To Whom It May Concern:

A new data rate has been created for the Demand Response communication module (FCC ID: OZFRT900). The maximum possible transmit duty cycle is 35 times less than the other data rates that the device has been certified to operate at. Since the RF output power is identical (no hardware changes have been made) and the transmit duty cycle for this data rate is lower, then it means that the original RF exposure data and the user manual contain pertinent information and new exhibits are not required when it operates with this new data rate.

A handwritten signature in black ink, appearing to read "M. Fairburn", is positioned above the typed name.

Mark Fairburn  
RF Design Engineer
