OHSUNG ELECTRONICS CO., LTD

Rule Part(s): FCC Part 15 Subpart B-Unintentional Radiator § 15.107, § 15.109
FCC Part 15 Subpart C-Intentional Radiator § 15.231Equipment Class: Remote Control Transmitter (DSC)
: RF Remote Controller

Trade Name : UNIVERSAL remote control

Model No. : MX-810i

This equipment has been shown to be in compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in ANSI C63.4-2003

I attest to the accuracy of data. All measurements reported herein were performed by me or were made under my supervision and are correct to the vest of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

Tested by,

Jae-Hoon Jeong, Senior Engineer GUMI College EMC center

- Dates of Issue November 28, 2007

2. Introduction

The measurement procedure described in American National Standard for Methods of Measurement of Radio-Nose Emissions From Low-Voltage Electrical and Electronic Equipment in the Range of 9kHz to 40GHz (ASNI C63.4-2003) was used in determining radiated and conducted emissions emanating from **OHSUNG ELECTRONICS CO.**, **LTD. RF Remote Controller (Model No.: MX-810i)**

These measurement tests were conducted at **Gumi College EMC Center**.

The site address is 407, Bugok-Dong, Gumi-si, Gyeongsangbuk-Do, Korea

This test site is one of the highest point of Gumi 1 college at about 200 kilometers away from Seoul city and 40 kilometers away from Daege city. It is located in the valley surrounded by mountains in all directions where ambient radio signal conditions are quiet and a favorable area to measure the radio frequency interference on open field test site for the computing and ISM devices manufactures. The detailed description of the measurement facility was found to be in compliance with the requirements of \$2.948 according to ANSI C63.4 on October 19, 1992

3. Product Information

3.1 Description of EUT

The Equipment Under Test (EUT) is the OHSUNG ELECTRONICS CO., LTD. RF Remote Controller (Model No.: MX-810i) FCC ID.:OZ5URCMX810I

| Power Supply | Lithium Ion rechargeable (battery included) 3.7V 1100mAh / 0.2CmA |
|--|--|
| Memory | 32 Megabits of Flash Memory Total |
| IR Output Drive | 700±50 ^{mA} mA maximum |
| Infrared Frequency Transmission Range | 15kHz ~ 460kHz |
| Transmission method | Narrow Band RF |
| RF Freq | 433.92 MHz |
| Rated RF output | 80dBuV under |
| Frequency range | 433.92 (±0.5)MHz |
| No. of channel | One |
| Modulation method | оок |
| Antenna type & Characteristic | Type : PCB Antenna Gain : Unity VSWR : Less Than 2 Polarization : Horizontal Impedance : 50Ω |
| Dimensions (W x H x D) | 8.9" x 2.4" x 1" |
| LCD Size | 2" Active Matrix color LCD |
| Weight | 6.9 ounces (with battery loaded) |
| Warranty | 1 year parts & labor when purchased from an authorized dealer |

-. User AC/DC Adapter

: TESA5G1-051200D(UNIVERTIAL Remote control) Input: AC 100-240V, 50/60Hz 2.0A Output: DC 5V, 1.0A

3.2 Support Equipment / Cables used

3.2.1 Used Support Equipment

| Description | Manufacturer | Model No. | S/N & FCC ID |
|--------------|-----------------|-------------|--------------------------------------|
| Serial mouse | LOGITECH | M-S69 | S/N: 334684-108 FCC ID: JNZ211443 |
| Notebook PC | COMPAQ | ARMADA E500 | S/N: PP2060 FCC ID: DoC |
| Printer | Hewlett Packard | 970CXI | S/N: MY9B01F1FG FCC ID: DoC |

See "Appendix E – Test Setup Photographs" for actual system test set-up

3.2.2 Used Cable(s)

| Cable No. | Condition | Description |
|---------------|--------------------------------------|--------------------------------------|
| Adapter cable | Connected to the EUT | 1.8m Unshielded |
| USB cable | Connected to the EUT and Notebook PC | 1.2m Shielded with two ferrite cores |

3.3 Modification Item(s)

-. None

4. Description of tests

4.1 Test Condition

The EUT was installed, arranged and operated in a manner that is most representative of equipment as typically used. The measurements were carried out while varying operating modes and cable positions within typically arrangement to determine maximum emission level.

