Abstract

This report has been prepared on behalf of Mad Catz, Inc. to support the attached Application for Equipment Authorization. The test report and application are submitted for a Low Powered Transceiver under Part 15.249 of the FCC Rules and Regulations. This Federal Communication Commission (FCC) Certification Test Report documents the test configuration and test results for a Mad Catz, Inc. Model 8246 (D2038P) Lynx Wireless Controller.

Testing was performed on an Open Area Test Site (OATS) of Washington Laboratories, Ltd, 7560 Lindbergh Drive, Gaithersburg, MD 20879. Site description and site attenuation data have been placed on file with the FCC's Sampling and Measurements Branch at the FCC laboratory in Columbia, MD. Washington Laboratories, Ltd. has been accepted by the FCC and approved by NIST NVLAP (NVLAP Lab Code: 200066-0) as an independent FCC test laboratory.

The Mad Catz, Inc. Model 8246 (D2038P) Lynx Wireless Controller complies with the limits for a Low Powered Transceiver device under Part 15.249 of the FCC Rules and Regulations.

1 Introduction

1.1 Compliance Statement

The Mad Catz, Inc. Model 8246 (D2038P) Lynx Wireless Controller complies with the limits for a Low Powered Transceiver device under Part 15.249 of the FCC Rules and Regulations.

1.2 Test Scope

Tests for radiated emissions were performed. All measurements were performed according to the 1992 version of ANSI C63.4. The measurement equipment conforms to ANSI C63.2 Specifications for Electromagnetic Noise and Field Strength Instrumentation.

1.3 Contract Information

Customer (USA): Mad Catz, Inc.
 7480 Mission Valley Road
 San Diego, CA 92108

Customer (Asia)
(Grantee Holder) Mad Catz (Asia) Ltd.
 Unit 1717-19, 17/F., Grand Central Plaza,
 Tower 2, 138 Shatin Rural Committee Road,
 Shatin, Hong Kong

Purchase Order Number: 021003-01

Quotation Number: 60637

1.4 Test Dates

Testing was performed from February 12, 2003 to February 17, 2003.

2 Equipment Under Test

2.1 EUT Identification & Description

The Mad Catz, Inc. Model 8246 (D2038P) Lynx Wireless Controller is part of the wireless controller system for the Sony™ PlayStation 2® video game system. The D2038P Wireless Controller replaces the hard-wired controller, and transmits and receives play commands to the Mad Catz system interface (the D2038H Host, separate certification, FCC ID: P25WSMC8246B1103R).

The RF controller pad is battery powered and has 4 selectable channels. Channels are selectable via a slide switch on the controller. Table 1 lists the channels and frequencies along with other characteristics.

Table 1. Device Summary

| ITEM | DESCRIPTION |
|-------------------------|--|
| Manufacturer: | Mad Catz, Inc. |
| FCC ID Number | P25WSMC8246B1103C |
| EUT Name: | Lynx Wireless Controller |
| Model: | Model 8246 (D2038P) |
| FCC Rule Parts: | §15.249 |
| Frequency Range: | 906 MHz to 926.5 MHz: CH1 ~906M, CH2 ~926.5M, CH3 ~920M and CH4 ~913MHz |
| Maximum Output Power: | <1mW |
| Modulation: | FSK |
| Occupied Bandwidth: | 223.5kHz |
| Keying: | Manual |
| Type of Information: | Control |
| Number of Channels: | 4 |
| Power Output Level | Fixed |
| Antenna Type | Fixed/Integral |
| Interface Cables: | None |
| Power Source & Voltage: | 3Vdc from batteries |

2.2 Test Configuration

The Model 8246 (D2038P) Controller was configured with a Sony PlayStation 2 game console, a television set, and a Mad Catz 8246 (D2038H) Host game console interface.

2.3 Testing Algorithm

The Model 8246 (D2038P) Controller was operated continuously by transmitting play commands to the interface/game console.

The D2038P, PlayStation 2 and television were powered on and a game was inserted into the PlayStation 2. Once communication was established the D2028P continuously transmitted to the D2038H (Host) connected to the PlayStation 2 console. All controller

pad buttons were pressed to determine the worst case duty cycle operation. It was verified that there was no difference in duty cycle or bandwidth for pressing different buttons.

