

RF Exposure Evaluation Declaration

- FCC ID: P27-SSS5R0
- Applicant: Sercomm Corporation
- Product: Smoke and Heat Detector
 - Smoke, CO and Heat Detector

Model No.: SSS5R0-29xxxxx, SSSX5R0-29xxxxx

(the 1st x should be "blank" or "-"; the rest x could be 0 to 9, A to Z, a to z, "blank" or "-", for the marketing purpose)

- Brand Name: ADT
- FCC Classification: Unlicensed PCS Base Station (PUB)
- FCC Rule Part(s): FCC Part 2.1091
- **Received Date** 2023-03-16

Reviewed By:

Approved By:

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standards through the calibration of the equipment and evaluated measurement uncertainty herein.

The test report shall not be reproduced except in full without the written approval of MRT Technology (Suzhou) Co., Ltd.

1.4. Product Information

| Product Name | Smoke and Heat Detector | | |
|---------------------|--|--|--|
| Product Name | Smoke, CO and Heat Detector | | |
| | SSS5R0-29xxxxx, SSSX5R0-29xxxxx | | |
| Model No. | (the 1st x should be "blank" or "-"; the rest x could be 0 to 9, A to Z, a to z, | | |
| | "blank" or "-", for the marketing purpose) | | |
| Serial No. | ADT | | |
| Antenna Information | Refer to section 1.6 | | |
| Working Voltage | Battery CR123A x 3 | | |
| Accessories | | | |
| Battery | Model: CR123A | | |
| | Output: 1500mAh | | |
| | | | |

Remark:

- 1. The information of EUT was provided by the manufacturer, and the accuracy of the information shall be the responsibility of the manufacturer.
- 2. The difference of models just marketing requirement, all of hardware and software are the same.
- The difference between SSS5R0-29 and SSSX5R0-29 is that SSSX5R0-29 has CO sensor more than SSS5R0-29. The RF function is not affected by CO sensor, so we chose SSSX5R0-29 to do RF testing.

1.5. Radio Specification

| Frequency Range | 1921.536 ~ 1928.448MHz | |
|---------------------------------|---|--|
| Channel Number | 5 RF Channels, 5*12 = 60 TDMA Duplex Channels | |
| Type of Modulation | GFSK | |
| Max. Number of timeslots | 24 | |
| Max. Number of active timeslots | 1 (full slot – 416.7μs, long slot – 694.4μs) | |

1.6. Antenna Details

| Antenna Type | Frequency Band (MHz) | T _x Paths | Max Antenna Gain (dBi) |
|--------------|-------------------------|----------------------|------------------------|
| PIFA | 1920 ~ 1930 | 1 | 2.65 |

1.7. Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the

following standards:

- FCC Part 2.1091
- KDB 447498 D04 Interim General RF Exposure Guidance v01

2. RF Exposure Evaluation

2.1. Test Limits

According to FCC §1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in §1.1307(b)

| Frequency Range | Electric Field | Magnetic Field | Power Density | Average Time | | | |
|-----------------|---|------------------------|------------------------|--------------|--|--|--|
| (MHz) | Strength (V/m) | Strength (A/m) | (mW/cm ²) | (Minutes) | | | |
| | (A) Limits fo | r Occupational/ Contro | l Exposures | | | | |
| 0.3-3.0 | 614 | 1.63 | *(100) | ≤6 | | | |
| 3.0-30 | 1842/f | 4.89/f | *(900/f ²) | <6 | | | |
| 30-300 | 61.4 | 0.163 | 1.0 | <6 | | | |
| 300-1,500 | | | f/300 | <6 | | | |
| 1,500-100,000 | | | 5 | <6 | | | |
| | (B) Limits for General Population/ Uncontrolled Exposures | | | | | | |
| 0.3-1.34 | 614 | 1.63 | *(100) | <30 | | | |
| 1.34-30 | 824/f | 2.19/f | *(180/f ²) | <30 | | | |
| 30-300 | 27.5 | 0.073 | 0.2 | <30 | | | |
| 300-1,500 | | | f/1500 | <30 | | | |
| 1,500-100,000 | | | 1.0 | <30 | | | |

LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

f= frequency in MHz. * = Plane-wave equivalent power density.

2.1. Test Exemptions

For single RF sources (i.e., any single fixed RF source, mobile device, or portable device, as defined in paragraph §1.1307(b)(2) of this section): A single RF source is exempt if:

(Option A) The available maximum time-averaged power is no more than 1 mW, regardless of separation distance. This exemption may not be used in conjunction with other exemption criteria other than those in paragraph §1.1307(b)(3)(ii)(A) of this section.