The representative and worst test mode(s) were noted in the test report.

Test Voltage / Frequency: DC 3.7V supplied from Li-ion rechargeable battery

- Test Mode(s)
 - -. RF mode: RF transmitting mode
 - -. IR mode : IR transmitting mode
 - -. Download mode: Continuous downloading mode via USB with a software.

5. Antenna Requirement - §15.203

An intentional radiator antenna shall be designed to ensure that no antenna other than that furnished by the applicant can be used with the device. The use of permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with this requirement.

5.1 Description of Antenna

The **OHSUNG ELECTRONICS CO., LTD RF Transmitter Universal Remote Control** comply with the requirement of \$15.203 with a built-in looped antenna permanently attached to the transmitter.

5.2 Conducted Emission

The Line conducted emission test facility is inside a $4 \times 8 \times 2.5$ meter shielded enclosure.

The EUT was placed on a non-conducting 1.0 by 1.5 meter table, which is 0.8 meters in height and 0.4 meters away from the vertical wall of the shielded enclosure.

The EUT is powered from the Rohde & Schwarz LISN (ESH2-Z5) and the support equipment is powered from the Rohde & Schwarz LISN (ESH3-Z5). Powers to the LISN are filtered by high-current high insertion loss power line filter.

Sufficient time for EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition.

The RF output of the LISN was connected to the EMI test receiver (Rohde & Schwarz, ESCS30).

The EMI test receiver was scanned from 150kHz to 30MHz with 20msec sweep time to determine the frequency producing the maximum EME from the EUT. The frequency producing the maximum level was re-examined using Quasi-Peak mode of the EMI test receiver.

The bandwidth of Quasi-peak mode was set to 9kHz. Each emission was maximized consistent with typical applications by varying the configuration of the test sample. Interface cables were connected to the available interface ports of the test unit. The effect of varying the position of cables was investigated to find the configuration that produces maximum diagram emission. Excess cable lengths were bundled at center with 30 - 40 centi-meters. Each EME reported was calibrated using the R/S signal generator

Fig 2. Impedance of LISN

5.3 Radiated Emission

Preliminary measurements were conducted 3m semi anechoic chamber using broadband antennas to determine the frequency producing the maximum EME. Appropriate precaution was taken to ensure that all EME from the EUT were maximized and investigated. The technology configuration, mode of operation and turntable azimuth with respect to antenna was note for each frequency found.

The spectrum was scanned from 30 to 1000MHz using bicornical log antenna (Schwarzbeck, VULB9160). Above 1GHz, horn antenna (Schwarzbeck, BBHA9120D) was used.

Final measurements were made outdoors at 3m/10m-test range.

Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition.

Each frequency found during pre-scan measurements was re-examined and investigated using EMI test receiver. The detector function was set to CISPR quasi-peak mode average mode and the bandwidth of the receiver was set to 120kHz or 1MHz depending on the frequency or type of signal.

The EUT, support equipment and interconnecting cables were reconfigured to the setup producing the maximum emission for the frequency and were placed on top of a 0.8m high non-metallic 1.0×1.5 meter table.

The turntable containing the test sample was rotated; the antenna height was varied 1 to 4 meter and stopped at the azimuth or height producing the maximum emission.

Each EME reported was calibrated using the R/S signal generator

Fig 3. Dimensions of Open Site Test Area

5.4 Duty Cycle Correction

millisecond period.

Measurements may be adjusted where pulsed RF is utilized to find the average level associated with a quantity. This calculation is applied to limits for pulsed licensed and unlicensed devices. For unlicensed intentional radiator under 47CFR Part 15 §15.35, all duty cycle measurements are compared to a 100

On time = N1L1+N2L2+...+NnLn, where N1 is number of type 1 pulses, L1 is length of type 1 pulses, etc. **Duty Cycle = On time/100 millisecond**.

