Exhibit of Confidentiality

To Whom It May Concern:

Arrista Technologies would like the following submitted exhibits treated as confidential material:

1. Amplifier Schematic
2. Block Diagram Amplifier
3. Amplifier Parts Listing
4. **Internal Photos of the Amplifier_** Amendment 1
5. Operational Description

The amplifier design, specifically, the gain control circuitry is of novel design and a US patent has been filed on it. As there is no other amplifier design that incorporates the gain control function the way the SG800 does, we believe that we have a competitive advantage over competing designs out in the market place.
