

FCC EVALUATION REPORT FOR CERTIFICATION

Manufacturer : OHSUNG ELECTRONICS CO., LTD

Date of Issue : July 10, 2007

#181 Gongdan-Dong, Gumi, GyeongBuk

Test Report S/N : GETEC-E3-07-056

Republic of Korea

Test Site : Gumi College EMC Center

Attn : Mr. Kwang-Jae Ok / Team Leader of Q.C

FCC ID

OZSURCMRF260

APPLICANT

OHSUNG ELECTRONICS CO., LTD

Rule Part(s) : FCC Part 15 Subpart B

Equipment Class : Communications Receiver used with Part 15 Transmitter (CYY)

EUT Type : RF Receiver

Trade Name : UNIVERSAL remote control

Model No. : MRF-260

This equipment has been shown to be in compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in ANSI C63.4-2003

I attest to the accuracy of data. All measurements reported herein were performed by me or were made under my supervision and are correct to the vest of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

2. Introduction

The measurement procedure described in American National Standard for Methods of Measurement of Radio-Nose Emissions From Low-Voltage Electrical and Electronic Equipment in the Range of 9kHz to 40GHz (ASNI C63.4-2003) was used in determining radiated and conducted emissions emanating from **OHSUNG ELECTRONICS CO., LTD. RF Receiver (Model No.: MRF-260)**

These measurement tests were conducted at **Gumi College EMC Center**.

The site address is 407, Bugok-Dong, Gumi-si, Gyeongsangbuk-Do, Korea

This test site is one of the highest point of Gumi 1 college at about 200 kilometers away from Seoul city and 40 kilometers away from Daege city. It is located in the valley surrounded by mountains in all directions where ambient radio signal conditions are quiet and a favorable area to measure the radio frequency interference on open field test site for the computing and ISM devices manufactures. The detailed description of the measurement facility was found to be in compliance with the requirements of §2.948 according to ANSI C63.4 on October 19, 1992

Fig 1. The map above shows the Gumi College in vicinity area.

3. Product Information

3.1 Description of EUT

The Equipment Under Test (EUT) is the **OHSUNG ELECTRONICS CO., LTD. RF Receiver (Model No.: MRF-260) FCC ID.:OZ5URCMRF260**

This EUT can receiver RF data from RF transmitter and transmit IR signal.

AC/DC Adapter	: D9300(UNIVERSAL remote control) Input: AC 120V 60Hz/9W Output: DC 9V, 300mA
RF Receiving Frequency	: 418MHz
External Connector	: DC in, IR output
RF module	: PLCFH0806A (OH SUNG ELECTRONICS CO.,LTD)
Crystal, Clock Frequency	: 4MHz on Main B'D 6.364063MHz on RF MODULE B'D
Number of Layer	: Main B'd:2 Layer RF B'd:2 Layer

Test Configuration

3.2 Support Equipment / Cables used

3.2.1 Used Support Equipment

Description	Manufacturer	Model No.	S/N & FCC ID
RF Transmitter	OH SUNG Electronics Inc	MX-3000i	S/N: N/A FCC ID: OZ5URCMX3000I

See "Appendix E – Test Setup Photographs" for actual system test set-up

3.2.2 Used Cable(s)

Cable No.	Condition	Description
Adapter cable	Connected to the EUT	1.8m unshielded
IR output cable	Connected to the EUT and RF Receiver	3.0m unshielded

3.3 Modification Item(s)

- None

4. Description of tests

4.1 Test Condition

The EUT was installed, arranged and operated in a manner that is most representative of equipment as typically used. The measurements were carried out while varying operating modes and cable positions within typically arrangement to determine maximum emission level.

The representative and worst test mode(s) were noted in the test report.

- Test Voltage / Frequency : AC 120V/ 60Hz

- Test Mode(s)
 - . Radiated Emission: RF Receiving mode (EUT with MX-3000i)
 - Stand by mode (EUT only)
 - RF Transmitting mode (MX-3000i only)
 - . Conducted Emission: RF Receiving mode

4.2 Conducted Emission

The Line conducted emission test facility is inside a 4×8×2.5 meter shielded enclosure.

The EUT was placed on a non-conducting 1.0 by 1.5 meter table, which is 0.8 meters in height and 0.4 meters away from the vertical wall of the shielded enclosure.

The EUT is powered from the Rohde & Schwarz LISN (ESH2-Z5) and the support equipment is powered from the Rohde & Schwarz LISN (ESH3-Z5). Powers to the LISN are filtered by high-current high insertion loss power line filter.

Sufficient time for EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition.

The RF output of the LISN was connected to the EMI test receiver (Rohde & Schwarz, ESCS30).

The EMI test receiver was scanned from 150kHz to 30MHz with 20msec sweep time to determine the frequency producing the maximum EME from the EUT. The frequency producing the maximum level was re-examined using Quasi-Peak mode of the EMI test receiver.

The bandwidth of Quasi-peak mode was set to 9kHz. Each emission was maximized consistent with typical applications by varying the configuration of the test sample. Interface cables were connected to the available interface ports of the test unit. The effect of varying the position of cables was investigated to find the configuration that produces maximum diagram emission. Excess cable lengths were bundled at center with 30 – 40 centi-meters.

Each EME reported was calibrated using the R/S signal generator

Fig 2. Impedance of LISN

4.3 Radiated Emission

Preliminary measurements were conducted 3m semi anechoic chamber using broadband antennas to determine the frequency producing the maximum EME. Appropriate precaution was taken to ensure that all EME from the EUT were maximized and investigated. The technology configuration, mode of operation and turntable azimuth with respect to antenna was note for each frequency found.

