**Exhibit of Confidentiality**

To Whom It May Concern:

Arrista Technologies would like the following submitted exhibits treated as confidential material:

1. Amplifier Schematic
2. Block Diagram Amplifier
3. Amplifier Parts Listing
4. Internal Photos of the Amplifier
5. Operational Description

The amplifier design, specifically, the gain control circuitry is of novel design and a US patent has been filed on it. As there is no other amplifier design that incorporates the gain control function the way the SG800 does, we believe that we have a competitive advantage over competing designs out in the market place.
