RE: Application Dismissal

Application Received: 2009-03-27
Equipment Class: PCB-PCS Licensed Transmitter
Applicant Name: AnyData Corporation
FCC ID: PM4-AP500N
TCB Name: Bay Area Compliance Laboratory Corp.
731 Confirmation Number: TC206206

To Whom It May Concern:

Originally, 3 laptops were selected for SAR testing, the host with the highest SAR (1.41 W/Kg) reported was an ASUS (Model: A9T), the PCMCIA slot was located closest to the keyboard panel and the front side of EUT was touching the flat phantom, and the SAR was investigated with the laptop back touching the phantom, however, in this configuration, the distance between EUT and phantom was more than 1 cm which was not in accordance with the requirement of KDB 447498 D01 item 2) b) i) 3).

We have re-tested SAR using one laptop, with the distance between the EUT and the flat phantom being 9 mm which is less than 1cm. The highest SAR values reported were 0.831 W/Kg which are below 1.2 W/Kg and allows a TCB to certify.

We have also updated Form 731 with one equipment class (PCB) which includes Part 24E and Part 90.

Please advise us if we can do anything else to clarify this situation and do not hesitate to give us a call. We are at your service.

Best Regards,
