To Whom It May Concern:

Class 2 Permissive Change Application Tantalus TUNet 3205 (OZFR22002)

This is an application for a Class II permissive change to add an optional external antenna port to the RF modem portion TUNet 3205 product.

This external antenna port was previously provided for test purposes only, but this class 2 change will allow OZFR22002 to accept an external antenna. All other aspects of the existing product, i.e. the RF output power at the antenna port, the schematic, the PCB layout and RF shielding etc, do not change. Therefore the current results in the existing test report still apply.

Sincerely,

B. Pearce
RF Design Engineer
