### Copyright

This manual is an unpublished work and contains the trade secrets and confidential information of Neptune Technology Group Inc., which are not to be divulged to third parties and may not be reproduced or transmitted in whole or part, in any form or by any means, electronic or mechanical for any purpose, without the express written permission of Neptune Technology Group Inc. All rights to designs or inventions disclosed herein, including the right to manufacture, are reserved to Neptune Technology Group Inc.

The information contained in this document is subject to change without notice. Neptune reserves the right to change the product specifications at any time without incurring any obligations.

### Trademarks used in this manual

R900, ARB, ProRead, and E-Coder are registered trademarks of Neptune Technology Group Inc. Other brands or product names are the trademarks or registered trademarks of their respective holders.

### FCC Notice

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1 This device may not cause harmful interference,
- 2 This device must accept any interference received, including interference that may cause undesired operation.

Any Change or modification to the product is not expressly approved by Neptune and could void the user's authority to operate the device.

This equipment complies with the FCC radiation exposure limits set forth in an uncontrolled environment.

This equipment should be installed and operated with minimum distance 20cm between the equipment and the user's body.

**NOTE:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

# 1 Product Description

---

This section provides a general description of the Neptune Technology Group cellular meter interface unit (subsequently referred to as CMIU).

The CMIU by Neptune is a compact electronic device that collects meter reading data from an encoder register. It then transmits the data for collection. The collected data is stored and downloaded into the utility billing system for processing.

The CMIU is easily installed and operates within the cellular frequencies.

Figure 1 Cellular MIU

The CMIU does require field programming.

---

## Product Description

### CMIU Programming

The CMIU does require field programming.

### Low Battery Emissions

The CMIU stops RF transmissions when the battery discharges below normal the operating voltage.

## 2 Specifications

---

This section provides you with the specifications for the CMIU.

---

### Electrical Specifications

The power is supplied by a Lithium battery.

---

### Encoder Register Interface

#### Supported Encoder Maximum Cable Length

Neptune ARB® V <sup>1</sup>	300 feet (91 meters)
Neptune ProRead™ and E-Coder®	500 feet (152 meters)
Sensus Protocol registers	200 feet (61 meters)

<sup>1</sup> Meets manufacturer's published specifications for wire length between encoder and remote receptacle. The length is based on solid three conductor wire, 22 AWG.

---

### Specifications - CMIU

#### Environmental Conditions

Operating Temperature	-22° to 149°F (-30° to 65°C)
Storage Temperature	-40° to 158°F (-40° to 70°C)
Operating Humidity	0 to 100% Condensing

#### Functional Specifications

Register Reading	8 digits
MIU ID	10 digits

### 3 General Installation Guidelines

---

This section describes tools, materials, and general installation information for the CMIU.

---

#### Tools and Materials

Tables 1 and 2 show the recommended tools and materials you need to successfully install the CMIU.

It is possible that some items do not apply to your specific installation, or the list does not contain all required tools or materials.

Table 1 Recommended Tools

Item	Description/Recommendations	Use
Tool Kit	Contains standard tools including: <ul style="list-style-type: none"><li>• Assorted screwdrivers</li><li>• Needle-nose pliers</li><li>• Wire stripper</li><li>• Diagonal cutters</li><li>• Electrician's knife</li><li>• Hammer</li><li>• Crimping tool</li></ul> Part # 5500-158	Perform various installation procedures.
Magnet	6 lb. force Part # 12287-001	Activating the MIU.

**Table 2 Recommended Materials**

Item	Description/Recommendation	Use
Cable	Solid 3 conductor #22 AWG (black/green/red) Part # 6431-352	Connect MIU to encoder register.
Moisture Protection Compound	Novaguard sealant Part # 96018-072	Cover exposed wires and terminal screws on register and MIU.
Scotchlocks	Part # 8138-125	Connect wall MIU or replacement pit MIU to encoder register.
Site Work Order	Documentation provided by your utility	Receive and record information about the work site.

---

## Safety and Preliminary Checks

Observe the following safety and preliminary checks before and during each installation.

- Verify that you are at the location specified on the site work order.
- Verify that the site is safe for you and your equipment.
- Notify the customer of your presence and tell the customer that you need access to the water meter.
- Write in the ID number(s) of the MIU you are about to install, if the site work order does not have an MIU ID number.
- Verify that the ID number(s) matches the ID number(s) on the MIU you are about to install, if the site worker already has an MIU ID number.

---

## Verifying/Preparing the Encoder Register

The CMIU is designed for use with the following encoder registers:

- ARB V
- ProRead
- ProRead AutoDetect
- E-Coder
- Competitive registers using Sensus which include: Sensus ECR11, ICE, iPerl, OMNI and electronic register; also Hersey/Mueller Translator, Badger ADE, and HR E|LCD.

Before installing an MIU, the encoder register must be correctly wired and/or programmed to work with the MIU. E-Coder registers do not require programming.

When a ProRead encoder register is used, the non-AutoDetect ProRead register must be programmed for three-wire mode.

If connecting the MIU to a new ProRead encoder register, or if a three-conductor cable is already connected to a ProRead encoder register, ensure that the ProRead register is programmed for three-wire mode using the ProRead programmer and its RF/MIU 6, 8, or 10ID TDI format. This can be accomplished through the ProRead receptacle before removing the receptacle.

## Installation of a Register (Non Pre-Wired or Potted Only)

- 1 Before wiring the pit encoder register, make sure the cable is long enough. When the installation is complete, the pit lid can be removed easily without straining the cable.
- 2 Use only 22 AWG cable to make the connection from the encoder register to the MIU.
- 3 Remove the terminal screw cover from the encoder register.
- 4 Strip off  $\frac{3}{4}$  inch of jacket from the cable, leaving only the three insulated wires.
- 5 Take precautions not to nick or cut the insulation on the three wires, strip off  $\frac{1}{2}$  inch of insulation from each of the three wires.

