Request for a modular approval - FCC ID: P4U-VRTS

Dear Application Examiner,

The Kar-Tech, Inc. Versa Remote Transmitter Module Model: VRTS is seeking FCC authorization as a modular transmitter. The requirement of the FCC Public notice DA00-1407 are met.

The following requirements are fulfilled:

1. The modular transmitter must have its own RF shielding

The radio portion of the module is contained in its own RF shielding. See the external photos.

2. The modular transmitter must have buffered modulation/data inputs

There is a microprocessor on the board that collects the information from the digital data collection module and sends this stream to the RF transmitter.

3. The modular transmitter must have its own power supply regulation

The board used in this module includes its own 3.3 volt regulator on the main processor for regulating the power to the transmitter so regulation is not a problem.

4. The modular transmitter must comply with the antenna requirements of Section 15.203

The antenna is a reverse polarity SMA connector. The antenna will be provided with each module.

5. The modular transmitter must be tested in a stand-alone configuration

The EUT was tested in a stand-alone configuration. The controller board that it is connected to is for collection of data only.

6. The modular transmitter must be labeled with its own FCC ID number

The EUT will be labeled with its own FCC ID number. If the module is installed inside of an end-product, the label will not be visible. In this case the OEM customer will be instructed to how to apply the exterior label.

7. The modular transmitter must comply with any specific rule or operating requirements applicable to the transmitter and the manufacturer must provide adequate instructions along with the module to explain any such requirements.

The EUT is compliant with all applicable FCC rules. Detail instructions are given in the Users Guide.
