P3H-SIRPNP4\_Manual(R).pdf

Dear Ms. Helen,

Question #1: The user manual (page 20) said "5. Use the Rotary Knob and Category Buttons to adjust the FM frequency. The Rotary Knob adjusts in 0.1 MHz increments...", but the test report and operational description said step frequency is 0.2MHz. Please verify which one is correct.

Attached please find the revised manual (for step frequency). The report and operational description are correct.

If you have any question, please feel free to contact us.

Best Regards,  
S. C. Hong / Project Engineer
