DH440-HG-SCH-3 - Signal Amplifier User & Installation Manual

## **Document History**

Description	Revision	Date Issued
Original	1.0	June 1 <sup>st</sup> , 2015
Update SAR values	2.0	July 20 <sup>th</sup> , 2017

## About this manual

This manual describes installation, commissioning, operation and maintenance of Fiplex DH440-HG-SCH Signal Amplifier, and *Fiplex Control Software* (FCS). The first part of the manual describes the Signal Amplifier hardware and the second part describes the software.

Hardware and software mentioned in this manual are subjected to continuous development and improvement. Consequently, there may be minor discrepancies between the information in the manual and the performance and design of the hardware and software. Specifications, dimensions and other statements mentioned in this manual are subject to change without notice.

This manual or parts of it may not be reproduced without the written permission of Fiplex Communications Inc. Infringements will be prosecuted. All rights reserved. Copyright © Fiplex Communications Inc, Miami, 2017.

## **Exposure Statement**

ATTENTION: This unit has a maximum output power of +40dBm +/- 2dBm, therefore the gain of the antenna should be of 0dBi or less and maintain a minimum separation of 52 cm from all persons to comply with SAR and/or RF field strength limits.

## Part 1 HARDWARE

## 1. Safety

#### Caution!

This manual lists a set of rules and warnings to be accomplished when installing, commissioning and operating a DH440-HG-SCH-3 Signal Amplifier from FIPLEX. Any omission may result in damage and/or injuries to the Amplifier and/or the Amplifier Operators or Users.

If an instruction is not clear or you consider is missing, please contact immediately to Fiplex. See www.fiplex.com for contact information.

#### **Dangerous Voltage Warning**

Any personnel involved in installation, operation or service of this equipment must understand and obey the following:

The power supply unit supplied from the main power contains dangerous voltage level, which can cause electric shock. Switch the main power off prior to any work in such equipment. Any local regulations are to be followed when servicing Signal Amplifiers. Authorized service personnel only are allowed to service Signal Amplifiers while the main is switched on.

#### **R&TTE Compliance Statement**

This equipment complies with the appropriate essential requirements of Article 3 of the R&TTE Directive 1999/5/EC.

## Station Ground

Signal Amplifiers, feeders, donor antenna, service antenna/s and auxiliary equipment (splitters, tabs, etc.) are required to be bonded to protective grounding using the bonding stud or screw provided with each unit.

#### Electrostatic Discharge

Static electricity means no risk of personal injury but it can severely damage essential parts of the Signal Amplifier, if not handled carefully.

Parts on the printed circuit boards as well as other parts in the Signal Amplifier are sensitive to electrostatic discharge.

## Never touch printed circuit boards or uninsulated conductor surfaces unless absolutely necessary.

If you must handle printed circuit boards or uninsulated conductor surfaces, use ESD protective equipment, or first touch the Signal Amplifier chassis with your hand and then do not move your feet on the floor. Never let your clothes touch printed circuit boards or uninsulated conductor surfaces.

#### **Disposal of Electric and Electronic Waste**

Pursuant to the WEEE EU Directive electronic and electrical waste must not be disposed of with unsorted waste. Please contact your local recycling authority for disposal of this product.

## 2. Product Description.

The DH440-HG-SCH-3 Signal Amplifier are single channel amplifiers that operates in the frequency of 506-511MHz band for United States.

This Signal Amplifiers amplifies the RF signal of a Base Station or Transmitter equipment without the need of a previous amplification (driver, power amplifier).

The system receives the BTS or Transmitter signal to be amplified, filters, amplifies and re-radiates through the connected antenna/s.

This signal amplifier is capable of handling one single channel, narrow band. It is not intended to be used as a multiple carrier signal amplification. The channel BW and frequency position can be tuned via a software interface.

The intermediate filtering of this equipment is performed using FPGA filtering technology and, among many, it has the following features:

- High Selectivity.
- Channel filter BW selection.

This Signal Amplifier has a compact heavy duty 2 RU cabinet for indoor usage.

## 3. Ports

## 4. Commissioning

1. Connect RF IN and RF OUT. N type female connectors are used in the Signal Amplifier.

2. Once RF ports of the Signal Amplifier are properly loaded connect the DC port. Electrical installation must provide differential and termo-magnetic breaker elements according to electric safety international regulations.

- 3. Signal Amplifier chassis must be properly DC grounded.
- 4. Turn ON DC power.

5. Once the Signal Amplifier has been powered, it takes about 20 seconds to run a booting routine. After that time Signal Amplifier is ready to be connected via USB cable to a computer running FCS Software in order to be properly configured. See **Part 2 Software** of this manual to install FCS.

5. Starting Operation

## BE SURE THAT BOTH RF PORTS ARE PROPERLY LOADED EITHER WITH 50 OHMS DUMMY LOADS, OR RADIATING SYSTEMS.

- 1. Turn on the Signal Amplifier, connect computer to Signal Amplifier through USB cable, and run Fiplex Control Software.
- 2. Setup desired channel frequency. Since Signal Amplifier is a single channel device, user has to know what frequency is used in Base Station or Transmitter.