Worst case emission levels are provided in the test results data.

2.4 Test Location

All measurements herein were performed at Washington Laboratories, Ltd. test center in Gaithersburg, MD. Site description and site attenuation data have been placed on file with the FCC's Sampling and Measurements Branch at the FCC laboratory in Columbia, MD. Washington Laboratories, Ltd. has been accepted by the FCC and approved by NIST NVLAP (NVLAP Lab Code: 200066-0) as an independent FCC test laboratory.

2.5 Measurements

2.5.1 References

ANSI C63.2 Specifications for Electromagnetic Noise and Field Strength Instrumentation

ANSI C63.4 American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz

Land Mobile FM or PM Communications Equipment Measurement and Performance Standards (ANSI/TIA/EIA-603-93)

2.6 Measurement Uncertainty

All results reported herein relate only to the equipment tested. For the purposes of the measurements performed by Washington Laboratories, the measurement uncertainty is ± 2.3 dB. This has been calculated for a *worst-case situation* (radiated emissions measurements performed on an open area test site).

The following measurement uncertainty calculation is provided:

$$\text{Total Uncertainty} = (A^2 + B^2 + C^2)^{1/2}/(n-1)$$

where:

A = Antenna calibration uncertainty, in dB = 2 dB

B = Spectrum Analyzer uncertainty, in dB = 1 dB

C = Site uncertainty, in dB = 4 dB

n = number of factors in uncertainty calculation = 3

Thus, Total Uncertainty = $0.5 (2^2 + 1^2 + 4^2)^{1/2} = \pm 2.3$ dB.

3 Test Equipment

Table 2 shows a list of the test equipment used for measurements along with the calibration information.

Table 2: Test Equipment List

4 Test Results

4.1 Duty Cycle Correction

Measurements may be adjusted where pulsed RF is utilized to find the average level associated with a quantity. This calculation is applied to limits for pulsed licensed and unlicensed devices.

On time = $N_1L_1 + N_2L_2 + \dots + N_{N-1}L_{N-1} + N_NL_N$, where N_1 is number of type 1 pulses, L_1 is length of type 1 pulses, etc.

- For Licensed Transmitters basic formula can be stated as $20\log[\text{Duty Cycle}]$
- For Unlicensed Intentional Radiators under 47CFR Part 15, all duty cycle measurements compared to a 100 millisecond period
- i.e. duty cycle = on time/100 milliseconds or period, whichever is less
- Restating the basic formula:
 - Duty cycle = $(N_1L_1 + N_2L_2 + \dots + N_{N-1}L_{N-1} + N_NL_N)/100$ or T , whichever is less

Where T is the period of the pulse train.

The following Figures show the plots of the modulated carrier. The spectrum analyzer was set to Zero Span and the video triggered to collect the pulse train of the modulation. Calculations of the duty cycle correction factor were obtained from time data provided by the plots.

