

B. Manual mode

If you find the communication channel does not connect well, you can use the software connection tool to re-connect the mouse & receiver to reset a new channel ID. You are able to get the software from the included diskette of the package or download from your local brand vendor's website.

Note

- ▶ While the mouse is working, if encountering any interference, the mouse and the receiver will automatically source out and transfer to another free channel. During the transferring, the cursor movement may have a second delay.

4. Operation

• Resolution

You could press the left and right button of the mouse at same time to switch between 800 dpi /1600 dpi.

5. Replace the new batteries

When the battery is low power, the red LED will be flashed. Please replace a pair of new batteries and follow the previous instructions. (2, 3)

Note

- ▶ The red LED on the scroll bar of the mouse is a low batteries power indicator. It indicates that batteries inside the mouse need to be replaced.

⊗ Trouble Shooting

- Make sure you have connected the receiver correctly to the computer's USB port.
- For the best performance, we suggest you to locate the receiver with a distance from other electrical devices, such as the computer, the computer monitor or external storage drives.
- Make sure you have set the communication between the receiver and the mouse. Refer to the Communication (The mouse and the receiver).
- If you find the communication channel does not connect well. You can use the software connection tool to re-connect the mouse & receiver to reset a new channel ID. You are able to get the software from the included diskette of the package or download from your local brand vendor's website.
- Make sure that you are not working the mouse on glossy or reflective surfaces.
- Try unplugging then reconnecting the receiver cable to your computer.

⊗ Battery use reminders

- Remove worn-out batteries from equipment immediately and dispose of promptly.
- Keep all batteries (used or new) out of the reach of children.
- To have the batteries with a regular check and replace new batteries if the mouse has not been used for a long time.
- Never dispose of batteries in fire, as they could explode.
- Always replace all the batteries at the same time. Mixing old and new batteries will reduce overall performance and could cause leakage or rupture.
- Do not mix different types of batteries (e.g. Ni MH, NiCd, alkaline, and etc.) in the mouse.
- Remove batteries from the electrical device if the device is not going to be used for a long time.
- If the performance of the batteries decreases substantially, it is time to replace the batteries.

FCC statement

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation if this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

To assure continued compliance, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. (Example-use only shielded interface cables when connecting to computer or peripheral devices).

FCC Radiation Exposure Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) This device must accept any interference received, including interference that may cause undesired operation.

The Wireless Channel sets the radio frequency used for communication.

- Access Points use a fixed Channel. You can select the Channel used. This allows you to choose a Channel which provides the least interference and best performance. In the USA and Canada, 11 channels are available. If using multiple Access Points, it is better if adjacent Access Points use different Channels to reduce interference.
- In "Infrastructure" mode, Wireless Stations normally scan all Channels, looking for an Access point. If more than one Access Point can be used, the one with the strongest signal is used. (This can only happen within an ESS.) If using "Ad-hoc" mode (no Access Point), all Wireless stations should be set to use the same Channel. However, most Wireless stations will still scan all Channels to see if there is an existing "Ad-hoc" group they can join.
