

Information about FCC 24.237 Interference Protection and FCC 22.915(a) Modulation Characteristics

FCC 24.237 is for PCS Base Station, not related to CDMA data modem.

FCC 22.915(a) Modulation Characteristics is for Analogue telecommunication service (ex: AMPS)

Our CDMA data modem uses CDMA digital telecommunication service, and so all the voice and data information is digitized and transmit/receive the information by code. So, we don't use the voice modulation in our CDMA data modem.