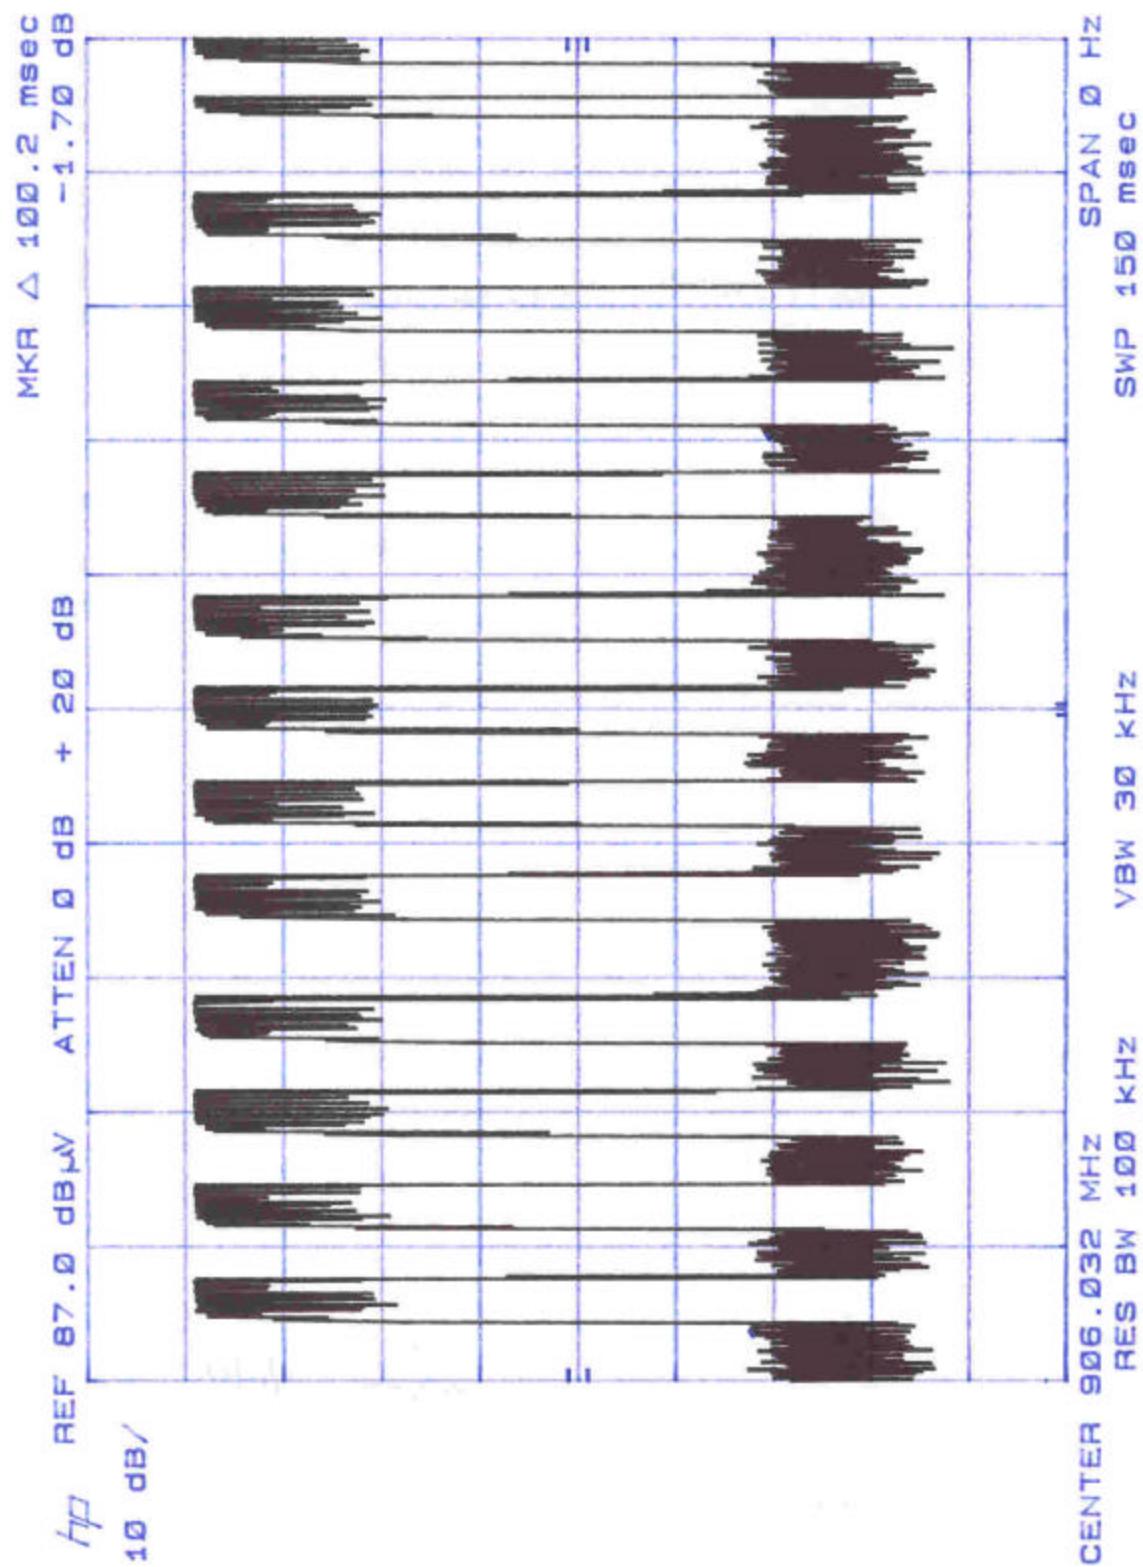

Figure 1. Duty Cycle Plot Full Period

From the data in Figure 1 the following calculations are made.