## Part 2 SOFTWARE

#### 1. Introduction

Fiplex Signal Amplifier can be fully configured and monitored in local and remote mode.

- Local mode:
  - USB port with Windows desktop application
- Remote mode:
  - Remote Web server

In following section, each control mode (configuration / monitoring) are described.

## 2. Local Software. Desktop application through USB port

### 2.1. Installation

The following section will describe the steps to be followed in order to install and use the Fiplex Control software with your Fiplex Signal Amplifier.

1. Before connect USB cable between computer and Signal Amplifier, run the FiplexControlSoftware.msi File. Next screen will appear...

2. Choose the default installation path "C:\Program Files (x86)\FiplexControlSoftware". Note that this can change according to your system configuration (32bits or 64bits), language and Windows Version.

Select Installation Folder       Image: ControlSoftware in the following folder.         The installer will install Fiples/ControlSoftware in the following folder.       To install in this folder, click "Next". To install to a different new or existing folder, enter one below or click "Browse".         Eolder:       C:\Program Files (x86)\Fiples/ControlSoftware\       Browse         You can install the software on the following drives:       Volume       Disk (C)         Volume       21       21         Image: Y:       43 m	闄 FiplexControl	Software	
To install in this folder, click "Next". To install to a different new or existing folder, enter one below or click "Browse". <u>Fo</u> lder: C:\Program Files (x86)\FiplexControlSoftware\ <u>Browse</u> You can install the software on the following dives: Volume <u>Disk</u> C: 21	Select Ins	tallation Folder	fipleX
below or click "Browse".       Folder:     C:\Program Files (x86)\FiplexControlSoftware\       You can install the software on the following drives:       Volume       Disk ^       C:     21	The installer w	ill install FiplexControlSoftware in the following folder.

5. Connect USB cable between computer and Signal Amplifier, keeping the Signal Amplifier powered off. Usually, drivers will be automatically installed, but depending on Windows version, screen asking for drivers of new device can appear. Drivers can be found in application folder: C:\Program Files (x86)\FiplexControlSoftware\drivers".

3	Actualizar software de controlador: USB Serial Port (COMB)
	Busque software de controlador en el equipo
I	Buscar el software de controlador en esta ubicación:
	C\Program Files (x86)\FiplexControlSoftware\drivers v Egaminar Incluir subcarpetas
	Elegir en una lista de controladores de dispositivo en el equipo Esta lista mostrará el software de controlador instalado compatible con el dispositivo y todo el software de controlador que esté en la misma categoría que el dispositivo.
	Siguiențe Cancelar

6. Turn on the Signal Amplifier

# BE SURE THAT RF PORTS ARE PROPERLY LOADED EITHER WITH 50 OHMS DUMMY LOADS, OR RADIATING SYSTEM.

7. Execute the Fiplex Control Software. Next window will appear:

Fiplex Control Software     Eile About	
Scan devices Connect	•
	fiplex®
Fiplex Control Software	
Version 1.0.0.3	
Copyright 2005-2015. Fiplex Communications Inc.	<b>z</b>

User interface controls:

- Scan Devices Button: refresh the available COM ports and identify Fiplex devices
- Connection Button: connect / disconnect software from Signal Amplifier
- List of available devices: below two buttons, is placed a dropdown list that shows all available COM
  ports. Available COM ports not related to Fiplex Signal Amplifier will be shown with its number and
  "Unknown device" label. COM ports related to Fiplex Signal Amplifier will show a device description.
- Embedded Web browser: graphical area where configuration and monitoring parameters will be shown.

• File menu: contains menus to save Signal Amplifier configuration to a file and load configuration from file to Signal Amplifier.

NOTE: if Fiplex Signal Amplifier is not turned on, related COM port will appear as "Unknown device"

8. Click "Scan Devices"

Fiplex Control Software	
<u>File</u> <u>A</u> bout	
Scan devices Connect	
COM19 - Digital Channel Selective Repeater 12 Channels	
	fipleX®
Fiplex Control Software Version 1.0.0.3	
Copyright 2005-2015. Fiplex Communications Inc.	

Now, the Fiplex Digital Signal Amplifier is shown in the list of available devices, and connection button is enabled.

NOTE: Fiplex Signal Amplifier could not appear in list, if COM port number is higher than COM16, depending on Windows version. COM port number can be forced to arbitrary number (below COM16) through Device Administrator. In order to change COM number, click "Properties" pop-up menu:

10. Once Signal Amplifier is configured, user can disconnect software using connection button, now labelled "Disconnect". Initial window will be shown.

If Signal Amplifier is disconnected or turned off, while Fiplex Control Software is connected to device, software will go back to initial window. Moreover, if some communication problem occurs while device is monitored, the software will go back to initial state as well.