5.5 Occupied Bandwidth

Occupied bandwidth was performed by coupling the output of the EUT to the input of a spectrum analyzer. The bandwidth of the emission shall be no wider than 0.25% of the center frequency for device operating above 70MHz and below 900MHz.For device operating above 900MHz, the emission shall be no wider than 0.5% of the center frequency. The bandwidth is determined at the points 20dB down from the modulated carrier.

6. Conducted Emission

6.1 Operating environment

| Temperature | : | 26 ℃ |
|-------------------|---|-------------|
| Relative humidity | : | 36 % |

6.2 Test set-up

The conducted emission measurements were performed in the shielded room.

The EUT was placed on wooden table, 0.8m heights above the floor, 0.4m from the reference ground plane (GRP) wall and 0.8m from AMN.

AMN is bonded on horizontal reference ground plane.

The ground plane, which was electrically bonded to the shield room, ground system and all power lines entering the shield room, were filtered.

6.3 Measurement uncertainty

The measurement uncertainty was calculated in accordance with ISO "Guide to the expression of uncertainty in measurement".

The measurement uncertainty was given with a confidence of 95%.

| Contribution | Probability | Uncer | rtainty (±dB) |
|---|---------------|------------|--------------------|
| Contribution | Distribution | Power Port | Communication port |
| Receiver specification | Rectangular | 0.50 | 0.50 |

| Relative humidity | : | 42 % |

7.2 Test set-up

The spectrum analyzer was set to Zero span and the video triggered to collect the pulse train of the modulation. Calculations of the duty cycle correction factor were obtained from time data provided by the plots.

7.3 Test equipment used

| | Model Number | Manufacturer | Description | Serial Number | Due to Calibration |
|-----|--------------|-----------------|----------------------|---------------|--------------------|
| ■ - | ESI | Rohde & Schwarz | EMI test receiver | 830482/010 | 12. 14. 2007 |
| ■ - | HL223 | Rohde & Schwarz | Log-periodic antenna | 829228/011 | 11. 27. 2007 |

7.4 Test result of Duty Cycle

| Test Date | : November 28, 2007 |
|------------------------------------|---------------------------------|
| Reference standard | : Part 15 Subpart C, Sec. 15.35 |
| Operating condition | : RF transmitting mode |
| Spectrum resolution bandwidth(6dB) | : 100 kHz |
| Power Source | : AC 120V, 60Hz |

- -. Number of Code groups per 100ms = 1
- -. Number of Wide Pulse = 335
- -. Width of Pulses = 0.006ms
- -. Number of Narrow Pulse = 693
- -. Width of Pulses =0.006ms

Calculation of duty cycle

- -. Total width of pulse train : $335x \ 0.006ms + 693 \ x \ 0.006ms = 6.17ms$
- -. Duty Cycle (%) : 6.17ms / 100ms = 6.17%

-. Duty Cycle (dB) : -24.20dB

| Fundamental Frequency | Total width of ON-Time | Duty Cycle (%) | Duty Cycle (dB) |
|-----------------------|------------------------|----------------|-----------------|
| 433.92 MHz | 6.17 ms | 6.17% | -24.20dB |

Refer to APPENDIX B: Test Plots of complete Pulse Train

8. Radiated Emission

8.1 Operating environment

| Temperature | : | 11 °C |
|-------------------|---|-------|
| Relative humidity | : | 42 % |

8.2 Test set-up

A preliminary scan with peak mode was performed in the semi anechoic chamber using the procedure in ANSI C63.4/2003 13.1.4.1 and found frequency for open area test site.

The formal radiated emission was measured at 3m-distance open area test site.

The EUT was placed on a non-conductive turntable approximately 0.8 meters above the ground plane.

The turntable with EUT was rotated 360°, and the antenna was varied in height between 1.0 and 4.0 meters in order to determine the maximum emission levels.