Pulse Width = 4.92ms

On Time Per 100ms (worst case):

$$9 \times 4.92\text{ms} = 44.28\text{ms}$$

Duty cycle calculation:

$$44.28\text{ms}/100\text{ms} = 44.28\% \text{ on time} = -7.1\text{dB} \text{ duty cycle correction}$$

4.2 Occupied Bandwidth: (FCC Part §2.1049)

Occupied bandwidth was performed by coupling the output of the EUT to the input of a spectrum analyzer.

At full modulation, the occupied bandwidth was measured as shown:

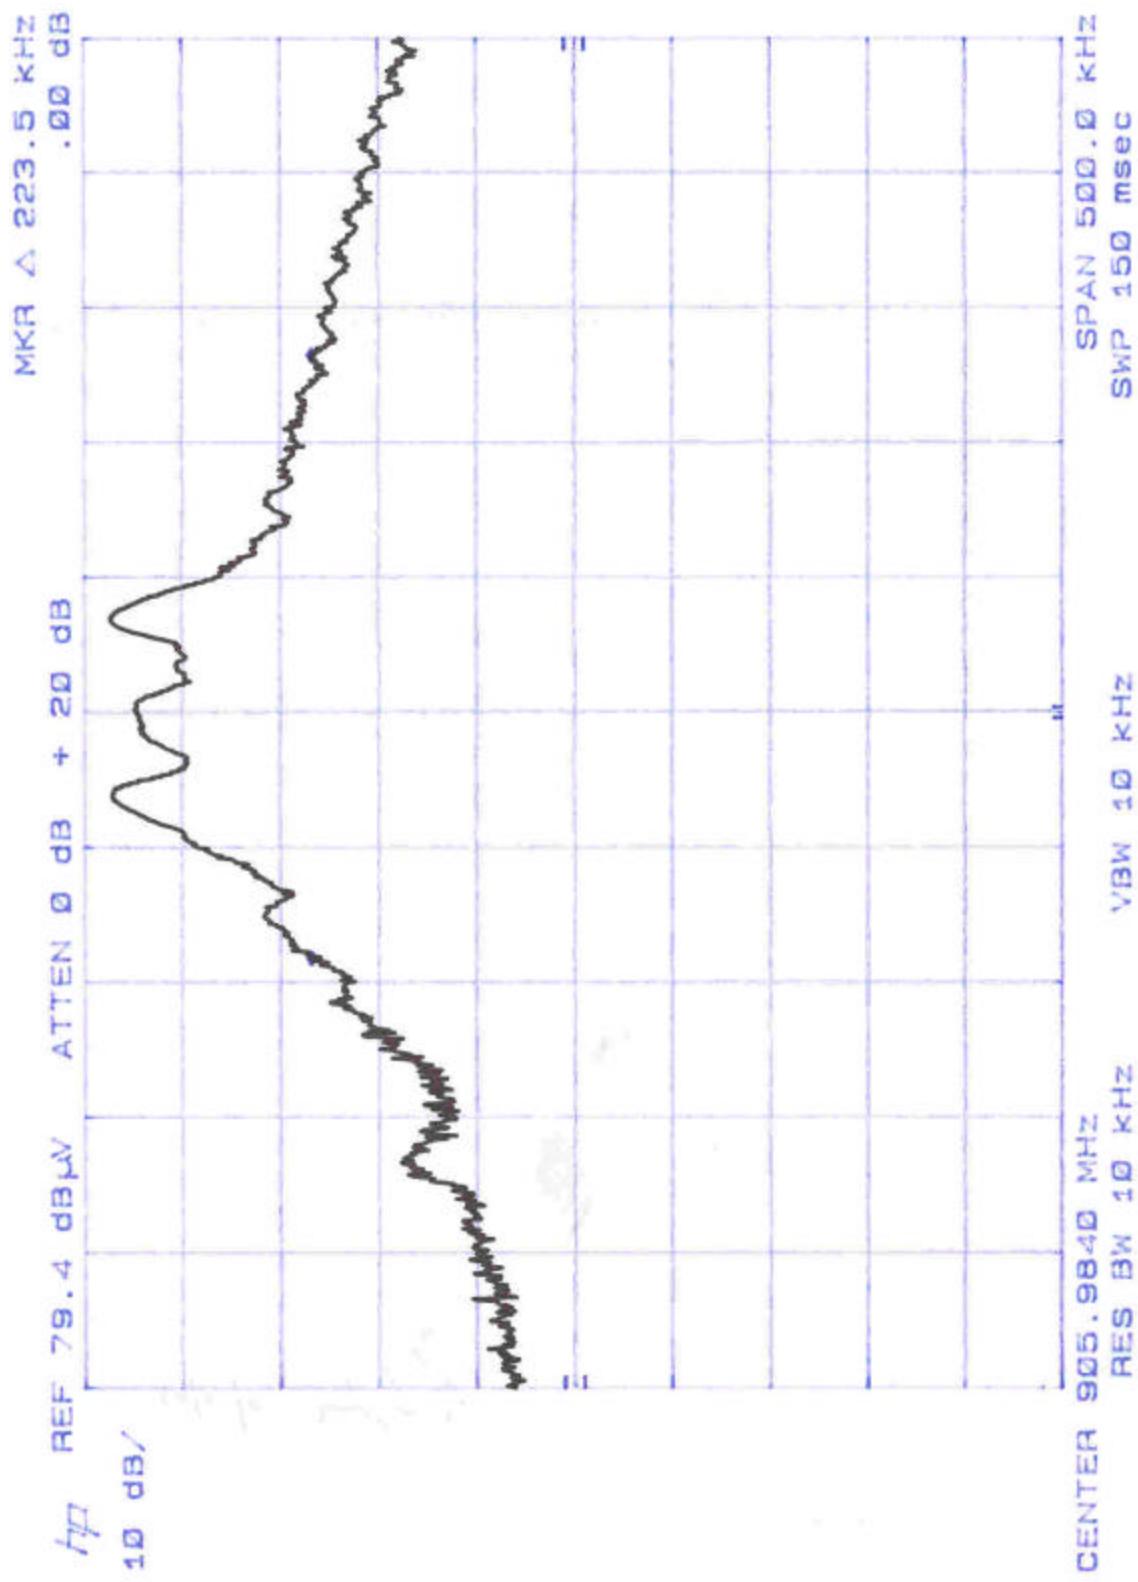

Figure 2. Occupied Bandwidth, Low Channel

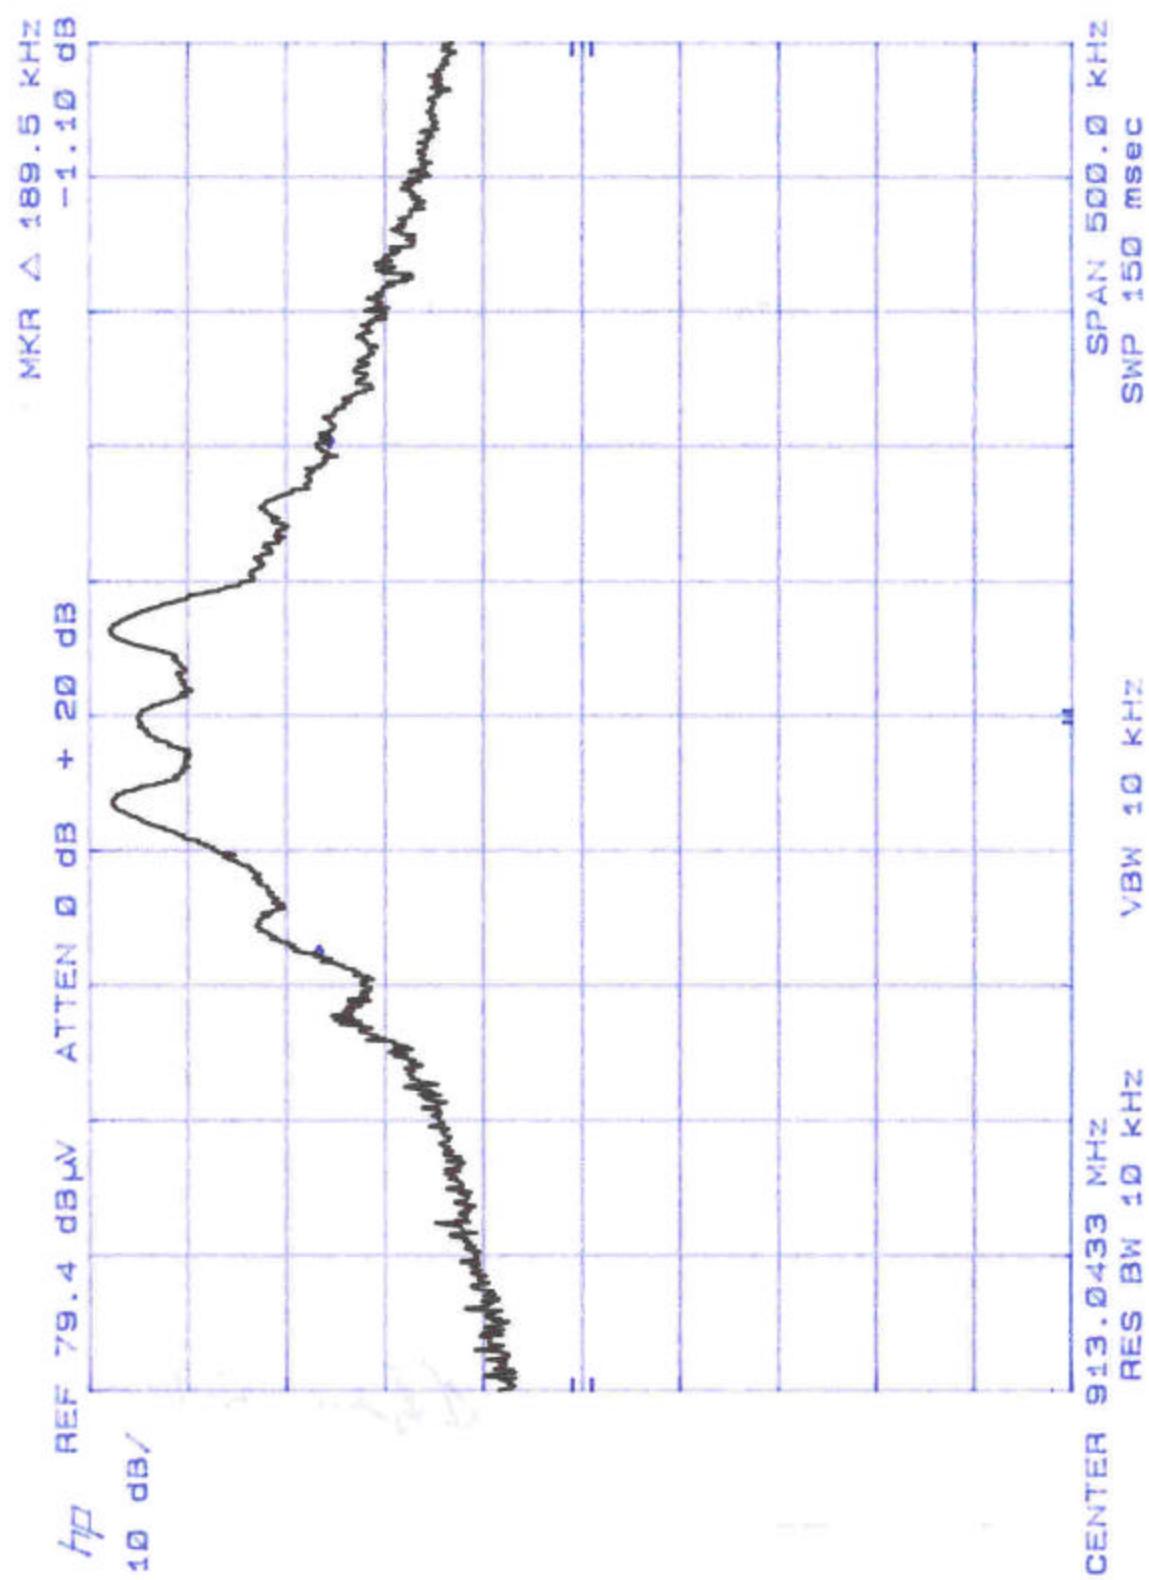