Figure 2 Wiring a Neptune Encoder Register

Figure 3 MIU Color Code for Wires

- 6 If required, connect the three conductor wires to the encoder register's terminals per the manufacturer's instructions. See Figure 2 and Figure 3.
- 7 Thread the cable around the strain relief posts of the encoder. See Figure 4.

Figure 4 Cable Threaded Around Strain Relief Posts

- 8 Apply sealant liberally and ensure that it encapsulates the terminal screws and exposed wires. See Figure 5.

Neptune requires Novaguard G661 sealant or Dow Corning compound 4.

Figure 5 Application of the Sealant

Any leak point can cause a reading failure in a submerged meter setting.

- 9 Snap the cover onto the encoder register. See Figure 6.

Figure 6 Covering the Terminal Screws

- 10 Run the cable to the MIU and fasten it securely.

- Do not exceed maximum cable lengths as defined in "Specifications - CMIU" on page 2.
- If the encoder register is prewired and potted, use Scotchlocks for connecting the register to the MIU.

## 4 Wall Installation

---

This chapter provides instructions for installing the CMIU.

### Installing the Cellular MIU

#### Removing the Main Housing

Complete the following steps to install the wall MIU.

- 1 Remove the main housing from the mounting adapter.

Figure 7 Wall MIU Main Housing

The Hi-Lo fastener for securing the main MIU housing to the adapter plate is shipped separately.

- 2 Study Figure 8 and the location requirements, then decide how to install the MIU and mount the adapter with set screw positioned at bottom.

Figure 8 Mounting Adapter

A variety of holes in the mounting adapter allows for a quick and easy installation.

- The cable enters through the bottom or rear cable entry of the mounting adapter.
- When the MIU replaces a receptacle, use the appropriate holes to allow reuse of the receptacle's original mounting holes. See Figure 8.
- When mounting the MIU to a pipe, use the bolt hole for pipe mounting to bolt the mounting adapter to a pipe clamp.

## Applying the Scotchloks

Figure 9 Gel Cap Connections

- 1 Using Scotchloks Gel Caps, connect the register wires to the pigtail from the MIU. See Figure 9.
- 2 Pair the wires according to the color diagram in Figure 10.

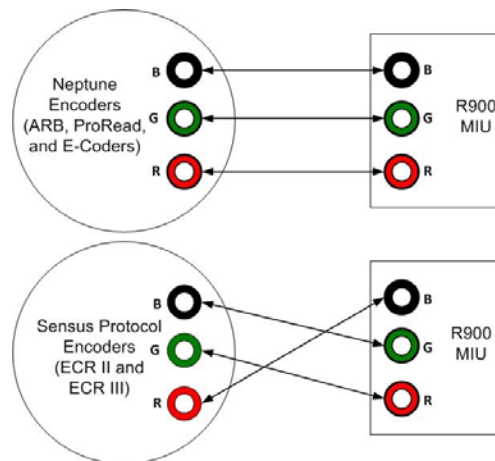

Figure 10 MIU Color Code for Wires

Figure 11 Cable in Back of Mounting Adapter

- 3 Slide the paired wires into the grooves provided until they seat into the back of the gel cap.
- 4 Using an appropriate crimping tool, firmly squeeze the gel cap to ensure a good connection.
- 5 Repeat this process until all connections are complete.
- 6 For rear cable entry, store excess wire and Scotchloks in the hollow cavity in the back of the MIU using the strain relief guides as shown in Figure 11.

- 7 Continue to guide the remaining wire through the cable exit notch at the bottom right side of the MIU as shown inFigure 12.

Figure 12 Cable Exit Notch

### Activating and Completing the Installation

- 1 Slide the tongue on the top of the MIU into the groove on the top of the mounting adapter.
- 2 Secure the MIU to the mounting adapter using the set screw. SeeFigure 13.

Figure 13 Securing Mounting Adapter

- 3 Position the magnet against the left side of the MIU directly in line with the Neptune logo, and swipe it bringing it from the side and around the corner to the top to activate the MIU. SeeFigure 14.

Figure 14 Activating the MIU

## 5 Contact Information

---

Within North America, Neptune Customer Support is available Monday through Friday, 7:00 AM to 5:00 PM Eastern Standard Time by telephone, email, or fax.

---

### By Phone

To contact Neptune Customer Support by phone, complete the following steps.

- 1 Call (800) 647-4832.
- 2 Select one of the following options:
  - Press **1** if you have a Technical Support Personal Identification Number (PIN).
  - Press **2** if you do not have a Technical Support PIN.
- 3 Enter the six-digit PIN number and press #.
- 4 Select one of the following options.
  - Press **2** for Technical Support.
  - Press **3** for maintenance contracts or renewals.
  - Press **4** for Return Material Authorization (RMA) for Canadian Accounts.

You are directed to the appropriate team of Customer Support Specialists. The specialists are dedicated to you until the issue is resolved to your satisfaction. When you call, be prepared to give the following information.

- Your name and utility or company name.
- A description of what occurred and what you were doing at the time.
- A description of any actions taken to correct the issue.

---

### By Fax

To contact Neptune Customer Support by fax, send a description of your problem to (334) 283-7497. Please include on the fax cover sheet the best time of day for a Support Specialist to contact you/

---

### By Email

To contact Customer Support by email, send your email message to [hhsupp@neptunetg.com](mailto:hhsupp@neptunetg.com).