This procedure was performed for both horizontal and vertical polarization of the receiving antenna.

8.3 Measurement uncertainty

The measurement uncertainty was calculated in accordance with ISO "Guide to the expression of uncertainty in measurement".

The measurement uncertainty was given with a confidence of 95%.

9. Occupied Bandwidth Measurement

9.1 Operating environment

| Temperature | : | 11 °C |
|-------------------|---|-------|
| Relative humidity | : | 42 % |

9.2 Test set-up

This measurement is performed with the antenna located close enough to give a full-scale deflection of the modulated carrier on the spectrum analyzer. The plot is taken at 200kHz/division frequency span, 100kHz 3dB resolution bandwidth and 5dB/division logarithmic display from an ESI spectrum analyzer.

The measuring bandwidth shall be set to a value greater than 5% of the allowed bandwidth(ANSI C63.4-1992 I6)

9.3 Limit

| Frequency Range(MHz) | Occupied Bandwidth Limit |
|----------------------|--------------------------|
| 70 ~ 900 MHz | 0.25% |
| >900 MHz | 0.5% |

9.4 Test equipment used

| _ | Model Number | Manufacturer | Description | Serial Number | Due to Calibration |
|-----|--------------|-----------------|----------------------|---------------|--------------------|
| ■ - | ESI | Rohde & Schwarz | EMI test receiver | 830482/010 | 12. 14. 2007 |
| ■ - | HL223 | Rohde & Schwarz | Log-periodic antenna | 829228/011 | 11. 27. 2007 |

9.5 Test result of occupied bandwidth

| : November 28, 2007 |
|---|
| : Part 15 Subpart C, Sec. 15.231 |
| : RF transmitting mode |
| : 100 kHz |
| : DC 3.7V supplied from Li-ion rechargeable battery |
| |

Allowed Bandwidth : $433.92 \times 0.0025 = 1084.8 \text{ kHz}$

| Fundamental Frequency | Bandwidth | Allowed Bandwidth | Result |
|-----------------------|------------|-------------------|--------|
| 433.92 MHz | 789.57 kHz | 1084.8 kHz | PASS |

Refer to APPENDIX B: Test Plots of occupied bandwidth

10. Sample Calculations

$$\label{eq:masses} \begin{split} dB\mu V &= 20 \ Log \ _{10}(\mu V/m) \\ dB\mu V &= dBm + 107 \\ \mu V &= 10 \ ^{(dB\mu V/20)} \end{split}$$

10.1 Example 1 :

■ 20.3 MHz

| Class B Limit | $= 250 \ \mu V \qquad = 48 \ dB \mu V$ |
|-------------------------|--|
| Reading | = - 67.8 dBm(Calibrated level) |
| Convert to dBµV | $= -67.8 \text{ dBm} + 107 = 39.2 \text{ dB}\mu\text{V}$ |
| $10^{(39.2dB\mu V/20)}$ | $= 91.2 \mu V$ |
| Margin | = 39.2 - 48 = -8.8 |
| | = 8.8 dB below Limit |

10.2 Example 2 :

■ 66.7 MHz

| Class B Limit | $= 100 \ \mu V/m \qquad = 40.0 \ dB \mu V/m$ |
|-----------------------|--|
| Reading | = - 76.0 dBm(Calibrated level) |
| Convert to dBµV/m | $= -67.8 \text{ dBm} + 107 = 31.0 \text{ dB}\mu\text{V/m}$ |
| Antenna Factor + Cabl | e Loss = $5.8 \mathrm{dB}$ |
| | Total = $36.8 \text{ dB}\mu\text{V/m}$ |
| Margin | = 36.8 - 40.0 = -3.2 |
| | = 3.2 dB below Limit |

11. Recommendation & conclusion

The data collected shows that the Gumi College EMC Center.

OH SUNG ELECTRONICS CO., LTD. RF Remote Controller (Model No.: MX-810i) was complies with \$15.107, \$15.109 and \$15.231 of the FCC Rules.