Figure 3. Occupied Bandwidth, Mid Channel

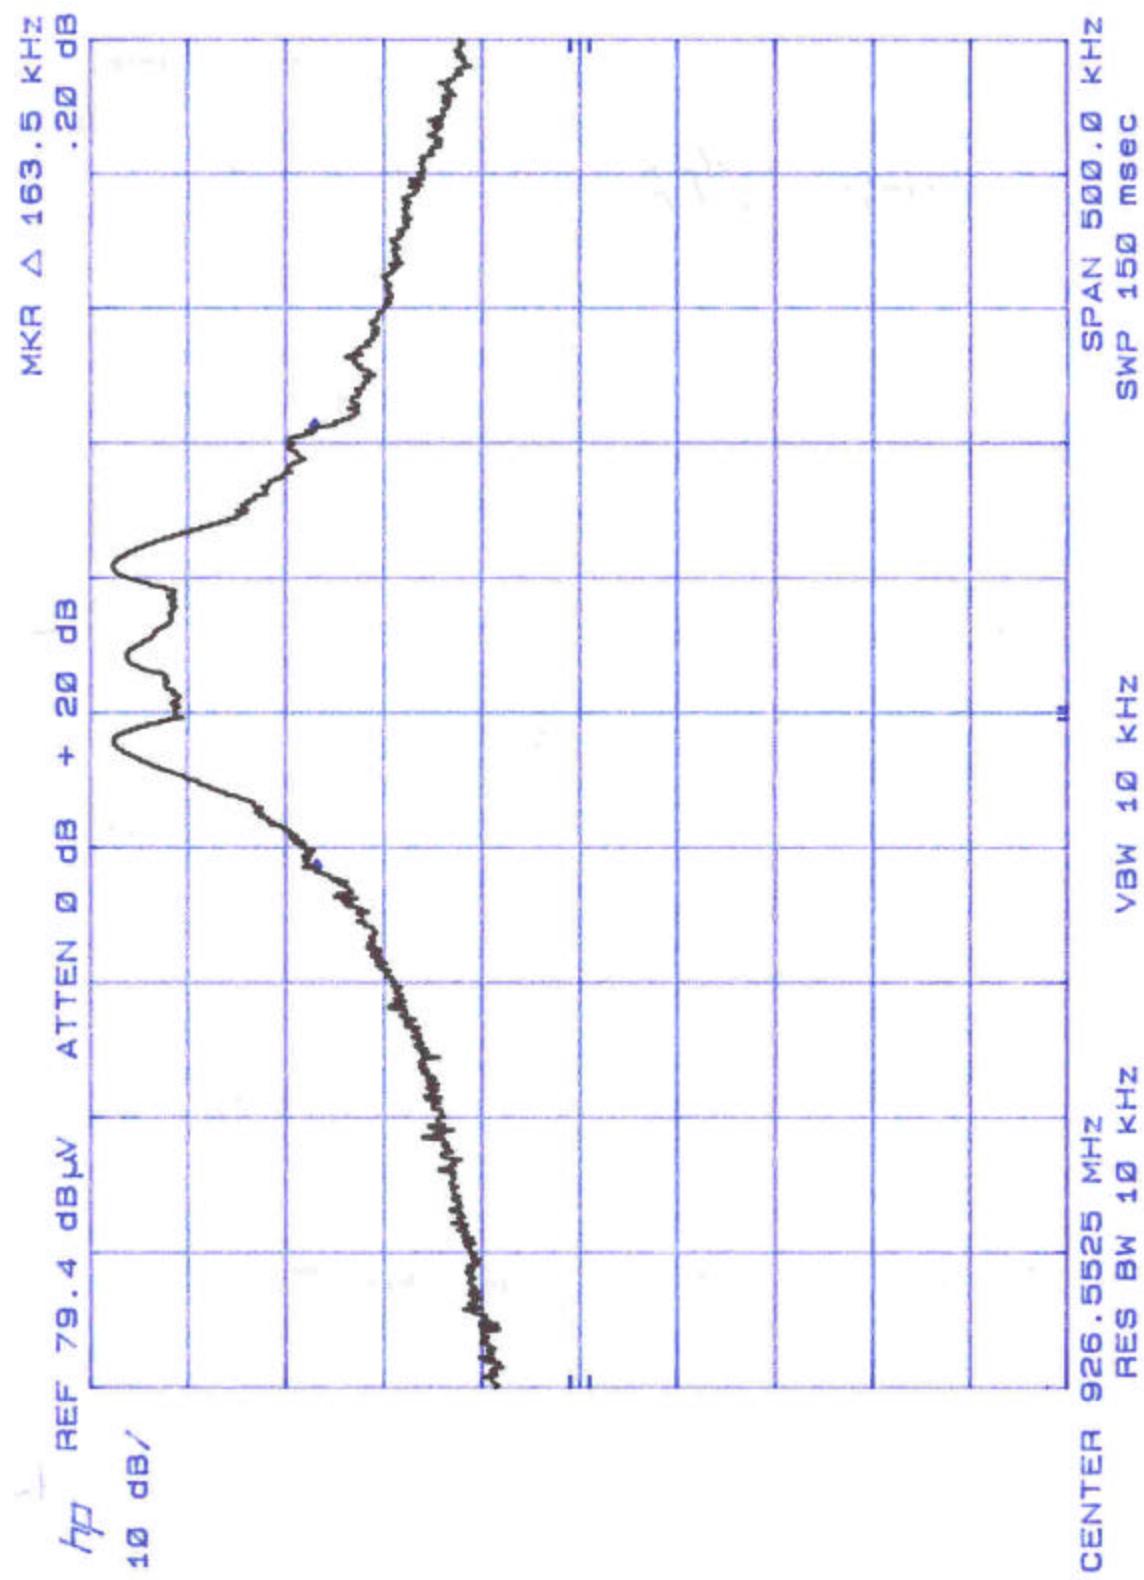

Figure 4. Occupied Bandwidth, High Channel

Table 3 provides a summary of the Occupied Bandwidth Results.

Table 3. Occupied Bandwidth Results

| Frequency | Bandwidth |
|----------------------------|-----------|
| Low Channel 905.984MHz | 223.5kHz |
| Mid Channel 913.043MHz | 189.5kHz |
| High Channel 926.552MHz | 163.5kHz |

4.3 Radiated Emissions: (FCC Part §2.1053)

The EUT must comply with requirements for radiated emissions. The limits are as shown in the following table.

Table 4. Radiated Emissions Limits

