

Response to TCB Findings

1. The AC line conducted emissions is applicable to the host unit required by 15.207(c) while the transmitter is operating. Please supply test data

Supplied. Please see "Conducted Emissions Test Data" document.

2. Host unit AC input voltage should be varied from 85% to 115% and radiated field strength of the fundamental emission should be checked as required by 15.31(e).

Supplied. Please see "Conducted Emissions Test Data" document.
