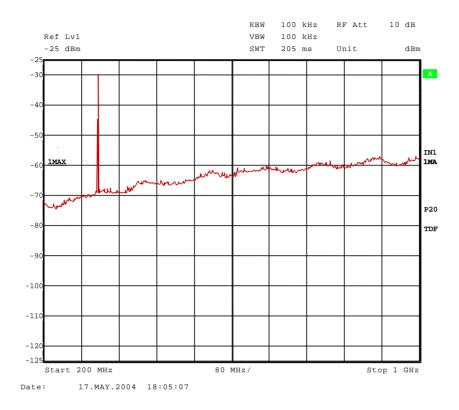

The distance between EUT and antenna was 3 m.

Cable guide: No cable necessary.

Test record: The test was carried out in normal operation-mode.

40451tx3.wmf: 30 MHz to 200 MHz

40451tx4.wmf: 200 MHz to 1000 MHz

The following significant frequencies were found during the preliminary radiated emission test:

315.000 MHz, 630.000 MHz, 945.000 MHz

These frequencies have to be measured on the open area test site.

TEST EQUIPMENT USED FOR THE TEST:

29, 31 - 35, 37

6.2 FINAL RADIATED EMISSION TEST (30 MHz to 1 GHz)

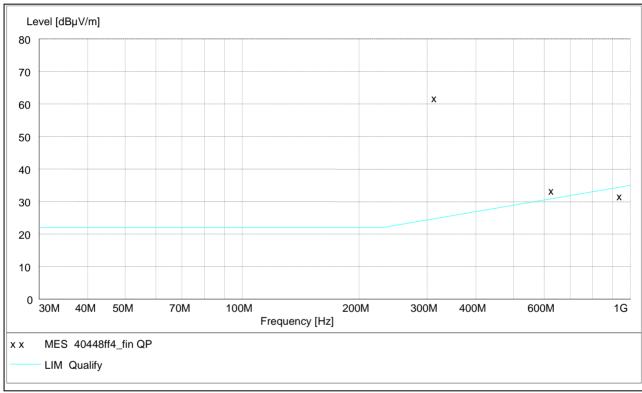

Ambient temperature	20 °C		Relative humidity	60 %
---------------------	-------	--	-------------------	------

Position of EUT: The EUT was set-up on a wooden table of a height of 0.8 m. The distance

between EUT and antenna was 3 m.

Cable guide: No cable necessary.

Test record: The test was carried out in normal operation-mode.

Data record name: 40448ff4 of 18 May 2004

Continued next page:

Examiner: Raimund BLASK Date of issue: 9 June 2004 Page 12 of 21

Continued:

The field strength E was calculated as follows:

Peak E-field: F = U + k (k = antenna factor + cable loss – amplifier gain)

Duty cycle correction factor: D = 20 log (10 ms / 920 ms) = -39.7 dB (Maximum 20 dB)

Calculated averaged field: E = F + D

Freq.:	Peak-	Trans-	Peak-	Duty	Calculated	Limit:	Margin:	Result:
	reading U:	ducer k:	E-field F:	Cycle D:	averaged			
					field E:			
MHz	dΒμV	dB/m	dBµV/m	dB	dBµV/m	dBµV/m	dB	
315.000	47.0	15.0	62.0	-20	42.0	75.6	33.6	Passed
630.000	10.8	22.7	33.5	-20	13.5	55.6	42.1	Passed
945.000	4.5	27.3	31.8	-20	11.8	55.6	43.8	Passed

TEST EQUIPMENT USED FOR THE TEST:

14 - 20

6.3 RADIATED EMISSION TEST (1 GHz to 4 GHz)

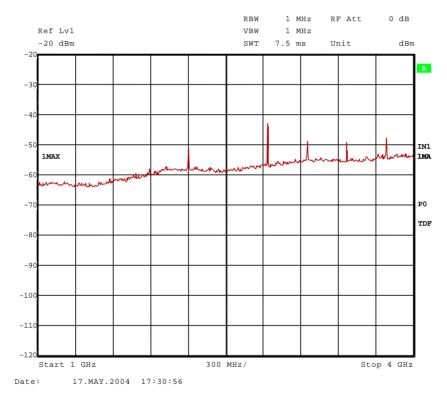

Ambient temperature	20 °C		Relative humidity	50 %
---------------------	-------	--	-------------------	------

Position of EUT: The EUT was set-up on a wooden table of a height of 0.8 m.

The distance between EUT and antenna was 3 m.

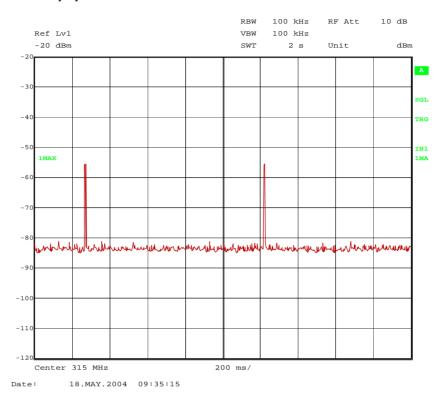

Cable guide: No cable necessary.

Test record: The test was carried out in normal operation-mode.

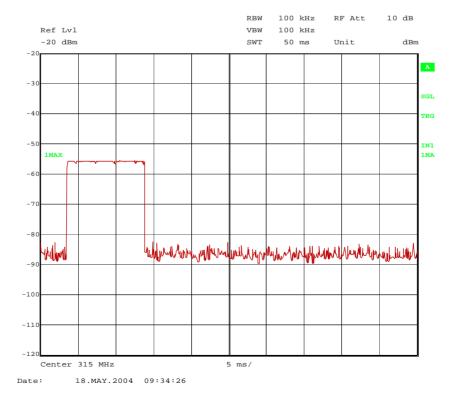

40451tx5.wmf: 1 GHz to 4 GHz

Measurement results: Duty cycle

40451duty1.wmf: Transmitter on / off – time: t (off-time) = 920 ms

40451_6duty1.wmf: Transmitter on time: t (on-time) = 10 ms

Examiner: Raimund BLASK Date of issue: 9 June 2004 Page 15 of 21

The field strength E was calculated as follows:

Peak E-field: F = U + k (k = antenna factor + cable loss – amplifier gain) Duty cycle correction factor: $D = 20 \log (10 \text{ ms} / 920 \text{ ms}) = -39.7 \text{ dB (Maximum 20 dB)}$

Calculated averaged field: E = F + D

2 highest spurious frequencies:

Freq.:	Peak-	Trans-	Peak-	Duty	Calculated	Limit:	Margin:	Result:
	reading	ducer k:	E-field F:	Cycle D:	averaged		_	
	U:				field E:
