FCC ID: P2SR450

To Whom It May Concern:

This is to notify you of changes to Neptune's certificated transceiver. The following changes were made to improve the receiver sensitivity, reduce in band, and out of band noise caused by internal digital emissions.

They improved the ground plane and added extra layers to the PCB to reduce digital noise, and then added a SAW filter to the front end of the receiver. They believe that none of these actions adversely affected any previously reported data and believe it if anything improve them.

Sincerely,

Mario de Aranzeta