Medical implant devices may only use this exemption and that in paragraph §1.1307(b)(3)(ii)(A);

(Option B) Or the available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold P (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). P is given by:

$$P_{th} (mW) = \begin{cases} ERP_{20 cm} (d/20 cm)^{x} & d \le 20 cm \\ \\ ERP_{20 cm} & 20 cm < d \le 40 cm \end{cases}$$

Where

$$x = -\log_{10}\left(\frac{60}{ERP_{20} cm\sqrt{f}}\right)$$
 and f is in GHz;

and

$$ERP_{20\ cm}\ (\text{mW}) = \begin{cases} 2040f & 0.3\ \text{GHz} \le f < 1.5\ \text{GHz} \\ \\ 3060 & 1.5\ \text{GHz} \le f \le 6\ \text{GHz} \end{cases}$$

d = the separation distance (cm);

(Option C) Or using Table 1 and the minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. For the exemption in Table 1 to apply, R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of $\lambda/4$ or if the antenna gain is less than that of a half-wave dipole (1.64 linear value).

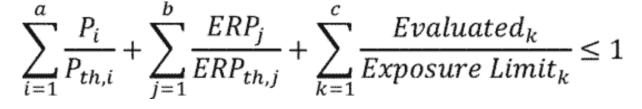

| RF Source Frequency (MHz) | Threshold ERP (watts) |
|---------------------------|------------------------------------|
| 0.3-1.34 | 1920R ² |
| 1.34-30 | 3450R ² /f ² |
| 30-300 | 3.83R ² |
| 300-1,500 | 0.0128R ² /f |
| 1,500-100,000 | 19.2R ² |

Table 1 to §1.1307(b)(3)(i)(C) - Single RF Sources Subject to Routine Environmental Evaluation

For multiple RF sources: Multiple RF sources are exempt if:

(A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required). This exemption may not be used in conjunction with other exemption criteria other than those is paragraph \$1.1307(b)(3)(i)(A) of this section. Medical implant devices may only use this exemption and that in paragraph \$1.1307(b)(3)(i)(A).

(B) in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

Where:

a = number of fixed, mobile, or portable RF sources claiming exemption using paragraph §1.1307(b)(3)(i)(B) of this section for P_{th} , including existing exempt transmitters and those being added.

b = number of fixed, mobile, or portable RF sources claiming exemption using paragraph §1.1307(b)(3)(i)(C) of this section for Threshold ERP, including existing exempt transmitters and those being added.

c = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.

 P_i = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or portable RF source *i* at a distance between 0.5 cm and 40 cm (inclusive).

 $P_{th,i}$ = the exemption threshold power (P_{th}) according to paragraph §1.1307(b)(3)(i)(B) of this section for fixed, mobile, or portable RF source *i*.

ERP_{*j*} = the ERP of fixed, mobile, or portable RF source *j*.

ERP_{th,j} = exemption threshold ERP for fixed, mobile, or portable RF source *j*, at a distance of at least $\lambda/2\pi$ according to the applicable formula of paragraph §1.1307(b)(3)(i)(C) of this section.

*Evaluated*_{*k*} = the maximum reported SAR or MPE of fixed, mobile, or portable RF source *k* either in the device or at the transmitter site from an existing evaluation at the location of exposure.

Exposure Limit_k = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source k, as applicable from §1.1310 of this chapter.

2.2. Test Result

| Product | Smoke and Heat CO Detector |
|-----------|----------------------------|
| Test Item | RF Exposure Evaluation |

| Test Mode | Frequency Band | Max Peak Power | Tune-up Peak Power | Duty Factor | Time-averaged Power |
|-----------|----------------|----------------|--------------------|-------------|---------------------|
| | (MHz) | (dBm) | (dBm) | (dB) | (dBm) |
| DECT | 1920 ~ 1930 | 19.98 | 20.50 | -13.8 | 6.7 |

Note:

- 1. The level of max peak power was from RF report 2303RSU035-U2.
- 2. Tune-up peak power declared by manufacturer.
- 3. Duty Factor = 10*Log(1/24) = -13.8
- 4. Max ERP is 7.20dBm.

For single RF source

| Frequency (MHz) | λ / 2 π (cm) | R (cm) | Option C (Watts) | Max ERP (Watts) |
|-----------------|--------------|--------|------------------|-----------------|
| 1920 ~ 1930 | 2.47 | 20 | 0.768 | 0.005 |

Note: R is from user manual.

CONCLUSION:

0.005W < 0.768W

Therefore, the device qualifies for RF exposure test exemption.