| Fundamental Frequency | Field Strength of Fundamental (μV/m) | Field Strength of Harmonics (μV/m) |
|------------------------------|--|--|
| 902 – 928 MHz | 50,000 | 500 |
| 2400 – 2483.5 MHz | 50,000 | 500 |
| 5725 – 5875 MHz | 50,000 | 500 |
| 24.00 – 24.25 MHz | 250,000 | 2500 |

4.3.1 Test Procedure

The EUT was placed on motorized turntable for radiated testing on a 3-meter open field test site. The emissions from the EUT were measured continuously at every azimuth by rotating the turntable. Receiving antennas were mounted on an antenna mast to determine the height of maximum emissions. The height of the antenna was varied between 1 and 4 meters. The peripherals were placed on the table in accordance with ANSI C63.4-1992. Both the horizontal and vertical field components were measured.

The emissions were measured using the following resolution bandwidths:

| Frequency Range | Resolution Bandwidth | Video Bandwidth |
|------------------------|-----------------------------|------------------------|
| 30MHz-1000 MHz | 100kHz | >100kHz |
| >1000 MHz | 1 MHz | 1MHz (peak) |

Emissions were measured to the 10th harmonic of the transmit frequency. The controller was tested in three orthogonal planes. Worst case emission levels are reported.

The following is a sample calculation used in the data tables for calculating the final field strength of spurious emissions and comparing these levels to the specified limits.

Sample Calculation:

Spectrum Analyzer Voltage (SA Level): V dB μ V

Antenna Factor (Ant Corr): AFdB/m

Cable Loss Correction (Cable Corr): CCdB

Duty Cycle Correction (Average) DCCdB

Amplifier Gain: GdB

Electric Field (Corr Level): $EdB\mu V/m = VdB\mu V + AFdB/m + CCdB + DCCdB - GdB$
