

Product Name: UNIV Tritton Headset Wireless Stereo Kunai (dongle)

Model Number: 90630R

FCCID: P25S790630AR

RADIO FREQUENCY EXPOSURE COMPLIANCE RESULT :

PASS Test standard : According to 447498 D01 General RF Exposure Guidance v05

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [vf(\text{GHz})] \leq 3.0 \text{ for 1-g SAR and } \leq 7.5 \text{ for 10-g extremity SAR, where}$

$f(\text{GHz})$ is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation

The result is rounded to one decimal place for comparison

$$eirp = pt \times gt = (Exd)^2 / 30$$

where:

pt = transmitter output power in watts,

gt = numeric gain of the transmitting antenna (unitless),

E = electric field strength in V/m, --- $10^{(\text{dBuV/m})/20} / 10^6$

d = measurement distance in meters (m)---3m

$$\text{So } pt = (Exd)^2 / 30 \times gt$$

Field strength =99.85dBuV/m @3m

Ant gain =0dBi

$$\text{So } pt = \{ [10^{(99.85/20)} / 10^6 \times 3]^2 / 30 \times 1 \} \times 1000 \text{ mW} = 2.898 \text{ mW}$$

$$\text{So } (2.898 \text{ mW} / 5\text{mm}) \times \sqrt{2.476} = 0.912 < 3$$

Then SAR evaluation is not required