The spectrum was scanned from 30 to 1000MHz using bicornical log antenna (Schwarzbeck, VULB9160). Above 1GHz, horn antenna (Schwarzbeck, BBHA9120D) was used.

Final measurements were made outdoors at 3m/10m-test range.

Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition.

Each frequency found during pre-scan measurements was re-examined and investigated using EMI test receiver. The detector function was set to CISPR quasi-peak mode average mode and the bandwidth of the receiver was set to 120kHz or 1MHz depending on the frequency or type of signal.

The EUT, support equipment and interconnecting cables were reconfigured to the setup producing the maximum emission for the frequency and were placed on top of a 0.8m high non-metallic 1.0×1.5 meter table.

The turntable containing the test sample was rotated; the antenna height was varied 1 to 4 meter and stopped at the azimuth or height producing the maximum emission.

Each EME reported was calibrated using the R/S signal generator

Fig 3. Dimensions of Open Site Test Area

5. Conducted Emission

5.1 Operating environment

Temperature : 25°C
Relative humidity : 43 %

5.2 Test set-up

The conducted emission measurements were performed in the shielded room.

The EUT was placed on wooden table, 0.8m heights above the floor, 0.4m from the reference ground plane (GRP) wall and 0.8m from AMN.

AMN is bonded on horizontal reference ground plane.

The ground plane, which was electrically bonded to the shield room, ground system and all power lines entering the shield room, were filtered.

5.3 Measurement uncertainty

The measurement uncertainty was calculated in accordance with ISO "Guide to the expression of uncertainty in measurement".

The measurement uncertainty was given with a confidence of 95%.

Contribution	Probability Distribution	Uncertainty (\pm dB)	
		Power Port	Communication port
Receiver specification	Rectangular	0.50	0.50
LISN coupling specification	Rectangular	1.50	
ISN coupling specification	Rectangular		1.50
Mismatch LISN VRC : $\Gamma_{l=}$ 0.20 ISN VRC : $\Gamma_{l=}$ 0.20 ATT VRC(IN) : $\Gamma_{g=}$ 0.03 Uncertainty limits $20\log(1 \pm \Gamma_{l=} \Gamma_{g=})$	U-shaped	0.05 -0.05	0.05 -0.05
Mismatch Receiver VRC : $\Gamma_{l=}$ 0.09 ATT VRC : $\Gamma_{g=}$ 0.11 Uncertainty limits $20\log(1 \pm \Gamma_{l=} \Gamma_{g=})$	U-shaped	0.09 -0.09	0.09 -0.09

6. Radiated Emission

6.1 Operating environment

Temperature : 26°C
Relative humidity : 52 %

6.2 Test set-up

A preliminary scan with peak mode was performed in the semi anechoic chamber using the procedure in ANSI C63.4/2003 13.1.4.1 and found frequency for open area test site.

The formal radiated emission was measured at 3m-distance open area test site.

The EUT was placed on a non-conductive turntable approximately 0.8 meters above the ground plane.

The turntable with EUT was rotated 360°, and the antenna was varied in height between 1.0 and 4.0 meters in order to determine the maximum emission levels.

This procedure was performed for both horizontal and vertical polarization of the receiving antenna.

6.3 Measurement uncertainty

The measurement uncertainty was calculated in accordance with ISO “Guide to the expression of uncertainty in measurement”.

The measurement uncertainty was given with a confidence of 95%.

Contribution	Probability Distribution	Uncertainty (dB)			
		Biconical Ant.		Log-periodic Ant.	
		3m	10m	3m	10m
Ambient signal

8. Sample Calculations

$$\begin{aligned} \text{dB}\mu\text{V} &= 20 \text{ Log}_{10}(\mu\text{V}/\text{m}) \\ \text{dB}\mu\text{V} &= \text{dBm} + 107 \\ \mu\text{V} &= 10^{(\text{dB}\mu\text{V}/20)} \end{aligned}$$

8.1 Example 1 :

■ 20.3 MHz

Class B Limit	=	250 μV	=	48 $\text{dB}\mu\text{V}$
Reading	=	- 67.8 dBm (Calibrated level)		
Convert to $\text{dB}\mu\text{V}$	=	- 67.8 $\text{dBm} + 107$	=	39.2 $\text{dB}\mu\text{V}$
$10^{(39.2\text{dB}\mu\text{V}/20)}$	=	91.2 μV		
Margin	=	39.2 - 48	=	-8.8
	=	8.8 dB below Limit		

8.2 Example 2 :

■ 66.7 MHz

Class B Limit	=	100 $\mu\text{V}/\text{m}$	=	40.0 $\text{dB}\mu\text{V}/\text{m}$
Reading	=	- 76.0 dBm (Calibrated level)		
Convert to $\text{dB}\mu\text{V}/\text{m}$	=	- 76.8 $\text{dBm} + 107$	=	31.0 $\text{dB}\mu\text{V}/\text{m}$
Antenna Factor + Cable Loss	=	5.8 dB		
		Total	=	36.8 $\text{dB}\mu\text{V}/\text{m}$
Margin	=	36.8 - 40.0	=	-3.2
	=	3.2 dB below Limit		

9. Recommendation & conclusion

The data collected shows that the Gumi College EMC Center.

OH SUNG ELECTRONICS CO., LTD. RF Receiver (Model No.: MRF-260) was complies with §15.107, 15.109 and §15.111 of the FCC Rules.
